Seizures Medical Causes And Management:

Seizures Norman Delanty,2001-11-27 Seizures are frightening events They frighten the patients who experience them they frighten those who witness them they also frighten many physicians who have to deal with them Most individuals with seizures present to family physicians or to emergency room physicians However despite the fact that seizures are among the most common neurological conditions most general practitioners family practice specialists and internists do not see large numbers of patients with seizures Given the apoplectic appearance of generalized tonic clonic convulsions it is not difficult to understand why they arouse such emotional responses in those that experience them those that witness them and those whose care is sought for them Seizures are symptoms of something wrong with the brain Many different kinds of perturbations in brain anatomy chemistry or physiology can produce seizures For many individuals seizures occur in the context of an acute illness and will not recur once that illness is treated These individuals do not have epilepsy They have transient disturbances in brain function attributable to systemic medical conditions It is important to recognize these issues because first the seizure may be the initial or even only manifestation of the underlying medical problem and this needs to be recognized

Pfeiffer, Ivan Bodis-Wollner, 2007-11-10 Parkinson's Disease and Nonmotor Dysfunction fills a major gap in the current rapidly growing body of knowledge concerning Parkinson's disease Drs Pfeiffer and Bodis Wollner have correctly perceived that many nonmotor features of Parkinson's disease are given insufficient attention in the medical literature Unfortunately they are often also given insufficient attention by the practicing neurologists who see these patients As recently pointed out there is clearly much more to Parkinson's disease than depletion of the nigrostriatal dopamine system 1 Parkinson's disease not just a multiple system atrophy is a multisystem disorder both pathologically and in its clinical manifestations This is clearly true for the various motor system abnormalities which are not fully corrected by dopamine replacement therapy strategies but also for the nonmotor system abnormalities that are the subject of this volume Although recently there has been increased awareness of the cognitive psychiatric and sleep disorders commonly associated with Parkinson's disease many of their manifestations remain under recognized and their importance in managing patients is underestimated Even less attention is paid to the myriad of other nonmotor disturbances that plague these patients For example among the autonomic disorders although orthostatic hypotension is well recognized it is usually attributed to dopaminergic medications rather than to effects of the underlying disease Urologic disorders are also very familiar in these patients but may not be properly understood or well managed *Multiple Sclerosis* Michael Olek, 2007-10-27 A synthesis of current concepts about the evaluation treatment
