## **Sediment Transport In Irrigation Canals:**

*Sediment Transport in Irrigation Canals* Herman Depeweg, Krishna P. Paudel, Néstor Méndez V, 2014-10-06 Sediment transport in irrigation canals influences to a great extent the sustainability of an irrigation system Unwanted erosion or deposition will not only increase maintenance costs but may also lead to unfair unreliable and unequitable distribution of irrigation water to the end users Proper knowledge of the characteristics including behaviour and transport of sediment will help to design irrigation systems plan efficient and reliable water delivery schedules to have a controlled deposition of sediments to estimate and arrange maintenance activities etc The main aim of these lecture notes is to present a detailed analysis and physical and mathematical descriptions of sediment transport in irrigation canals and to describe the mathematical model SETRIC that predicts the sediment transport deposition and entrainment rate as function of time and place for various flow conditions and sediment inputs The model is typically suited for the simulation of sediment transport under the particular conditions of non wide irrigation canals where the flow and sediment transport are strongly determined by the operation of the flow control structures The lecture notes will contribute to an improved understanding of the behaviour of sediments in irrigation canals They will also help to decide on the appropriate design of the system the water delivery plans to evaluate design alternatives and to achieve an adequate and reliable water supply to the farmers [A New Approach to Sediment Transport in the Design and Operation of Irrigation Canals](#) Herman Depeweg, Néstor Méndez V, 2007-04-05 The transport of sediment greatly influences the sustainability of an irrigation system Erosion and deposition not only increase maintenance costs but may result in an inequitable and inadequate distribution of irrigation water Understanding the behaviour and transport of sediment allows efficient planning and reliable water delivery schedules

**Sediment Transport in Irrigation Canals** V. Mendez, J. Nestor, 1998-01-01 This study focuses on sediment transport in irrigation canals which may have a serious impact on design operation and maintenance activities Using a mathematical model and examining ways in which this model can be applied to real world situations this text is highly useful for theoreticians and students alike *Sediment Transport in Irrigation Canals* Shivaji Shende, 2015-03 An irrigation canal is a waterway often man made or enhanced built for the purpose of carrying water from a source such as a lake river or stream to soil used for farming or landscaping The engineering concept of efficiency at different levels of a canal system is important for planning designing and even operating a canal irrigation system [Sediment Transport in Irrigation Canals](#) Surender Bishnoi, 2017 **Suspended sediment transport in irrigation canals** N. **Role of Sediment in the Design and Management of Irrigation Canals** Krishna P. Paudel,2017-07-03 The performance of irrigation schemes that carry sediment laden water is often poor Modern irrigation schemes are increasingly demand based which means that the water flow in the canals is determined by the crop water requirements Accordingly the flow in the canal network is not constant as the crop water requirement changes with the climate and the growing stages Also the inflow of the sediment is not constant throughout the irrigation season Such schemes particularly having unlined canals in alluvial soils are difficult to design and to manage without compromising the flexibility or maintenance cost This research has made an in depth assessment on the role of sediment in the design and management of an irrigation scheme by using the data of Sunsari Morang Irrigation Scheme Nepal An analysis of the velocity and shear stress distribution across a non wide trapezoidal canal has been made to derive the correction factor for the sediment transport predictors An improved approach based on a rational concept of the design of canals for sediment transport is proposed By using the sediment transport model SETRIC a water delivery plan has been designed and tested for changing water and sediment inflow conditions that can be implemented with the existing canal infrastructure The research also shows that flexibility of operation and efficient sediment management are difficult to achieve at the same time A compromise has to be made and this needs to be reflected in the design All methods to transport exclude or extract the sediment are temporary measures and just transfer the problem from one place to the other A better understanding of sediment movement helps to identify the problems beforehand and to find the best possible solutions
