Introduction The Fourth Symposium on Sediment Water Interactions was held in Melbourne Australia February 16 20th 1987 The previous three symposia were held in Amsterdam Kingston Ontario and Geneva In keeping with the approach established in Geneva contributions addressed sediment water interactions related to both fresh and salt water conditions More than 160 papers were given in Melbourne including more than 20 poster presentations and collected Abstracts are available from Dr B T Hart A total of 51 papers subsequently have been published as proceedings of the Melbourne Symposium 45 of these appear in this issue of *Hydrobiologia* A further six appeared earlier as a selection of papers in *J Environ Geol and Water Science* 1988 issue 1 these six papers appear in abstract form only in the present publication Although concerned with the global environment the International Association for Sediment Water Science attempts to ensure that there is a genuine opportunity for participants to focus on regional issues throughout the world and in particular to provide a local forum for their presentation The Melbourne meeting was particularly successful in achieving this objective and Australasia was well represented by about 36 percent of the contributors About 27 percent were from Europe 17 percent from North America 7 percent from China and Japan 7 percent from Southeast Asia and India and about 6 percent came from other areas In all 25 countries were represented The English Catalogue of Books Sampson Low,1926 Volumes for 1898 1968 include a directory of publishers *Small-scale Freshwater Toxicity Investigations* Christian Blaise,Jean-François Férard,2006-01-16 Developed developing and emerging economies worldwide are collectively contributing multiple stresses on aquatic ecosystems by the release of numerous contaminants This in turn demands that basic toxicological information on their potential to harm living species be available Hence environmental protection programs aimed at preserving water quality must have access to comprehensive toxicity screening tools and strategies that can be applied reliably and universally While a good number of toxicity testing procedures and hazard assessment approaches have been published in the scientific literature over the past decades many are wanting in that insufficient detail is available for users to be able to fully understand the test method or scheme and to be able to reproduce it successfully Even standardized techniques published in recognized international standard organization documents are often lacking in thoroughness and minutiae Paucity of information relating to biological test methods may be consequent and trigger several phenomena including generation of invalid data and resulting toxicity measurements erroneous interpretation and decision taking with regards to a particular chemical or environmental issue or simply abandonment of testing procedures Clearly improperly documented toxicity testing methods can be detrimental to their promotion and use as they open the doorway to unnecessary debate and criticism as to their raison d'être Furthermore this situation can indirectly contribute to delaying minimizing or eliminating their

application thereby curtailing the important role toxicity testing plays in the overall protection and conservation of aquatic ecosystems *Proceedings of The 9th International Conference on Water Resource and Environment* Chih-Huang
