Seismic Velocity Analysis And The Convolutional Model:

Seismic Velocity Analysis and the Convolutional Model Enders A. Robinson, 1983-01-01 **Seismic Velocity Analysis and the Convolutional Model** Enders Robinson, 1983 Seismic Hydrocarbon Exploration Hamid N. Alsadi, 2016-08-26

This book presents the essential principles and applications of seismic oil exploration techniques. It concisely covers all stages in exploration activities: data field acquisition, data processing and interpretation, supplementing the main text with a wealth of 350 illustrations and figures. The book concentrates on the physics of the applied principles, avoiding intricate mathematical treatment and lengthy theoretical reasoning. A further prominent feature is the inclusion of a separate chapter on 3D surveying techniques and another equally important chapter on seismic digital signals and the aliasing problem, which is presented in an accessible form. The book is designed to meet the needs of both the academic and industrial worlds. University students and employees of oil exploration companies alike will find the book to be a valuable resource.

Digital Imaging and Deconvolution Enders A. Robinson, Sven Treitel, 2008. *Digital Imaging and Deconvolution: The ABCs of Seismic Exploration and Processing*. SEG Geophysical References Series No. 15 covers the basic ideas and methods used in seismic processing, concentrating on the fundamentals of seismic imaging and deconvolution. Most chapters are followed by problem sets. Some exercises supplement textual material; others are meant to stimulate classroom discussions. Text and exercises deal mostly with simple examples that can be solved with nothing more than pencil and paper. The book covers wave motion, digital imaging, digital filtering, various visualization aspects of the seismic reflection method, sampling theory, the frequency spectrum, synthetic seismograms, wavelets and wavelet processing, deconvolution, the need for continuing interaction between the seismic interpreter and the computer, seismic attributes, phase rotation and seismic attenuation. The last of the 15 chapters provides a detailed mathematical overview. *Digital Imaging and Deconvolution* nominated for the Association of Earth Science Editors award for best geoscience publication of 2008. 2009 will interest professional geophysicists, graduate students and upper level undergraduates in geophysics. The book also will be helpful to scientists and engineers in other disciplines who use digital signal processing to analyze and image wave motion data in remote detection applications. The methods described are important in optical imaging, video imaging, medical and biological imaging, acoustical analysis, radar and sonar.

Exploration Geophysics Mamdouh R. Gadallah, Ray Fisher, 2008-10-20. Many text books have been written on the subject *Exploration Geophysics*. The majority of these texts focus on the theory and the mathematical treatment of the subject matter but lack treatment of practical aspects of geophysical exploration. This text is written in simple English to explain the physical meaning of jargon or terms used in the industry. It describes how seismic data is acquired in 2D and 3D, how they are processed to convert the raw data to seismic vertical and horizontal cross sections that are geologically meaningful and how these and other data are interpreted to delineate a prospect. Workshops are included after each chapter and are designed to reinforce learning of the concepts presented.

Key Features Written in simple easy to understand

language Heavily illustrated to aid in understanding the text End of chapter Key words and workshop The text includes several appendices and answers for the selected workshop problems *Maximum-Likelihood Deconvolution* Jerry M. Mendel, 2012-12-06 Convolution is the most important operation that describes the behavior of a linear time invariant dynamical system Deconvolution is the unraveling of convolution It is the inverse problem of generating the system's input from knowledge about the system's output and dynamics Deconvolution requires a careful balancing of bandwidth and signal to noise ratio effects Maximum likelihood deconvolution MLD is a design procedure that handles both effects It draws upon ideas from Maximum Likelihood when unknown parameters are random It leads to linear and nonlinear signal processors that provide high resolution estimates of a system's input All aspects of MLD are described from first principles in this book The purpose of this volume is to explain MLD as simply as possible To do this the entire theory of MLD is presented in terms of a convolutional signal generating model and some relatively simple ideas from optimization theory Earlier approaches to MLD which are couched in the language of state variable models and estimation theory are unnecessary to understand the essence of MLD MLD is a model based signal processing procedure because it is based on a signal model namely the convolutional model The book focuses on three aspects of MLD 1 specification of a probability model for the system's measured output 2 determination of an appropriate likelihood function and 3 maximization of that likelihood function Many practical algorithms are obtained Computational aspects of MLD are described in great detail Extensive simulations are provided including real data applications **Aspects of Seismic Reflection Data Processing** R. Marschall, 2012-12-06

Practical Seismic Data Analysis Hua-Wei Zhou, 2014-01-23 Modern introduction to seismic data processing demonstrating exploration and global geophysics applications through real data and tutorial examples that can be demonstrated with the instructor's software of choice The underlying physics and mathematics of analysis methods is presented showing students the limitations and potential for creating models of the sub surface **Technologies for Improving the Evaluation and Repair of Concrete Bridge Decks**, 1998 Frontiers Of Remote Sensing Information Processing Chi Hau Chen, 2003-07-07 Written by leaders in the field of remote sensing information processing this book covers the frontiers of remote sensors especially with effective algorithms for signal image processing and pattern recognition with remote sensing data Sensor and data fusion issues SAR images hyperspectral images and related special topics are also examined Techniques making use of neural networks wavelet transforms and knowledge based systems are emphasized A special set of three chapters is devoted to seismic analysis and discrimination In summary the book provides an authoritative treatment of major topics in remote sensing information processing and defines new frontiers for these areas

Applied Geophysics W. M. Telford, L. P. Geldart, R. E. Sheriff, 1990-10-26 This is the completely revised and updated version of the popular and highly regarded textbook Applied Geophysics It describes the physical methods involved in exploration for hydrocarbons and minerals which include gravity magnetic seismic electrical electromagnetic radioactivity

and well logging methods All aspects of these methods are described including basic theory field equipment techniques of data acquisition data processing and interpretation with the objective of locating commercial deposits of minerals oil and gas and determining their extent In the fourteen years or so since the first edition of Applied Geophysics many changes have taken place in this field mainly as the result of new techniques better instrumentation and increased use of computers in the field and in the interpretation of data The authors describe these changes in considerable detail including improved methods of solving the inverse problem specialized seismic methods magnetotellurics as a practical exploration method time domain electromagnetic methods increased use of gamma ray spectrometers and improved well logging methods and interpretation
