area of computational and formation sciences together to exchange new ideas and to explore new ground The goal of the conference was to push the application of modern computing technologies to science engineering and information technologies to a new level of sophistication and understanding

The initial idea to organize such a conference with a focus on computation and applications was originated by Dr Jun Zhang during his visit to China in August 2003 in consultation with a few friends including Dr Jing Liu at the Chinese Academy of Sciences Dr Jun Hai Yong at Tsinghua University Dr Geng Yang at Nanjing University of Posts and Communications and a few others After several discussions with Dr Ji Huan He it was decided that Donghua University would host CIS 2004 CIS 2004 attempted to distinguish itself from other conferences in its phasis on participation rather than publication A submitted paper was only reviewed with the explicit understanding that if accepted at least one of the authors would attend and present the paper at the conference It is our lief that attending conferences is an important part of one s academic career through which academic networks can be built that may bene t one s academic life in the long run We also made every e ort to support graduate students in attending CIS 2004 In addition to set reduced registration fees for full time graduate students we awarded up to three prizes for to the Best Student Papers at CIS 2004 Students whose papers were selected for awards were given cash prizes plus a waiver of registration fees

Modern Optimization Methods for Decision Making Under Risk and Uncertainty Alexei A. Gaivoronski, Pavlo S. Knopov, Volodymyr A. Zaslavskyi, 2023-10-06 The book comprises original articles on topical issues of risk theory rational decision making statistical decisions and control of stochastic systems The articles are the outcome of a series international projects involving the leading scholars in the field of modern stochastic optimization and decision making The structure of stochastic optimization solvers is described The solvers in general implement stochastic quasi gradient methods for optimization and identification of complex nonlinear models These models constitute an important methodology for finding optimal decisions under risk and uncertainty While a large part of current approaches towards optimization under uncertainty stems from linear programming LP and often results in large LPs of special structure stochastic quasi gradient methods confront nonlinearities directly without need of linearization This makes them an appropriate tool for solving complex nonlinear problems concurrent optimization and simulation models and equilibrium situations of different types for instance Nash or Stackelberg equilibrium situations The solver finds the equilibrium solution when the optimization model describes the system with several actors The solver is parallelizable performing several simulation threads in parallel It is capable of solving stochastic optimization problems

finding stochastic Nash equilibria and of composite stochastic bilevel problems where each level may require the solution of stochastic optimization problem or finding Nash equilibrium Several complex examples with applications to water resources management energy markets pricing of services on social networks are provided In the case of power system regulator makes decision on the final expansion plan considering the strategic behavior of regulated companies and coordinating the interests of different economic entities Such a plan can be an equilibrium a planned decision where a company cannot increase its expected gain unilaterally *Proceedings of the Multi-Conference 2011* Himanshu B.
