with the revolutionary breakthrough to the nature of the gene countless new possibilities were being opened for the exploration of the molecular basis of development The resources offered by metamorphic changes offered unique opportunities to trace the path from gene to phenotype Our expectations were high I visited Larry Gilbert and Earl Frieden in their laboratories and saw with envy how far advanced they were then in the use of molecular methods of analysis I had started on a different approach to develop an in vitro test for thyroid action on amphibian tissue But circumstances limited my own progress to the initial delimitation of the technical possibilities of the in vitro system Only from the sidelines could I watch the steady if slow progress of biology in penetrating the maze of molecular events by which animal tissues respond to hormonal and other developmental factors
