Second Edition with 19 new chapters *Managing Innovation and Change* showcases the best work of thinkers writing in this area and provides a coherent picture of key ideas and concepts to have emerged from this exciting field. Frequently radical and intentionally provocative in terms of topic and treatment, the book covers the increasing diversity of pressures to which modern enterprises are subjected, reviews some of the more persistent acronyms to which the art of management is increasingly prone, examines the nature of innovation, looks at the broader issues surrounding change, and turns to those attributes of leadership which are consistent with the successful management of innovation and change. *Collaborative Systems for Production Management* Harinder Singh Jagdev, Johan C. Wortmann, Henk Jan Pels, 2013-11-11. The business environment throughout the world is currently going through rapid and far-reaching change. They are analysing their business processes and scrutinising ways to make their systems more streamlined and competitive in order to meet the challenges posed by the Global Economy. Forming close alliances and integrating the operational processes with the key suppliers and customers is the mantra every one is embodying. In parallel and to support this shift in strategic focus, developers are putting forward new concepts in the emerging Information and Communications Technologies (ICT) to make the integration of processes among collaborating enterprises as seamless and secure as possible. Together, these developments have yielded a tremendous amount of new knowledge and will continue to offer us new challenges and opportunities well into the future. This book brings together the opinions of a number of leading experts: analysts, academics, researchers, vendors, and industrial practitioners from around the world who have worked extensively in the area of collaborative manufacturing. Through individual chapters in this book, authors put forward their views, approaches, and new tools. Still, other authors present a glimpse of the nature of solutions that may be developed in the near future. This book is loosely structured to allow chapters which address common themes to be grouped together. In these chapters, the reader will learn about the key issues currently being addressed in production management research and practice throughout the world.

Sustainable food production and ethics Werner Zollitsch, Christoph Winckler, Susanne Waiblinger, Alexander Haslberger, 2023-08-28. Sustainability has become an issue widely debated in many countries. Given the central role of food supply and the emotional relationship that modern mankind still has to its food, sustainability is seen as a value which has to be maintained throughout food supply chains. The complexity of modern food systems invokes a variety of ethical implications which emerge from contrasts between ideals, perceptions, and the conditions of technical processes within food systems and the concerns connected to this. This book covers a broad range of aspects within the general issue of sustainable food production and ethics. Linking different academic disciplines, topics range from reflections about the roots of sustainability and the development of concepts and approaches to globalisation and resilience of food systems, as well as specific ethical aspects of organic farming and animal welfare. Modern technologies which are intensely advocated by certain stakeholder groups and their societal challenges are addressed, as are many other specific cases of food production and processing.
