Spector,T.M. Anderson,2005-12-17 One outcome of recent progress in educational technology is strong interest in providing effective support for learning in complex and ill structured domains We know how to use technology to promote understanding in simpler domains e g orientation information procedures with minimal branching etc but we are less sure how to use technology to support understanding in more complex domains e g managing limited resources understanding environmental impacts etc Such domains are increasingly significant for society Technology e g collaborative tele learning digital repositories interactive simulations etc can provide conceptually and functionally rich domains for learning However this introduces the problem of determining what works in which circumstances and why Research and development on these matters is reflected in this collection of papers This research suggests a need to rethink foundational issues in educational

philosophy and learning technology One major theme connecting these papers is the need to address learning in the large from a more holistic perspective A second theme concerns the need to take learners where and as they are integrating technology into effective learning places Significant and systematic progress in learning support for complex domains demands further attention to these important issues
