Politics Of Mobility Transport The Environment And Public Policy:

The Politics of Mobility Geoff Vigar, 2013-09-05 The Politics of Mobility presents case studies of local transport policy making and in depth analysis of UK national transport policy in the period 1987 2000 to highlight how policy was promoted and resisted Automobility and the City in Twentieth-Century Britain and Japan Simon Gunn, Susan C.

Townsend, 2019-08-22 Automobility and the City in Twentieth Century Britain and Japan is the first book to consider how mass motorization reshaped cities in Japan and Britain during the 20th century Taking two leading motor cities Nagoya and Birmingham as their principal subjects Simon Gunn and Susan C Townsend show how cars changed the spatial form and individual experience of the modern city and reveal the similarities and differences between Japan and Britain in adapting to the motor age The book has three main themes the place of automobility in post war urban reconstruction the emerging conflict between the promise of mobility and personal freedom offered by the car and its consequences for the urban environment the M E dilemma and the extent to which the Anglo Japanese comparison can throw light on fundamental differences in cultural understanding of the environment urbanism and the self The result is the first comparative history of mass automobility and its environmental consequences between East and West The Routledge Handbook of Public Transport Corinne Mulley, John Nelson, Stephen Ison, 2021-05-12 The Routledge Handbook of Public Transport is a reference work of chapters providing in depth examination of the current issues and future developments facing public transport Chapters in this book are dedicated to specific key topics identifying the challenges therein and pointing to emerging areas of research and concern The content is written by an international group of expert contributors and is enhanced through contributions from practitioners to deliver a broader perspective The Handbook deals with public transport policy context modal settings public transport environment public transport delivery issues smart card data for planning and the future of public transport This comprehensive reference work will be a vital source for academics researchers and transport practitioners in public transport management transport policy and transport planning *Road Pricing, the Economy and the Environment* C. Jensen-Butler, Brigitte Sloth, Morten M. Larsen, Bjarne Madsen, Otto A. Nielsen, 2008-01-24 Economic growth and globalisation create traffic growth leading to congestion which again increases travel times and costs Road pricing is an instrument that may efficiently reduce the negative impacts This volume is a collection of research papers on the use of road pricing The focus is on passenger transport and the papers cover a wide range of approaches including theoretical modelling and empirical studies of road pricing experience from different cities Transport, Environment And Society Cahill,

Michael, 2010-02-01 The environmental consequences of our transport system in the shape of pollution and carbon emissions are well known Not so clear are the social consequences of contemporary transport and mobility policy Readers are introduced to the complexity of the relationship between transport and society together with the debates about the social inequalities produced by the transport system and the connection between social inequality social exclusion and transport

disadvantage This book explores the social inequalities which result from the ways we travel connecting these to the key areas of social policy Reviewing the evidence on the social impact of transport the book discusses the ways in which a sustainable transport policy could emerge Handbook of Transportation and Public Policy Anthony Perl,Rosalie Singerman Ray,Louise Reardon,2025-01-09 This cutting edge Handbook explores the many ways in which politics influences transportation policy planning and implementation as well as the effects of transportation on political processes It rigorously analyses the complex interrelation between administration politics and transportation presenting theoretical and empirical insights into the governance approaches required to advance transportation s contribution to social and ecological wellbeing

Transport Policy: Learning Lessons from History Colin Divall,Julian Hine,2017-05-15 The key aim of this volume is to demonstrate ways in which an understanding of history can be used to inform present day transport and mobility policies This is not to say that history repeats itself or that every contemporary transport dilemma has an historical counterpart rather the contributors to this book argue that in many contexts of transport planning a better understanding of the context and consequences of past decisions and processes could lead to more effective policy decisions Collectively the authors explore the ways in which the methods and approaches of historical research may be applied to contemporary transport and policy issues across a wide range of transport modes and contexts By linking two bodies of academic research that for the most part remain separate this volume helps to inform current transport and mobility policies and to stimulate innovative new research that links studies of both past and present mobilities *Recent Advances in Traffic Engineering for Transport Networks and Systems* Elżbieta Macioszek,Grzegorz Sierpiński,2017-08-01 This book is a collation of numerous valuable guidelines for making decisions based on recent advances and improvement of transport systems Offering know how and discussing practical examples as well as decision making support systems it is of interest of those who face the challenge of seeking solutions to contemporary transport system problems on a daily basis including local authorities involved in planning and preparation of development strategies for specific transport related areas in both urban and regional dimension as well as representatives of business and industry who participate directly in the implementation of traffic engineering solutions The guidelines are provided in individual chapters making it possible to address the given problem in an advanced manner and simplify the choice of appropriate strategies including those related to increasing competitiveness of public transport identifying bus lines to potentially be serviced by electric buses pedestrian traffic solutions developing bike sharing systems safety conditions in road tunnels integrating supply chains or route planning support by means of technologically advanced systems and applications On the other hand since the book also addresses the new approach to theoretical models including traffic flow surveys and measurements transport behaviours capacity models delay modelling and road condition modelling it appeals to researchers and scientists studying this body of problems The book entitled Recent Advances in Traffic Engineering for Transport Networks and Systems includes selected papers submitted to and presented at the 14th Scientific

and Technical Conference Transport Systems Theory and Practice organised by the Department of Transport Systems and Traffic Engineering at the Faculty of Transport of the Silesian University of Technology The conference was held on 18 20 September 2017 in Katowice Poland Low Carbon Mobility Transitions Debbie Hopkins, James E. S. Higham, 2016 A thorough exploration of low carbon mobility transitions from a range of disciplinary and theoretical perspectives A broad view of low carbon transition across travel transport tourism and mobilities studies A critical exploration of the global regional and local prospects for low carbon mobility transitions Illustrating examples of low carbon transition from leading scholars researching in a wide range of geographic contexts Arranged in three interrelated sections People and Place Structures in Transition and Innovations for Low Carbon Mobility Low Carbon Mobility Transitions presents nineteen theoretically informed empirically grounded chapters and case studies that comprehensively address the prospects for global regional and local systemic transitions to low carbon mobility Bringing together the work of leading researchers from 26 universities research centres and consultancies spanning six continents it critically explores the wide ranging regional contexts in which a low carbon transition has been is being or can be achieved In doing so it highlights the place specific geopolitical and cultural sensitivities of low carbon transitions at national regional and local urban scales The overlapping roles of technological innovation behaviour change and policy frameworks are critically examined in this book providing timely insights into the opportunities for decarbonising the current systems of transport in order to achieve the radical emissions reductions required to prevent lasting impacts of climate change Highlights of the book include Multidisciplinary and interdisciplinary insights into low carbon mobility transitions Research informed chapters and case studies including a range of geographic contexts across the global North and South New perspectives on the intersecting and overlapping roles of technological innovation behaviour change and policy frameworks Expert assessments of systemic low carbon transition About the Editors Debbie Hopkins is a Research Fellow at the Transport Studies Unit School of Geography and the Environment University of Oxford UK and a Junior Research Fellow in Geography at Mansfield College Oxford James Higham is a Professor in the Department of Tourism University of Otago New Zealand Visiting Professor University of Stavanger Norway and co editor of the Journal of Sustainable Tourism Accessible Housing Robert Imrie, 2006 Accessible Housing considers the role and significance of house builders in influencing the design and construction of accessible housing that can meet the needs of disabled people Its primary focus is the speculative house building process and the construction of private for sale dwellings The book describes and evaluates the socio institutional political and technical relations that underpin the design and construction of housing These so it is argued shape builders reluctance to design and construct housing that is flexible to accommodate variations in bodily needs and performance Book jacket Mobility Peter Adey, 2017-05-23 Mobility aims to take the pulse of this enormously expanded and energetic field It explores the breadth of the disciplinary areas mobility studies now encompass examining the diverse conceptual and methodological approaches

wielded within the field and explores the utility of mobility to illuminate a cornucopia of mobile lives from the mass movements of individuals within global processes such as migration and tourism to homelessness and war from the entangled relations caught up in the movement of disease people and aid across borders to the inability of someone to cross over a road The new edition explores the more sustained elaboration of mobility studies within a wide variety of disciplinary approaches and subject matters It echoes the growing internationalization of mobility research reflected in diverse case studies from the Global South South Asia Latin America the Caribbean and so far under represented perspectives from China Australasia post socialist Eastern Europe the Middle East and elsewhere The book also features an additional chapter on mobility studies to survey and explore the diverse quality of the field and methodologies in order to reflect the growing diversity of methodological approaches to mobilities from walk alongs and critical cartography to the mobile arts The book offers an accessible reading of the way mobility has been tackled and understood neatly exploring and summarizing a topic that has exploded into different variations and nuances The text allows scholars and students alike to grasp the central importance of mobility to social cultural political economic and everyday terrains by providing accessible writings on key authors within key ideas and case study boxes suggested further readings and summaries while at the same time making a significant contribution to scholarly writings and debates

Mobilities: New Perspectives on Transport and Society John Urry, 2016-04-22 Bringing together the leading authors currently working at the intersection of social science and transport science this volume provides a companion to the well established and extensive international Transport and Society series Each chapter and the volume as a whole offers closer and richer consideration of the issues practices and structures of multiple mobilities which shape the current world but which have typically been overlooked or minimised What this approach seeks to do is not only draw attention to many new areas of research and investigation relating to mobile lives but also to point to new theories and methods by which such lives have to be researched and examined Such new theories and methods are relevant both to rethinking transport studies as such but are also recasting societal studies as transport so that it comes out of the ghetto and enters mainstream social science

Landscape and the Ideology of Nature in Exurbia K. Valentine Cadieux, Laura Taylor, 2013-05-07 This book explores the role of the ideology of nature in producing urban and exurban sprawl It examines the ironies of residential development on the metropolitan fringe where the search for nature brings residents deeper into the world from which they are imagining their escape of Federal Express technologically mediated communications global supply chains and the anonymity of the global marketplace and where many of the central features of exurbia very low density residential land use monster homes and conversion of forested or rural land for housing contribute to the very problems that the social and environmental aesthetic of exurbia attempts to avoid The volume shows how this contradiction to live in the green landscape and to protect the green landscape from urbanization gets caught up and represented in the ideology of nature and how this ideology in turn constitutes and is constituted by the landscapes

distance trains whose operators have fought hard to stave off competition from airliners and cars Transporting moments therefore presents strong case for preserving public transport as a more equitable and sustainable form of mobility Governments Australian or otherwise can use these insights for productive investment in their rail networks and public transportation service in general and for reducing the nation's addiction to the automobile With its invaluable insights into travelling on trains Transporting moments is a fascinating addition to the growing corpus of literature on day to day mobility

Methods and Models in Transport and Telecommunications Aura Reggiani, Laurie A. Schintler, 2006-03-30 One aspect of the new economy is a transition to a networked society and the emergence of a highly interconnected interdependent and complex system of networks to move people goods and information An example of this is the increasing reliance of networked systems e.g. air transportation networks electric power grid maritime transport etc on telecommunications and information infrastructure Many of the networks that evolved today have an added complexity in that they have both a spatial structure i.e. they are located in physical space but also an additional spatial dimension brought on largely by their dependence on information technology They are also often just one component of a larger system of geographically integrated and overlapping networks operating at different spatial levels An understanding of these complexities is imperative for the design of plans and policies that can be used to optimize the efficiency performance and safety of transportation telecommunications and other networked systems In one sense technological advances along with economic forces that encourage the clustering of activities in space to reduce transaction costs have led to more efficient network structures At the same time the very properties that make these networks more efficient have also put them at a greater risk for becoming disconnected or significantly disrupted when super connected nodes are removed either intentionally or through a targeted attack

Urban Structure Matters Petter Naess, 2006-09-27 Going beyond previous investigations into urban land use and travel Petter Naess presents new research from Denmark on residential location and travel to show how and why urban spatial structures affect people's travel behaviour In a comprehensive case study of the Copenhagen metropolitan area Naess combines traditional quantitative travel surveys with qualitative interviews in order to identify the more detailed mechanisms through which urban structure affects travel behaviour The case study findings are compared with those from other Nordic countries and analyzed and evaluated in the light of relevant theory and literature to provide solid valuable conclusions for planning sustainable urban development With a broader range of statistics than previous studies and conclusions of international relevance Urban Structure Matters provides well grounded conclusions for how spatial planning of urban areas can be used to reduce car dependence and achieve a more sustainable development of cities

After Suburbia Roger Keil, Fulong Wu, 2022-08-31 After Suburbia presents a cross section of state of the art scholarship in critical global suburban research and provides an in depth study of the planet's urban peripheries to grasp the forms of urbanization in the twenty first century Based on cutting edge conceptual thought and steeped in richly detailed

empirical work conducted over the past decade After Suburbia draws on research from Asia Africa Australia Europe and the Americas to showcase comprehensive global scholarship on the urban periphery Contributors explicitly reject the traditional centre periphery dichotomy and the prioritization of epistemologies that favour the Global North especially North American cases over other experiences In doing so the book strongly advances the notion of a post suburban reality in which traditional dynamics of urban extension outward from the centre are replaced by a set of complex contradictory developments After Suburbia examines multiple centralities and diverse peripheries which mesh to produce a surprisingly contradictory and diverse metropolitan landscape

Demolishing Whitehall Adam Sharr, Stephen Thornton, 2016-12-05 This book is about a lost world albeit one less than 50 years old It is the story of a grand plan to demolish most of Whitehall London's historic government district and replace it with a ziggurat section megastructure built in concrete In 1965 the architect Leslie Martin submitted a proposal to Charles Pannell Minister of Public Building and Works in Harold Wilson's Labour government for the wholesale reconstruction of London's Government Centre Still reeling from war damage its eighteenth and nineteenth century palaces stood as the patched up headquarters of an imperial bureaucracy which had once dominated the globe Martin's plan by no means modest in conception scope or scale proposed their replacement with a complex that would span the roads into Parliament Square reframing the Houses of Parliament and Westminster Abbey The project was not executed in the manner envisaged by Martin and his associates although a surprising number of its proposals were implemented But the un built architecture is examined here for its insights into a distinctive moment in British history when a purposeful technological future seemed not just possible but imminent apparently sweeping away an anachronistic Edwardian establishment to be replaced with a new meritocracy forged in the white heat of technology The Whitehall plan had implications well beyond its specific site It was imagined by its architects as a scientific investigation into ideal building forms for the future an important development in their project to unify science and art For the political actors it represented a tussle between government departments between those who believed that Britain needed to discard much of its Victorian and Edwardian decoration in the name of professionalization and those who sought to preserve its ornate finery Demolishing Whitehall investigates these tensions between ideas of technology and history science and art socialism and el
