

# Hans Albert Einstein (May 14, 1904 – July 26, 1973)

- Hans Albert Einstein was a pioneer in the field of sedimentation and erosion control.
- He was the first to develop the concept of the "scour hole" in a riverbed.
- One of his most famous papers, "The Scour Hole in a Riverbed," was published in 1935.
- In tribute to Einstein's lifelong contributions to the field, his former graduate students published a book of research in his honor in 1972, *Sedimentation: Symposium to Honor Professor H.A. Einstein*.
- In 1988, the American Society of Civil Engineers created the *Hans Albert Einstein Award* to recognize outstanding achievements in erosion control, sedimentation and/or waterway development.

**Sedimentation** Hsieh Wen Shen, 1972 *Sedimentation* Xiewen Shen, 1972 **ARS-S.**, 1975 **Fluvial Hydrodynamics** Subhasish Dey, 2024-11-02 This revised second edition of the book presents an improvement of the original version in terms of recent research corrections and outline The state of the art in fluvial hydrodynamics can be examined only through a careful exploration of the theoretical development and applied engineering technology This second updated edition focuses since most up to date research findings in the field are presented on the research aspects that involve a comprehensive knowledge of sediment dynamics in turbulent flows It begins with the fundamentals of hydrodynamics and particle motion followed by turbulence characteristics related to sediment motion Sediment dynamics are described from a classical perspective by applying the mean bed shear approach and additionally incorporating a statistical description for the role of turbulence It is intended to design as a course textbook in graduate research level and a guide for the field engineers as well keeping up with modern technological developments One of the most important additions is that at the end of each chapter varieties of problems were given Therefore as a simple prerequisite the background of the readers should have a basic knowledge in hydraulics in undergraduate level and an understanding of fundamentals of calculus **Kinematic**

**Wave Modeling in Water Resources** Vijay P. Singh, 1997-10-28 Kinematic wave KW modeling methods are gaining wide acceptance as fast and accurate methods for handling a wide range of water modeling problems This book provides a through reference to the application of KW methods to such problems as the spatial representation of watersheds overland flow routing and channel flow routing *Report on Laboratory Investigation of L-head River Control Structures* Walter Marcellus Linder, Howard E. Fienberg, 2012-12-06 The International Statistical Institute was founded in 1885 and is therefore one of the world s oldest international scientific societies The field of statistics is still expanding rapidly and possesses a rich variety of applications in many areas of human activity such as science government business industry and everyday affairs In consequence the celebration of the Institute s centenary in 1985 is of considerable interest not only to statisticians but also more widely to the international scientific community As part of its centennial celebration planning the Institute decided to publish a volume of papers representing the immensely wide range of interests encompassed by statistics in its international context viewed both from a historical and from a contemporary standpoint We were fortunate in securing the services of Anthony Atkinson and Stephen Fienberg as Editors of this volume they have worked hard over a period of several years to put together a most

fascinating collection of papers On behalf of the Institute it is my pleasant duty to thank them and the authors for their contributions J DURBIN President International Statistical Institute Preface The papers in this volume were prepared to help celebrate the centenary of the International Statistical Institute During the ISI s first 100 years statistics has matured both as a scientific discipline and as a profession in ways that the ISI s founders could not possibly have imagined Proceedings of the Third Federal Inter-agency Sedimentation Conference, 1976, 1976

**Water-Quality Hydrology** V.P. Singh, Bhishm Kumar, 2012-12-06 Water is vital to life maintenance of ecological balance economic development and sustenance of civilization Planning and management of water resources and its optimal use are a matter of urgency for most countries of the world and even more so for India with a huge population Growing population and expanding economic activities exert increasing demands on water for varied needs domestic industrial agricultural power generation navigation recreation etc In India agriculture is the highest user of water The past three decades have witnessed numerous advances as well as have presented intriguing challenges and exciting opportunities in hydrology and water resources Compounding them has been the growing environmental consciousness Nowhere are these challenges more apparent than in India As we approach the twenty first century it is entirely fitting to take stock of what has been accomplished and what remains to be accomplished and what accomplishments are relevant with particular reference to Indian conditions

**Distributed Hydrological Modelling** Michael B. Abbott, Jens Christian Refsgaard, 2012-12-06 It is the task of the engineer as of any other professional person to do everything that is reasonably possible to analyse the difficulties with which his or her client is confronted and on this basis to design solutions and implement these in practice The distributed hydrological model is correspondingly the means for doing everything that is reasonably possible of mobilising as much data and testing it with as much knowledge as is economically feasible for the purpose of analysing problems and of designing and implementing remedial measures in the case of difficulties arising within the hydrological cycle Thus the aim of distributed hydrologic modelling is to make the fullest use of cartographic data of geological data of satellite data of stream discharge measurements of borehole data of observations of crops and other vegetation of historical records of floods and droughts and indeed of everything else that has ever been recorded or remembered and then to apply to this everything that is known about meteorology plant physiology soil physics hydrogeology sediment transport and everything else that is relevant within this context Of course no matter how much data we have and no matter how much we know it will never be enough to treat some problems and some situations but still we can aim in this way to do the best that we possibly can

*Mechanics of Sediment Transportation and Alluvial Stream Problems* R. J. Garde, K. G. Authoritative Reference Source For Graduate And Senior Undergraduate Civil Engineering Students      *Proceedings of the Fifth Federal Interagency Sedimentation Conference, 1991* Shou-shan Fan, Yung-Huang Kuo, 1991      Stream Channel Stability Carlos V. Alonso, Neil L. Coleman, 1981 The objective of this study is to develop a better understanding of the stochastic structure of the instantaneous boundary shear processes in open channel flows This report presents new measurements of some stochastic properties of boundary shear stress taken at points spaced over half the wetted perimeter of a smooth open channel under conditions of essentially constant aspect ratio and Reynolds number The instantaneous boundary shear stress was measured with hot film sensors driven by constant temperature anemometers The anemometer signals were digitized and analyzed in a high speed computer The effects of position along the wetted perimeter on the statistical moments and the probabilistic distribution of the instantaneous boundary shear stress are discussed Author **Research Reporting Series** ,1975      Impact of Hydrologic Modifications on Water Quality ,1975
