Maki, Peter Shea, 2023-07-03 Responding to both the trend towards increasing online enrollments as the demand for face to face education declines and to the immediate surge in remote learning owing to the COVID 19 pandemic this book provides vital guidance to higher education institutions on how to develop faculty capacity to teach online and to leverage the affordances of an ever increasing array of new and emerging learning technologies This book provides

higher education leaders with the context they need to position their institutions in the changing online environment and with guidance to build support in a period of transition. It is intended for campus leaders and administrators who work with campus teams charged with identifying learning technologies to meet an agreed upon program or institution level educational needs for those coordinating across campus to build consensus on implementing online strategies and for instructional designers, faculty developers and assessment directors who assist departments and faculty effectively integrate learning technologies into their courses and programs. It will also appeal to faculty who take an active interest in improving online teaching. The contributors to this volume describe the potential of artificial intelligence algorithms such as those that fuel learning analytics software that mines LMS data to enable faculty to quickly and efficiently assess individual students' progress in real time, prompting either individual attention or the need to more generally clarify concepts for the class as a whole. They describe and provide access to a hybrid professional development MOOC and an associated WIKI that curate information about a wide range of learning software solutions currently available and present case studies that offer guidance on building the buy in and consensus needed to successfully integrate learning technologies into course program and institution level contexts. In sum, this book provides readers with a comprehensive understanding of the technological capabilities available to them and identifies collaborative processes related to engaging and building institutional support for the changes needed to provide the rapidly growing demand for effective and evidence based online learning.

Circular - Office of Education United States. Office of Education, 1930 Celestial Horizons John C. Rosemergy, 1977 Discusses the development of astronomy, the solar system and universe, radiation and stellar evolution and includes suggested activities and additional readings Catalogue and Register University of Michigan, 1911 Announcements for the following year included in some vols *Reconstructing Earth's Climate History* Kristen St. John, R. Mark Leckie, Kate Pound, Megan Jones, Lawrence Kressek, 2021-06-25 *Reconstructing Earth's Climate History* There has never been a more critical time for students to understand the record of Earth's climate history as well as the relevance of that history to understanding Earth's present and likely future climate. There also has never been a more critical time for students as well as the public at large to understand how we know as much as what we know in science. This book addresses these needs by placing you, the student, at the center of learning. In this book you will actively use inquiry based explorations of authentic scientific data to develop skills that are essential in all disciplines: making observations, developing and testing hypotheses, reaching conclusions based on the available data, recognizing and acknowledging uncertainty in scientific data and scientific conclusions, and communicating your results to others. The context for understanding global climate change today lies in the records of Earth's past as preserved in archives such as sediments and sedimentary rocks on land and on the seafloor as well as glacial ice, corals, speleothems and tree rings. These archives have been studied for decades by geoscientists and paleoclimatologists. Much like detectives, these researchers work to reconstruct what happened in the past as well as when and how it happened based on

the often incomplete and indirect records of those events preserved in these archives This book uses guided inquiry to build your knowledge of foundational concepts needed to interpret such archives Foundational concepts include interpreting the environmental meaning of sediment composition determining ages of geologic materials and events supported by a new section on radiometric dating and understanding the role of CO₂ in Earth's climate system among others Next this book provides the opportunity for you to apply your foundational knowledge to a collection of paleoclimate case studies The case studies consider long term climate trends climate cycles major and or abrupt episodes of global climate change and polar paleoclimates New sections on sea level change in the past and future climate change and life and climate change and civilization expand the book's examination of the causes and effects of Earth's climate history In using this book we hope you gain new knowledge new skills and greater confidence in making sense of the causes and consequences of climate change Our goal is that science becomes more accessible to you Enjoy the challenge and the reward of working with scientific data and results

Reconstructing Earth's Climate History Second Edition is an essential purchase for geoscience students at a variety of levels studying paleoclimatology paleoceanography oceanography historical geology global change Quaternary science and Earth system science *Baynham's Elocution, select readings* George Walter Baynham, 1892 **Journal of Geoscience Education** ,2006 *Soviet Science and Technology* ,1987 **Environmental Science** Michael L.
