Milliman, G. Müller, F. Förstner, 2012-12-06 Few fields of research in the earth sciences have produced as much data and literature as the study of carbonate sediments and rocks The past 25 years in particular have seen a significant increase in studies concerning modern marine and fresh water carbonates With the present worldwide interest in oceanographic research marine carbonates have received the bulk of the attention particularly with respect to shallow water sediments However in terms of the variety of environments compositions and modes of formation non marine carbonates probably encompass a wider spectrum than do marine types Our purpose is to present a two volume treatise on carbonate sediments and rocks both marine and non marine We have confined ourselves to the discussion of modern Holocene environments sediments and components assuming that the compilation of these data will not only be relevant to those working with modern carbonates but will also serve as a necessary reference source for those interested in ancient analogs The first volume by MILLIMAN deals almost exclusively with marine environments while the second volume by MULLER and FORSTNER will concentrate on the non marine carbonates      Depositional Sedimentary Environments H.-E. Reineck, I. B. Singh, 2012-12-06 This book has been written with the aim of compiling from modern environments information that can be useful in the reconstruction of ancient environments It is intended for all those interested in recognizing depositional environments The study of sediments includes investigations of various aspects of sediments This needs a study by standard methods Methods of study have not been included as many textbooks exist on the subject However the importance of various results obtained from such investigations has been discussed as far as these

results can be helpful in environmental reconstruction Special attention is given to information that has accumulated during the last decades on the mode of genesis of various sedimentary features and their distribution in present day environments As far as possible existing terminology has been used However in several cases new simple groupings and classifications have been proposed In making classification generally the form and shape of the features have been considered so that they can be applied easily to ancient sediments At the same time the genesis of such features has been noted and genetic names and their characteristics have been given for detailed work The subject is so vast that several primary sedimentary features that have no direct bearing on environmental interpretation have been omitted The subject is vast and numerous publications are available Biology and Geology of Coral Reefs V1 Owen Arthur Jones, 2012-12-02 Biology and Geology of Coral Reefs

Volume I Geology 1 focuses on the evolution reef types geology and structural and tectonic factors causing the development of coral reefs The selection first offers information on the coral reefs of the Caribbean and Indian Ocean including evolution physical environment coral diversity reef communities reef types and zonation and reef morphology and sea level change The manuscript then takes a look at the Bikini and Eniwetok Atolls in Marshall Islands geomorphology and geology of coral reefs in French Polynesia and the coral reefs of New Caledonia The publication examines the coral reefs of the New Guinea region and waters of the Great Barrier Reef province Topics include climate seasonal variations in temperature and salinity and water masses in the Coral Sea and their effect on the Great Barrier Reef The book also ponders on the geomorphology of Eastern Queensland in relation to the Great Barrier Reef structural and tectonic factors influencing the development of coral reefs off Northeastern Queensland and sediments of the Great Barrier Reef province The selection is a vital source of information for marine biologists and readers interested in the geology evolution physical environment and diversity of coral reefs **Memorias** ,1972 *Collected reprints* Atlantic Oceanographic and Meteorological Laboratory, 1972
