Stirling,2003-07-03 In our day to day lives we constantly make decisions which are simply good enough rather than optimal Most computer based decision making algorithms on the other hand doggedly seek only the optimal solution based on rigid criteria and reject any others In this book Professor Stirling outlines an alternative approach using novel algorithms and techniques which can be used to find satisficing solutions Building on traditional decision and game theory these techniques allow decision making systems to cope with more subtle situations where self and group interests conflict perfect solutions can t be found and human issues need to be taken into account in short more closely modelling the way humans make decisions The book will therefore be of great interest to engineers computer scientists and mathematicians working on artificial intelligence and expert systems

Games, Groups, and the Global Good Simon A. Levin,2009-06-09 How do groups form how do institutions come into being and when do moral norms and practices emerge This volume explores how game theoretic approaches can be extended to consider broader questions that cross scales of organization from individuals to cooperatives to societies Game theory strategic formulation of central problems in the analysis of social interactions is used to develop multi level theories that examine the interplay between individuals and the collectives they form The concept of cooperation is examined at a higher level than that usually addressed by game theory especially focusing on the formation of groups and the role of social norms in maintaining their integrity with positive and negative implications The authors suggest that conventional analyses need to be broadened to explain how heuristics like concepts of fairness arise and become formalized into the ethical principles embraced by a society **The Sports Hall of Fame Encyclopedia** David Blevins,2012 Provides a comprehensive listing
