**The Politics of Global Resources** James E. Harf, B. Thomas Trout, 1986 Harf begins with a description of the historical patterns and the contemporary character of the international system and shows why it is difficult for the world community to address today's issues. He provides essential information on four specific issues used as case studies: food, actors, energy, values, population, policy, and environment. Futures and summarizes how far the global community has solved these issues and what tasks remain. ISBN 0 8223 0623 9 pbk 14 95

**Battleground: Environment** Robin Morris Collin, 2008-07-30 The environment inflames passions in people on all points of the political spectrum. Controversies over such issues as the rise of cancer in industrialized countries, climate change, and urban sprawl have skyrocketed as we recognize the impact that humans have on the environment. Many people become immersed in these controversies at a local level before they know much about the topic. The nuances of many environmental conflicts are often overlooked as the media focuses on the adversarial nature of the conflict. This reference resource provides students, teachers, librarians, and citizens as a whole with the necessary first step in understanding these hot button issues. Each entry identifies the issue involved, who was holding various points of view or positions, where and when the conflict occurred, and explains the cultural, social, and political context and dimensions of the conflict. Battleground: Environment provides in-depth analysis of over 100 of the most controversial topics involving the environment, including childhood asthma, the Kyoto Summit, and Treaty of Smart Growth, the Three Gorges Dam in China, and genetically modified food. Entries include descriptions of public policies and discussions of the future of the controversy. Each entry concludes with cross references and a short relevant bibliography suitable for student research. The resource includes numerous sidebars that discuss in detail particular local controversies that illuminate the complexity of the topics discussed.

**Principles of International Environmental Law** Philippe Sands, 2003-10-09 This second edition of Philippe Sands's leading textbook on international environmental law provides a clear and authoritative introduction to the subject, revised to December 2002. It considers relevant new topics including the Kyoto Protocol, genetically modified organisms, oil pollution, chemicals, etc. and will remain the most comprehensive account of the principles and rules relating to environmental protection and the conservation of natural resources. In addition to the key material from the 1992 Rio Declaration and subsequent developments, Sands also covers topics including the legal and institutional framework, the field's historic development, and standards for general application. This will continue to be an invaluable resource for both students and practitioners alike.

**Principles of International Environmental Law I**

Philippe Sands,1995 This post UNCED account of the frameworks standards and implementation of the international environmental law is intended for undergraduates and academics in the fields of international law politics geography economics and environmental studies It can be used on its own as a reference or course text or in conjunction with its companion collections of documents     **Legal Admissions** U.S. Commission on Immigration Reform,1997     Ozone Connections Penelope Canan,Nancy Reichman,2017-09-08 It is difficult to think of a more significant example of international cooperation to address a problem that threatened the health and wellbeing of the entire planet than the 1987 Montreal Protocol for the Elimination of Ozone Depleting Substances This breakthrough in international environmental governance has proved to be an extraordinary success beyond rhetoric or promises In a dozen years this international agreement went from an understanding of the need to act in a precautionary manner for mutual benefit to a successful worldwide effort to eliminate chemical substances harmful to our protective ozone layer The production and consumption of most ozone depleting substances has now been phased out in developed countries with developing countries not far behind What happened and why is of tremendous importance for those looking for guidance in the future particularly those now involved in hugely complicated negotiations on climate change The success of the Montreal Protocol has been linked to many factors such as political will treaty flexibility and the recognition of equity issues raised by developing countries While comprehensively analysing all of these success factors Ozone Connections goes on to suggest that a social organization of global governance as typified by the protocol s Technical and Economic Assessment Panel TEAP was a unique but replicable decisive factor The book argues that we need to understand how the implementation of complex global environmental agreements depends on the construction and exploitation of social connections among experts who act collectively to define solutions to environmental problems This highly original and provoking thesis synthesises some of the more exciting social science concepts and methods while refining our basic understanding of environmental social change and providing policy makers with concrete success factors to replicate This book will be essential reading for academics in the fields of sociology political science international relations network studies human communication motivation collaboration and leadership as well as the burgeoning interdisciplinary field of environmental studies Businesses will also find many applications for practical use Finally the many directly transferable lessons from ozone layer protection make this book a key addition to the growing literature on climate change     The International Politics of the Environment Andrew Hurrell,Benedict Kingsbury,1992 This book brings together leading specialists to assess the strengths limitations and potential of the international political system for global environmental management     Legal Admissions ,1997     *Energy Abstracts for Policy Analysis* ,1987     **The Politics of Global Resources** James E. Harf,B. Thomas Trout,1986     The New Politics of Strategic Resources David Steven,Emily O'Brien,Bruce D. Jones,2014-11-21 Since 2008 energy and food markets those most fundamental to human existence have remained in turmoil Resource scarcity has had a much bigger global impact in recent

years than has been predicted with ongoing volatility a sign that the world is only part way through navigating a treacherous transition in the way it uses resources Scarcity and perceptions of scarcity increase political risks while geopolitical turmoil exacerbates shortages and complicates the search for solutions The New Politics of Strategic Resources examines the political dimensions of strategic resource challenges at the domestic and international levels For better or worse energy and food markets are shaped by perceptions of national interest and do not behave as traditional market goods So while markets are an essential part of any response to tighter resource supplies governments also will play a key role David Steven Emily O'Brien Bruce Jones and their colleagues discuss what those roles are and what they should be The architecture for coordinating multilateral responses to these dynamics has fallen short raising questions about the effective international management of these issues Politics impede here too as the major powers must negotiate political and security trade offs to cooperate on the design of more robust international regimes and mechanisms for resource security and the provision of global public goods This timely volume includes chapters on major powers United States India China and key suppliers Russia Saudi Arabia The contributors also address thematic topics such as the interaction between oil and state fragility the changing political dynamics of climate change and the politics of resource subsidies *The Global 2000 Report* United States. Congress. Joint Economic Committee. Subcommittee on International Economics, 1980

**The Political Economy of African Famine** R. E. Downs, Donna O. Kerner, Stephen P. Reyna, 2019-07-19 Originally published in 1991 This volume explores the combination of political and economic forces that influence different levels of food supply The book begins with a discussion of famine theories ranging from cultural ecology to neo Marxism Following this survey is a series of essays by anthropologists geographers economists and development practitioners that explores the role of Western institutions in African famine analyzes famine in particular countries and documents the relationship between famine and gender This book takes an unusually broad look at famine by including analyses of countries where hunger has rarely been studied and by examining African famine from both African and Western perspectives Its concluding proposals for eradicating famine make innovative and provocative contributions to current global debates on food and nutrition *Global Resource Scarcity* Marcelle C. Dawson, Christopher Rosin, Nave Wald, 2017-11-02 A common perception of global resource scarcity holds that it is inevitably a catalyst for conflict among nations yet paradoxically incidents of such scarcity underlie some of the most important examples of international cooperation This volume examines the wider potential for the experience of scarcity to promote cooperation in international relations and diplomacy beyond the traditional bounds of the interests of competitive nation states The interdisciplinary background of the book's contributors shifts the focus of the analysis beyond narrow theoretical treatments of international relations and resource diplomacy to broader examinations of the practicalities of cooperation in the context of competition and scarcity Combining the insights of a range of social scientists with those of experts in the natural and bio sciences many of whom work as resource practitioners outside the context of universities the

book works through the tensions between thinking theory and doing practice which so often plague the process of social change. These encounters with scarcity draw attention away from the myopic focus on market forces and allocation and encourage us to recognise more fully the social nature of the tensions and opportunities that are associated with our shared dependence on resources that are not readily accessible to all. The book brings together experts on theorising scarcity and those on the scarcity of specific resources. It begins with a theoretical reframing of both the contested concept of scarcity and the underlying dynamics of resource diplomacy. The authors then outline the current tensions around resource scarcity or degradation and examine existing progress towards cooperative international management of resources. These include food and water scarcity, mineral exploration and exploitation of the oceans. Overall, the contributors propose a more hopeful and positive engagement among the world's nations as they pursue the economic and social benefits derived from natural resources while maintaining the ecological processes on which they depend.
