Selected Classical Papers:

Selected Classical Papers David Roy Shackleton Bailey, 1997 The present volume collects in one place the most important of Shackleton Bailey's very numerous papers on classical topics which were originally published in a wide variety of journals around the world The papers cover the chronological spread of the author's work and are centered around the fields of Roman history textual criticism studies of classical scholars and important reviews of the textual or historical work of contemporary classicists

Selected Papers Herbert Robbins, 2012-12-06 Herbert Robbins is widely recognized as one of the most creative and original mathematical statisticians of our time The purpose of this book is to reprint on the occasion of his seventieth birthday some of his most outstanding research In making selections for reprinting we have tried to keep in mind three potential audiences 1 the historian who would like to know Robbins' seminal role in stimulating a substantial proportion of current research in mathematical statistics 2 the novice who would like a readable conceptually oriented introduction to these subjects and 3 the expert who would like to have useful reference material in a single collection In many cases the needs of the first two groups can be met simultaneously A distinguishing feature of Robbins' research is its daring originality which literally creates new specialties for subsequent generations of statisticians to explore Often these seminal papers are also models of exposition serving to introduce the reader in the simplest possible context to ideas that are important for contemporary research in the field An example is the paper of Robbins and Monro which initiated the subject of stochastic approximation We have also attempted to provide some useful guidance to the literature in various subjects by supplying additional references particularly to books and survey articles with some remarks about important developments in these areas

Stachel, 2012-12-06 The decision to undertake this volume was made in 1971 at Lake Como during the Varenna summer school of the Italian Physical Society where Professor Leon Rosenfeld was lecturing on the history of quantum theory We had long been struck by the unique blend of epistemological historical and social concerns in his work on the foundations and development of physics and decided to approach him there with the idea of publishing a collection of his papers He responded enthusiastically and agreed to help us select the papers furthermore he also agreed to write a lengthy introduction and to comment separately on those papers that he felt needed

critical re evaluation in the light of his current views For he was still vigorously engaged in both theoretical investigations of and critical not reflections on the foundations of theoretical physics We certainly did conceive of the volume as a memorial to a living saint but rather more practically as a useful tool to place in the hands of fellow workers and students engaged in wrestling with these difficult problems All too sadly fate has added a memorial aspect to our labors We agreed that in order to make this book most useful for the contemporary community of physicists and philosophers we should translate all non English items into English *A Reader's Guide to Classic Papers in Formal Semantics* Louise McNally,Zoltán Gendler Szabó,2022-08-05
