Sciences And Cultures:

Science and Other Cultures Sandra Harding, Robert Figueroa, 2013-10-31 In this pioneering new book Sandra Harding and Robert Figueroa bring together an important collection of original essays by leading philosophers exploring an extensive range of diversity issues for the philosophy of science and technology The essays gathered in this volume extend current philosophical discussion of science and technology beyond the standard feminist and gender analyses that have flourished over the past two decades by bringing a thorough and truly diverse set of cultural racial and ethical concerns to bear on questioning in these areas Science and Other Cultures charts important new directions in ongoing discussions of science and technology and makes a significant contribution to both scholarly and teaching resources available in the field *Cultures of Prediction in Atmospheric and Climate Science* Matthias Heymann, Gabriele Gramelsberger, Martin Mahony, 2017-06-26 In recent decades science has experienced a revolutionary shift The development and extensive application of computer modelling and simulation has transformed the knowledge making practices of scientific fields as diverse as astro physics genetics robotics and demography This epistemic transformation has brought with it a simultaneous heightening of political relevance and a renewal of international policy agendas raising crucial questions about the nature and application of simulation knowledges throughout public policy Through a diverse range of case studies spanning over a century of theoretical and practical developments in the atmospheric and environmental sciences this book argues that computer modelling and simulation have substantially changed scientific and cultural practices and shaped the emergence of novel cultures of prediction Making an innovative interdisciplinary contribution to understanding the impact of computer modelling on research practice institutional configurations and broader cultures this volume will be essential reading for anyone interested in the past present and future of climate change and the environmental sciences *The Routledge Handbook of Language and Culture* Farzad Sharifian, 2014-12-17 The Routledge Handbook of Language and Culture presents the first comprehensive survey of research on the relationship between language and culture It provides readers with a clear and accessible introduction to both interdisciplinary and multidisciplinary studies of language and culture and addresses key issues of language and culturally based linguistic research from a variety of perspectives and theoretical frameworks This Handbook features thirty three newly commissioned chapters which cover key areas such as cognitive psychology cognitive linguistics cognitive anthropology linguistic anthropology cultural anthropology and sociolinguistics offer insights into the historical development contemporary theory research and practice of each topic and explore the potential future directions of the field show readers how language and culture research can be of practical benefit to applied areas of research and practice such as intercultural communication and second language teaching and learning Written by a group of prominent scholars from around the globe The Routledge Handbook of Language and Culture provides a vital resource for scholars and students working in this area *Studies on Ammonification in Soils by Pure Cultures* Charles Bernard Lipman, Paul Steere

Burgess,1914 *A Cultural History of Modern Science in China* Benjamin A. Elman,2009-07-01 In *A Cultural History of Modern Science in China* Elman has retold the story of the Jesuit impact on late imperial China circa 1600 1800 and the Protestant era in early modern China from the 1840s to 1900 in a concise and accessible form ideal for the classroom

Breaking Images Brian Greer,David Kollosche,Ole Skovsmose,2024-12-11 Mathematics is an activity something we do not just something inert that we study This rich collection begins from that premise to explore the various social influences institutional forces and lived realities that shape and mould the study and practice of mathematics and are moulded by it in turn These twenty one essays explore questions of mathematics as a topic of philosophy but also the nature and purpose of mathematics education and the role of mathematics in moulding citizens It challenges the biases and prejudices inherent within uninformed histories of mathematics including problems of white supremacy the denial of cultural difference and the global homogenization of teaching methods In particular the book contrasts the effectiveness of mathematics and science in modelling physical phenomena and solving technical problems with its ineffectiveness in modelling social phenomena and solving human problems and urges us to consider how mathematics might better meet the urgent crises of our age The book addresses anybody who is interested in reflecting on the role of mathematics in society from different perspectives It allows mathematicians to ponder about the cultural connections of mathematics and provides new perspectives for philosophical sociological and cultural studies of mathematics Because of the book s emphasis on education in mathematics it is especially interesting for mathematics teachers and teacher educators to challenge their understanding of the subject [Library of Congress Subject Headings](#) Library of Congress,2003 [Journal of the Boston Society of Medical Sciences](#) ,1905 *The American Journal of the Medical Sciences* ,1889 *Cultural Science* John Hartley,Jason Potts,2014-09-25 This book is available as open access through the Bloomsbury Open Access programme and is available on www.bloomsburycollections.com Cultural Science introduces a new way of thinking about culture Adopting an evolutionary and systems approach the authors argue that culture is the population wide source of newness and innovation it faces the future not the past Its chief characteristic is the formation of groups or demes organised and productive subpopulation demes Demes are the means for creating distributing and growing knowledge However such groups are competitive and knowledge systems are adversarial Starting from a rereading of Darwinian evolutionary theory the book utilises multidisciplinary resources Raymond Williams s culture is ordinary approach evolutionary science e g Mark Pagel and Herbert Gintis semiotics Yuri Lotman and economic theory from Schumpeter to McCloskey Successive chapters argue that Culture and knowledge need to be understood from an externalist linked brains perspective rather than through the lens of individual behaviour Demes are created by culture especially storytelling which in turn constitutes both politics and economics The clash of systems including demes is productive of newness meaningfulness and successful reproduction of culture Contemporary urban culture and citizenship can best be explained by investigating how culture is used and how newness and innovation emerge from unstable and

contested boundaries between different meaning systems The evolution of culture is a process of technologically enabled demographic concentration of knowledge across overlapping meaning systems or semiospheres a process where the number of domains accessible to any individual has increased at an accelerating rate resulting in new problems of scale and coordination for cultural science to address The book argues for interdisciplinary consilience linking evolutionary and complexity theory in the natural sciences economics and anthropology in the social sciences and cultural communication and media studies in the humanities and creative arts It describes what is needed for a new modern synthesis for the cultural sciences It combines analytical and historical methods to provide a framework for a general reconceptualisation of the theory of culture one that is focused not on its political or customary aspects but rather its evolutionary significance as a generator of newness and innovation Beyond Relativism Robert C. Hunt, 2007-03 This important book tackles the problem of comparing phenomena social roles forms of activities institutions across cultures
