Natural Colours For Food And Other Uses:

Natural Food Colorants J.D. Houghton, G.A.F. Hendry, 2012-12-06 In this second edition of *Natural Food Colorants* two new chapters have been added and we have taken the opportunity to revise all the other chapters. Each of the original authors have brought up to date their individual contributions involving in several cases an expansion to the text by the addition of new material. The new chapters are on the role of biotechnology in food colorant production and on safety in natural colorants two areas which have undergone considerable change and development in the past five years. We have also persuaded the publishers to indulge in a display of colours by including illustrations of the majority of pigments of importance to the food industry. Finally we have rearranged the order of the chapters to reflect a more logical sequence. We hope this new edition will be greeted as enthusiastically as the first. It remains for us as editors to thank our contributors for undertaking the revisions with such thoroughness and to thank Blackie A P for their support and considerable patience. Food Additive User's Handbook J. Smith, 2013-11-11 The aim of this book is to present technical information about the additives used in food product development in a concise form. Food product development is an activity which requires application of technical skills and the use of a diverse range of information. Normally this information is scattered throughout the vast food science literature in journals and books and in technical publications from the various suppliers. It has been my experience through consulting with the food industry that there is a need for information on food additives in a quick to use form in tables and figures where possible. Time wasted during information retrieval causes delay in practical development work which results in delay of product launch and possibly the loss of market advantage. This handbook will be used by food product development staff and by all food scientists requiring access to information on food additives in a quick to use format. Some knowledge of food science is assumed. Each chapter contains a bibliography which can be consulted if further information is required. Local legislation will have to be consulted to determine the legality of use of the additive in which foods and at what level of addition. Information on safety can be found in *Food Additives Handbook* 1989 by R I Lewis published by Van Nostrand Reinhold New York

The Complete Book on Spices & Condiments (with Cultivation, Processing & Uses) 2nd Revised Edition NIIR Board of Consultants & Engineers, 2006-04-01

The term spices and condiments applies to such natural plant or vegetable products and mixtures thereof used in whole or ground form mainly for imparting flavor, aroma and piquancy to foods and also for seasoning of foods, beverages like soups. The great mystery and beauty of spices is their use, blending and ability to change and enhance the character of food. Spices and condiments have a special significance in various ways in human life because of its specific flavours, taste and aroma. Spices and condiments play an important role in the national economies of several spice producing, importing and exporting countries. India is one of the major spice producing and exporting countries. Most of the spices and herbs have active principles in them and development of these through pharmacological and preclinical and clinical screening would mean expansion of considerable opportunities for successful commercialization of the product. Spices can be used to create these health promoting products. The active components in the spices: phthalides, polyacetylenes, phenolic acids, flavanoids, coumarines, triterpenoids, saponins and monoterpenes are powerful tools for promoting physical and emotional wellness. India has been playing a major role in producing and exporting various perennial spices like cardamoms, pepper, vanilla, clove, nutmeg and cinnamon over a wide range of suitable climatic situations. To produce good quality spice products, attention is required not only during cultivation but also at the time of harvesting, processing and storing. Not as large as in the days when next to gold, spices were considered most worth the risk of life and money. The trade is still extensive and the oriental demand is as large as ever. Some of the fundamentals of the book are: definition of spices and condiments, nomenclature or classification of spices and condiments, Indian central spices and cashew nut, committee origin, properties and uses of spices, forms, functions and applications of spices, trends in the world of spices, yield and nutrient uptake by some spice crops grown in sodic soil, tissue culture and in vitro conservation of spices, in vitro responses of piper species on activated charcoal, supplemented media, soil, agro-climatic planning for sustainable spices, production potentials of biotechnology in the improvement of spice crops, medicinal applications of spices and herbs, medicinal properties and uses of seed spices, effect of soil solarization on chillies, spice oil and oleoresin from fresh, dry spices etc. The present book contains cultivation, processing and uses of various spices and condiments which are well known for their multiple uses in every house all over the world. The book is an invaluable resource for new entrepreneurs, agriculturists, agriculture universities and technocrats.
