Digital innovation in citizen science to enhance water quality monitoring in developing countries Pattinson, N. B.,Taylor, J.,Dickens, Chris W. S.,Graham, P. M.,2023-12-31 Freshwater systems are disproportionately adversely affected by the ongoing global environmental crisis The effective and efficient water resource conservation and management necessary to mitigate the crisis requires monitoring data especially on water quality This is recognized by Sustainable Development Goal SDG 6 particularly indicator 6.3.2 which requires all UN member states to measure and report the proportion of water bodies with good ambient water quality However gathering sufficient data on water quality is reliant on data collection at spatial and temporal scales that are generally outside the capacity of institutions using conventional methods Digital technologies such as wireless sensor networks and remote sensing have come to the fore as promising avenues to increase the scope of data collection and reporting Citizen science which goes by many names e.g participatory science or community based monitoring has also been earmarked as a powerful mechanism to improve monitoring However both avenues have drawbacks and limitations The synergy between the strengths of modern technologies and citizen science presents an opportunity to use the best features of each to mitigate the shortcomings of the other This paper briefly synthesizes recent research illustrating how smartphones sometimes in conjunction with other sensors present a nexus point method for citizen scientists to engage with and use sophisticated modern technology for water quality monitoring This paper also presents a brief non exhaustive research synthesis of some examples of current technological upgrades or innovations regarding smartphones in citizen science water quality monitoring in developing countries and how these can assist in objective comprehensive and improved data collection management and reporting While digital innovations are being rapidly developed worldwide there remains a paucity of scientific and socioeconomic validation of their suitability and usefulness within citizen science This perhaps contributes to the fact that the uptake and upscaling of smartphone assisted citizen science continues to underperform compared to its potential within water resource management and SDG reporting Ultimately we recommend that more rigorous scientific research efforts be dedicated to exploring the suitability of digital innovations in citizen science in the context of developing countries and SDG reporting

Leadership Approaches to the Science of Water and Sustainability Tardif, Kristin Joyce,2022-08-19 Water is the life source of all living things on our planet By honoring our environment and realizing the importance of our great resources we not only restore our natural world but we also create a sustainable planet and quality of life we so desperately need Many do not have access to pure clean water In addition natural disasters temporarily alter water systems and make them undrinkable and as we look for healthy on the go alternatives many have turned to bottled water This is one of the many issues involving water science and environmental sustainability Leadership Approaches to the

Science of Water and Sustainability highlights the many issues with water and sustainability. It details the lengths one goes to find, develop and protect natural resources and highlights the scientists, state and government agencies who work tirelessly to protect our great natural resources. Covering topics such as environmental law, the history of water and water science, this premier reference source is a dynamic resource for government officials, conservationists, environmental engineers, agricultural scientists, environmental scientists, non-profit organizations, students and faculty of higher education, researchers and academicians.

An Introduction to Water Quality Science Sourav Das, 2023-09-25. This book discusses the significance of water quality parameters in aquatic ecosystems, offering a concise and practical measurement methodology for early career researchers and post graduate students in the fields of environmental science, oceanography and aquatic science. The key topics covered include aquatic sampling basics, physicochemical properties and carbonate chemistry of aquatic science, the importance of nutrients in natural water bodies, biological productivity in aquatic ecosystems, aquatic pollution and statistical analyses of different types of water science data. Several parameters such as microplastics, dimethylsulfoniopropionate and polychlorinated biphenyls have also been incorporated in the book for comprehensive coverage of the topic. The book is meant as a practical guide for beginners and young researchers, using a clear writing style and practical examples highlighting the significance of water science parameters and their measurement protocols in aquatic environments.

Water System Science and Policy Interfacing Philippe Quevauviller, 2010. Recent discussions among scientists and policy makers have highlighted that knowledge generated by many research and demonstration projects is not reaching policymakers in an efficient way. Conversely, the consideration of research results by the policy making community is not straightforward and difficulties arise in integrating the latest research developments in legislation. The difficulty is enhanced by the fact that the policy making community is not defining its role as client sufficiently well and the dialogue and communication channels are far from ideal to ensure an efficient flow of information. An increasing number of experts consider that improvements could be achieved through the development of a science policy interface so that R D results are synthesised in a way to efficiently feed policy implementation and that short, medium and long term research needs may be identified. This book examines the issue of integrating science into policy with an emphasis on water system knowledge and related policies. An important feature of the book is the discussion of science policy interfacing needs illustrated by examples from authors from different countries in relation to water system management. This publication is timely in that the science policy interfacing is now identified as a key challenge worldwide with regard to integrated water resource management and therefore the book will be of great interest to scientists, water managers and stakeholders. Readers will also benefit from a

better understanding of the needs benefits and drawbacks of an established transfer mechanism of scientific outputs to policies *GIS and Geocomputation for Water Resource Science and Engineering* Barnali Dixon,Venkatesh Uddameri,2015-11-25 GIS and Geocomputation for Water Resource Science and Engineering not only provides a comprehensive introduction to the fundamentals of geographic information systems but also demonstrates how GIS and mathematical models can be integrated to develop spatial decision support systems to support water resources planning management and engineering The book uses a hands on active learning approach to introduce fundamental concepts and numerous case studies are provided to reinforce learning and demonstrate practical aspects The benefits and challenges of using GIS in environmental and water resources fields are clearly tackled in this book demonstrating how these technologies can be used to harness increasingly available digital data to develop spatially oriented sustainable solutions In addition to providing a strong grounding on fundamentals the book also demonstrates how GIS can be combined with traditional physics based and statistical models as well as information theoretic tools like neural networks and fuzzy set theory World Scientific Reference Of Water Science, The (In 3 Volumes) ,2022-09-16 Water is an indispensable resource for our society Essential to sustaining life and economic prosperity water is also the basic component for manufacturing almost everything to keep society alive including energy food clothing cars and electronics among many other examples It is thus an integral part of our lives beyond simply quenching our thirst In addition our future economy and security highly depend upon the availability of clean water Yet given its critical importance there is a limited supply of renewable freshwater across the globe and there is no substitute Global population and economic growth urbanization and climate change further exacerbate the increasing stress on freshwater supplies As such society urgently needs to find the scientific and engineering solutions to more efficiently manage our precious water resources The volumes of this multi volume reference cover the latest scientific advancements and solutions in managing and treating this crucial resource Related Link s **Water Science & Technology in China: A Roadmap to 2050** Changming Liu,Yi Wang,Mingan Shao,Xiyong Hou,2012-03-02 As one of the eighteen field specific reports comprising the comprehensive scope of the strategic general report of the Chinese Academy of Sciences this sub report addresses long range planning for developing science and technology in the field of water science They each craft a roadmap for their sphere of development to 2050 In their entirety the general and sub group reports analyze the evolution and laws governing the development of science and technology describe the decisive impact of science and technology on the modernization process predict that the world is on the eve of an impending S T revolution and call for China to be fully prepared for this new round of S T advancement Based on the detailed study of the demands on S T innovation in China s modernization the reports draw a framework for eight basic and strategic systems of socio economic development with the support of science and technology work out China s S T roadmaps for the relevant eight basic and strategic systems in line with China s reality further detail S T initiatives of strategic importance to China s modernization
