The Geology of Central Europe: Mesozoic and Cenozoic Tom McCann, 2008 Volume 2 provides an overview of the Mesozoic and Cenozoic evolution of Central Europe This period commenced with the destruction of Pangaea and ended with the formation of the Alps and Carpathians and the subsequent Ice Ages Separate summary chapters on the Permian to Cretaceous tectonics and the Alpine evolution are also included The final chapter provides an overview of the fossils fuels ore and industrial minerals in the region

Carbonate Sedimentology and Petrology Peter A. Scholle, Noel P. James, J. F. Read, 1989

Petroleum Sedimentology Winfried Zimmerle, H. Zimmerle, 1995-04-30 Knowledge of the principles and methods of petroleum sedimentology is essential for oil and gas exploration and exploitation This book is designed as an introductory

text for students in petroleum geology and applied sedimentology as well as a useful companion for advanced technicians explorationists geophysicists and petroleum engineers Source rock lithology and type of trap define the quality of a hydrocarbon accumulation This interrelationship is exemplified by seven case histories worldwide NW Europe Saudi Arabia U S A Mexico CIS China Moreover successful exploitation and enhanced oil recovery often depend on an adequate knowledge of the sedimentology of a reservoir Photographs illustrate macroscopic and microscopic aspects of source rocks as well as reservoir sandstones and limestones that are most important for hydrocarbon exploration A comprehensive list of references encourages further study

Recent Developments in Carbonate Sedimentology in Central Europe German Müller, G.M. Friedman, 2012-12-06 In the field of sedimentary research ever increasing emphasis has been put on the investigations of carbonates and carbonate rocks during the past 30 years It is thus quite natural that in Central Europe where classical carbonate investigations have already been carried out 100 years ago numerous scholars turned to the study of this sediment type On the occasion of a visiting professorship of G M FRIEDMAN at the Laboratorium für Sedimentforschung Heidelberg University a seminar on Recent Developments of Carbonate Sedimentology in Central Europe was held in July 1967 90 persons involved in carbonate investigations participated and 35 lectures were held The present volume contains 30 papers summarizing the different subjects of the seminar Of course these contributions only represent a small part of the work actually performed in the field of carbonate research in Central Europe We believe however that they give a general survey of the work and the working methods employed in the different sectors of carbonate investigations One of the purposes of the present symposium is to acquaint the English speaking countries with our recent results which usually due to the language barrier are not accessible to them

SEDIMENTOLOGY OF PARTS OF CENTRAL EUROPE- GUIDEBOOK TO EXCURSIONS HELD DURING THE 8TH INTERNATIONAL SEDIMENTOLOGICAL CONGRESS. , *Sedimentary Basins* Gerhard Einsele, 2013-06-29 The modern geological sciences are characterized by extraordinarily rapid progress as well as by the development and application of numerous new and refined methods most of them handling an enormous amount of data available from all the continents and oceans Given this state of affairs it seems inevitable that many students and professionals tend to become experts in relatively narrow fields and thereby are in danger of losing a broad view of current knowledge The abundance of new books and symposium volumes testifies to this trend toward specialization However many geologic processes are complex and result from the interaction of many seemingly unrelated individual factors This signifies that we still need generalists who have the broad overview and are able to evaluate the great variety of factors and processes controlling a geologic system such as a sedimentary basin In addition this also means that cooperation with other disciplines in the natural sciences and engineering is increasingly important Modern text books providing this broad overview of the earth sciences are rare

Carbonate Depositional Environments Peter A. Scholle, Don G. Bebout, Clyde H. Moore, 1983 This is the book you need to improve your interpretations of carbonates Using a systematic treatment of the

entire subject of carbonate depositional environments this unique book is specifically designed for use by the non specialist the petroleum geologist or field geologist who uses carbonate depositional environments in facies reconstructions and environmental interpretations This classic work covering settings from non marine to deep water focuses on the recognition of depositional environments with extensive use of color diagrams and photographs of sedimentary structures and facies assemblages Although the ultimate purpose of this text is to improve exploration for oil gas and mineral deposits it also includes environments not normally considered to be particularly prospective for oil and gas in an attempt to provide as complete a framework as possible for recognition of environments Suitable for use as a textbook this book is also an invaluable reference for the specialist or advanced graduate student It provides perspective on large scale influences on carbonate depositional environments such as tectonic patterns fluctuations of sea level variations of climate and evolutionary patterns of organisms *Mundus*, 1972 **Depositional Sedimentary Environments** H.-E. Reineck, I.B.

Singh, 2012-12-06 From the reviews This is an extremely useful reference text for the sedimentary geologist to own It is well produced with clear illustrations and text and gives excellent factual information on a large number of topics

Palaeogeography Palaeoclimatology Palaeoecology represents a significant contribution to the literature of geoscience It should be in the library of anyone seriously interested in sedimentology Marine Geology This book is still unsurpassed in providing a good basic synthesis of modern sedimentary environments especially the physical attributes of the deposits being formed and the processes responsible Sedimentary Geology **Geology of Hungary** Janós Haas, 2012-06-30 Hungary lies in the central part of the Pannonian Basin surrounded by the ranges of the Alps Carpathians and Dinarides The geology of the country can be summarized as a process whereby complicated plate collision type orogeny was followed by the formation of a young basin in which a relatively complete sequence of basin infill has been preserved The handbook Geology of Hungary presents an outline of the main features of the geology and geohistory of the region in a single volume illustrated by a great number of color figures and photos for the benefit of foreign geoscientists interested in this area The volume follows the evolutionary history of the major structural units prior to their juxtaposition in the Tertiary and discusses the subsequent evolution of the Pannonian Basin Due to the geohistorical approach to this study it was necessary to extend the scope of the discussion beyond the present day political boundaries of Hungary to cover most of the Pannonian region **Recent**

Chaminé, Maurizio Barbieri, Zeynal Abiddin Ergüler, 2024-03-19 This book is based on the accepted papers for presentation at the 2nd MedGU Annual Meeting Marrakech 2022 It covers various topics from the fields of 1 sedimentology stratigraphy paleontology 2 geochemistry

mineralogy petrology volcanology 3 structural geology tectonics geodynamics petroleum geology 4 petroleum and energy sciences and engineering 5 astrogeology impact craters and meteorites and 6 climate and sea level change during the Cenomanian Turonian Anoxic Event based on a synthesis of sedimentological micropaleontological and geochemical records The content of these papers provides new scientific knowledge based on a series of newest research studies that are relevant to Middle East Mediterranean region and Africa **European Fossil Reef Models** Donald F. Toomey,1981 *Integrating Paleoclimate, Stratigraphy, Sedimentology & Paleontology in Human Evolution and Dispersal Studies - from Early Hominins to the Holocene* Verena E. Foerster,Christian Zeeden,Annett Junginger,2022-05-25 European Copper Deposits S. Jankovic,R. H. Sillitoe,1980 *Tectonic Controls and Signatures in Sedimentary Successions* Lynne E. Frostick,2009-04-13

Stratigraphers and sedimentologists who are presently describing and interpreting the infill of sedimentary basins are generally agreed that it is difficult to disentangle the signatures of tectonic processes from those of climate and eustatic sea level change in the resultant rock succession Until better criteria are developed to distinguish between the roles played by the major variables it is still most useful to document and interpret basin fill architectures where we know from independent evidence that one of the main controls is likely to have been a major contributor This book contains a collection of papers describing situations where the tectonic setting is fairly well established and it can be assumed that at least the tectonic factor has contributed to the resultant signatures **Bibliography and Index of Geology** ,1992 *Bibliography of North American Geology* ,1968 1919 28 cumulation includes material previously issued in the 1919 20 1935 36 issues and also material not published separately for 1927 28 1929 39 cumulation includes material previously issued in the 1929 30 1935 36 issues and also material for 1937 39 not published separately
