e-Learning in Aviation Suzanne Kearns,2016-04-29

Whereas traditional classroom instruction requires pilots to be pulled off the line a training facility to be maintained and instructors to be compensated e learning is extremely cost effective and therefore an attractive alternative

However e learning only saves money if the training is effective Eager to reap financial benefits e learning courses have a history of varying dramatically in quality

The poorest courses are those that directly convert classroom based presentations to an online format not recognizing that computer based instruction is an entirely different medium

Addressing this issue directly e Learning in Aviation explores the characteristics of computer based course design and multimedia that are associated with improved learning

It then provides guidance regarding how to use research based instructional design principles to plan design develop and implement an e Learning course within an aviation organization

and continually evaluate whether or not the course is accomplishing instructional goals A blended learning strategy which incorporates both face to face and computer based instruction is suggested as the most appropriate choice for the majority of aviation companies

The goal of this approach is to utilize e Learning as a tool to reduce time at the training centre and thereby increase pilot productivity and potentially improve the quality of training

Although the examples within this book focus on pilot training the suggestions and guidelines are applicable to all employee groups within the industry
