Edible Heirlooms, **Vegetables and Fruits**, 1998 *Enduring Seeds* Gary Paul Nabhan, 2016-10-01 As biological diversity continues to shrink at an alarming rate the loss of plant species poses a threat seemingly less visible than the loss of animals but in many ways more critical In this book one of America s leading ethnobotanists warns about our loss of natural vegetation and plant diversity while providing insights into traditional Native agricultural practices in the Americas Gary Paul Nabhan here reveals the rich diversity of plants found in tropical forests and their contribution to modern crops then tells how this diversity is being lost to agriculture and lumbering He then relates local parables of Native American agriculture from wild rice in the Great Lakes region to wild gourds in Florida that convey the urgency of this situation and demonstrate the need for saving the seeds of endangered plants Nabhan stresses the need for maintaining a wide gene pool not only for the survival of these species but also for the preservation of genetic strains that can help scientists breed more resilient varieties of other plants *Enduring Seeds* is a book that no one concerned with our environment can afford to ignore It clearly shows us that as agribusiness increasingly limits the food on our table a richer harvest can be had by preserving ancient ways This edition features a new foreword by Miguel Altieri one of today s leading spokesmen for sustainable agriculture and the preservation of indigenous farming methods **Gourmet Vegetables** Anne Raver, 2002 Both gardeners and gourmet cooks will relish this luscious volume written by leading gardeners growers and chefs To kickstart your vision seek out a copy of *Gourmet Vegetables* one of the garden s excellent series of compact garden handbooks Top garden writers

Gardening with Heirloom Seeds (Volume 2 of 2) (EasyRead Super Large 20pt Edition), *Shattering* Cary Fowler, Patrick R. Mooney, 1990 It was through control of the shattering of wild seeds that humans first domesticated plants Now control over those very plants threatens to shatter the world's food supply as loss of genetic diversity sets the stage for widespread hunger Large scale agriculture has come to favor uniformity in food crops More than 7 000 U S apple varieties once grew in American orchards 6 000 of them are no longer available Every broccoli variety offered through seed catalogs in 1900 has now disappeared As the international genetics supply industry absorbs seed companies with nearly one thousand takeovers since 1970 this trend toward uniformity seems likely to continue and as third world agriculture is brought in line with international business interests the gene pools of humanity's most basic foods are threatened The consequences are more than culinary Without the genetic diversity from which farmers traditionally breed for resistance to diseases crops are more susceptible to the spread of pestilence Tragedies like the Irish Potato Famine may be thought of today as ancient history yet the U S corn blight of 1970 shows that technologically based agribusiness is a breeding ground for disaster Shattering reviews the development of genetic diversity over 10 000 years of human agriculture then exposes its loss in our lifetime at the hands of political and economic forces The possibility of crisis is real this book shows that it may not be too late to avert it
