Shores of Knowledge: New World Discoveries and the Scientific Imagination Joyce Appleby, 2013-10-14 Uncommonly good makes a compelling case that intellectual curiosity not only changed Europe but launched modernity Cleveland Plain Dealer When Columbus first returned to Spain from the Caribbean he dazzled King Ferdinand and Queen Isabella with exotic parrots tropical flowers and bits of gold Inspired by the promise of riches countless seafarers poured out of the Iberian Peninsula and wider Europe in search of spices treasure and land Many returned with strange tales of the New World Curiosity began to percolate through Europe as the New World's people animals and plants ruptured prior assumptions about the biblical description of creation The Church long fearful of challenges to its authority could no longer

suppress the mantra Dare to know Noblemen began collecting cabinets of curiosities soon others went from collecting to examining natural objects with fresh eyes Observation led to experiments competing conclusions triggered debates The foundations for the natural sciences were laid as questions became more multifaceted and answers became more complex Carl Linneaus developed a classification system and sent students around the globe looking for specimens Museums botanical gardens and philosophical societies turned their attention to nature National governments undertook explorations of the Pacific Eminent historian Joyce Appleby vividly recounts the explorers triumphs and mishaps including Magellan s violent death in the Philippines the miserable trek of the new Argonauts across the Andes on their mission to determine the true shape of the earth and how two brilliant scientists Alexander Humboldt and Charles Darwin traveled to the Americas for evidence to confirm their hypotheses about the earth and its inhabitants Drawing on detailed eyewitness accounts Appleby also tells of the turmoil created in the all societies touched by the explorations This sweeping global story imbues the Age of Discovery with fresh meaning elegantly charting its stimulation of the natural sciences which ultimately propelled Western Europe toward modernity

A House Built on Sand Noretta Koertge,1998 Cultural critics say that science is politics by other means arguing that the results of scientific inquiry are profoundly shaped by the ideological agendas of powerful elites They base their claims on historical case studies purporting to show the systematic intrusion of sexist racist capitalist colonialist and or professional interests into the very content of science In this hard hitting collection of essays contributors offer crisp and detailed critiques of case studies offered by the cultural critics as evidence that scientific results tell us more about social context than they do about the natural world Pulling no punches they identify numerous crude factual blunders e g that Newton never performed any experiments and egregious errors of omission such as the attempt to explain the slow development of fluid dynamics solely in terms of gender bias Where there are positive aspects of a flawed account or something to be learned from it they do not hesitate to say so Their target is shoddy scholarship

The British Industrial Revolution in Global Perspective Robert C. Allen,2009-04-09 Why did the industrial revolution take place in eighteenth century Britain and not elsewhere in Europe or Asia In this convincing new account Robert Allen argues that the British industrial revolution was a successful response to the global economy of the seventeenth and eighteenth centuries He shows that in Britain wages were high and capital and energy cheap in comparison to other countries in Europe and Asia As a result the breakthrough technologies of the industrial revolution the steam engine the cotton mill and the substitution of coal for wood in metal production were uniquely profitable to invent and use in Britain The high wage economy of pre industrial Britain also fostered industrial development since more people could afford schooling and apprenticeships It was only when British engineers made these new technologies more cost effective during the nineteenth century that the industrial revolution would spread around the world **Hubris and Hybrids** Mikael Hård,Andrew Jamison,2013-09-13 Human societies have not always taken on new technology in appropriate ways Innovations are double edged swords that transform relationships among people as well as between human societies and the natural world Only

through successful cultural appropriation can we manage to control the hubris that is fundamental to the innovative enterprising human spirit and only by becoming hybrids combining the human and the technological will we be able to make effective use of our scientific and technological achievements This broad cultural history of technology and science provides a range of stories and reflections about the past discussing areas such as film industrial design and alternative environmental technologies and including not only European and North American but also Asian examples to help resolve the contradictions of contemporary high tech civilization

Science and Technology in World History James Edward McClellan, Harold Dorn, 2006-04-14 Publisher description

The Useful Knowledge of William Hutton Susan E. Whyman, 2018-09-20 The Useful Knowledge of William Hutton shows the rapid rise of a self taught workman and the growing prominence of the city of Birmingham during the two major events of the eighteenth century the Industrial Revolution and the Enlightenment Hutton achieved wealth land status and literary fame but later became a victim of violent riots The book boldly claims that an understanding of the Industrial Revolution requires engagement with the figure of the rough diamond a person of worth and character but lacking in manners education and refinement A cast of unpolished entrepreneurs is brought to life as they drive economic and social change and improve their towns and themselves The book also contends that the rise of Birmingham cannot be understood without accepting that its vibrant cultural life was a crucial factor that spurred economic growth Readers are plunged into a hidden provincial world marked by literacy bookshops printing authorship and the spread of useful knowledge We see that ordinary people read history and wrote poetry whilst they grappled with the effects of industrial change Newly discovered memoirs reveal social conflict and relationships in rare detail They also address the problems of social mobility income inequality and breath taking technological change that continue to perplex us today

Networks of Improvement Jon Mee, 2023-10-10 A new literary cultural history of the Industrial Revolution in Britain from the late eighteenth to the mid nineteenth centuries Working against the stubbornly persistent image of dark satanic mills in many ways so characteristic of literary Romanticism Jon Mee provides a fresh revisionary account of the Industrial Revolution as a story of unintended consequences In *Networks of Improvement* Mee reads a wide range of texts economic medical and more conventionally literary with a focus on their circulation through networks and institutions Mee shows how a project of enlightened liberal reform articulated in Britain s emerging manufacturing towns led to unexpectedly coercive forms of machine productivity a pattern that might be seen repeating in the digital technologies of our own time Instead of treating the Industrial Revolution as Romanticism s other Mee shows how writing practices and institutions emanating from these industrial towns developed a new kind of knowledge economy one where local literary and

philosophical societies served as important transmission hubs for the circulation of knowledge Critical Terms for Religious Studies Mark C. Taylor, 2013-07-09 A century that began with modernism sweeping across Europe is ending with a remarkable resurgence of religious beliefs and practices throughout the world. Wherever one looks today from headlines about political turmoil in the Middle East to pop music and videos, one cannot escape the pivotal role of religious beliefs and practices in shaping selves, societies and cultures. Following in the very successful tradition of *Critical Terms for Literary Studies* and *Critical Terms for Art History*, this book attempts to provide a revitalized self-aware vocabulary with which this bewildering religious diversity can be accurately described and responsibly discussed. Leading scholars working in a variety of traditions demonstrate through their incisive discussions that even our most basic terms for understanding religion are not neutral but carry specific historical and conceptual freight. These essays adopt the approach that has won this book's predecessors such widespread acclaim: each provides a concise history of a critical term, explores the issues raised by the term, and puts the term to use in an analysis of a religious work, practice, or event. Moving across Judaism, Christianity, Hinduism, Buddhism, Islam, and Native American and Mayan religions, contributors explore terms ranging from experience, territory, and image to God, sacrifice, and transgression. The result is an essential reference that will reshape the field of religious studies and transform the way in which religion is understood by scholars from all disciplines, including anthropology, sociology, psychology, cultural studies, gender studies, and literary studies.

All about Science Maria Burguete, Lui Lam, 2014 There is a lot of confusion and misconception concerning science. The nature and contents of science is an unsettled problem. For example, Thales of 2,600 years ago is recognized as the father of science, but the word science was introduced only in the 14th century; the definition of science is often avoided in books about philosophy of science. This book aims to clear up all these confusions and present new developments in the philosophy, history, sociology, and communication of science. It also aims to showcase the achievement of China's top scholars in these areas. The 18 chapters, divided into five parts, are written by prominent scholars, including the Nobel laureate Robin Warren, sociologist Harry Collins, and physicist-turned-historian Dietrich Stauffer.
