Scientific Determination Of The Merits:

The Measure of Merit John Carson, 2025-10-28 A wide ranging account of American and French understandings of merit talent and intelligence over the past two centuries How have modern democracies squared their commitment to equality with their fear that disparities in talent and intelligence might be natural persistent and consequential John Carson tells the fascinating story of how two nations wrestled scientifically with human inequalities and their social and political implications Surveying a broad array of political tracts philosophical treatises scientific works and journalistic writings Carson chronicles the gradual embrace of the IQ version of intelligence in the United States while in France the birthplace of the modern intelligence test expert judgment was consistently prized above such quantitative measures He also reveals the crucial role that determinations of and contests over merit have played in both societies they have helped to organize educational systems justify racial hierarchies classify army recruits and direct individuals onto particular educational and career paths A contribution to both the history of science and intellectual history The Measure of Merit illuminates the shadow languages of inequality that have haunted the American and French republics since their inceptions Federal research : DOE is providing independent review of the scientific merit of its research : report to the Committee on Science, House of Representatives , A Review of NASA Human Research Program's Scientific Merit Assessment Processes Institute of Medicine, Board on Health Sciences Policy, Committee on the Review of NASA Human Research Program's Scientific Merit Assessment Processes, 2012-08-20 At the request of NASA an IOM committee reviewed NASA Human Research Program's HRP's Scientific Merit Assessment Processes for directed research Directed research is commissioned or noncompetitively awarded research that is not competitively solicited because of specific reasons such as time limitations or highly focused or constrained research topics The scientific merit assessment processes have been developed by NASA to evaluate individual directed research tasks in order to ensure the scientific integrity of the HRP's directed research portfolio The committee examined the HRP's current scientific merit assessment processes and conducted a public workshop to identify best practices among other federal agencies that use various assessment processes for similar types of directed research Review of NASA Human Research Program's Scientific Merit Processes Letter Report finds that the scientific merit assessment process used by the HRP for directed research is scientifically rigorous and is similar to the processes and merit criteria used by many other federal agencies and organizations including the Department of Defense National Institutes of Health and the United States Department of Agriculture for comparable types of research This report also makes recommendations on ways to streamline and bolster the accountability and transparency of NASA's current processes

The Philosophy and Practice of Science David B. Teplow,2023-08-31 This book is a novel synthesis of the philosophy and practice of science covering its diverse theoretical metaphysical logical philosophical and practical elements The process of science is generally taught in its empirical form what science is how it works what it has achieved and what it might achieve in the future What is often absent is how to think deeply about science and how to apply its lessons in the pursuit of truth in other words knowing how to know In this volume David Teplow presents illustrative examples of science practice history and philosophy of science and sociological aspects of the scientific community to address commonalities among these disciplines In doing so he challenges cherished beliefs and suggests to students philosophers and practicing scientists new epistemically superior ways of thinking about and doing science

Merit, Justice, and the Political Theory of Academic Knowledge Production Camilla Boisen,Matthew C. Murray,2024-08-09 Academia has long established itself as an institution of knowledge and ideas Facing pressure many academic fields and institutions have turned their attention singularly and collectively to the task of what to do to rectify the causes of under representations both academic knowledge itself and who gets to be an academic producer of knowledge Boisen and Murray argue that simply solving the contemporary symptoms of inequity in ideas knowledge production and the academy is not enough Political Theory must be used to analyze why dominant ideas and institutions namely merit and the resulting meritocracy and meritocratic procedures were given power in the first place In using political theory and theories of justice the book argues that academia must radically shift rather than procedurally reform these methods of evaluation in order to achieve a more coherent approach to diversity in ideas academic knowledge producers and academic knowledge production which are necessary to bring about other forms of social change and reform in our larger world In questioning the ideals and the use of rival ideals to temper flawed concepts

the present motivations and justifications for producing academic knowledge can be relegated as political tools allowing true meaningful reform Boisen and Murray show how contemporary crises in academia around diversification of perspectives can only be solved by considering the justifications of academic knowledge production and the inherent risk of retaining the established competitive and presumptively natural but ultimately biased methods of deriving academic authority
