Organic Polymer Chemistry K. J. Saunders, 2013-03-09 This book deals with the organic chemistry of polymers which find technological use as adhesives fibres paints plastics and rubbers For the most part only polymers which are of commercial significance are considered and the primary aim of the book is to relate theoretical aspects to industrial practice The book is mainly intended for use by students in technical institutions and universities who are specializing in polymer science and by graduates who require an introduction to this field Several excellent books have recently appeared dealing with the physical chemistry of polymers but the organic chemistry of polymers has not received so much attention In recognition of this situation and because the two aspects of polymer chemistry are often taught separately this book deals specifically with organic chemistry and topics of physical chemistry have been omitted Also in this way the book has been kept to a reasonable size This is not to say that integration of the two areas of polymer science is undesirable on the contrary it is of the utmost importance that the inter relationship should be appreciated I wish to record my thanks to my colleagues with whom I have had many helpful discussions particularly Mrs S L Radchenko I also thank Miss E Friesen for obtaining many books and articles on my behalf and Mr H Harms for encouragement and assistance I am also grateful to Mrs M Stevens who skilfully prepared the manuscript Department of Chemical and Metallurgical Technology Ryerson Polytechnical Institute K J S **Ion Exchange and Solvent Extraction** Arup K. Perfumes, Cosmetics and Soaps W.A. Poucher, 2012-12-06 During the past decade there have been many changes in the perfumery industry which are not so much due to the discovery and application of new raw materials but rather to the astronomic increase in the cost of labour required to produce them This is reflected more particularly in the flower industry where the cost of collecting the blossoms delivered to the factories has gone up year after year so much so that most flowers with the possible exception of Mimosa have reached a cost price which has compelled the perfumer to either reduce his purchases of absolutes and concretes or alternatively to substitute them from a cheaper source or even to discontinue their use This development raises an important and almost insoluble problem

for the perfumer who is faced with the necessity of trying to keep unchanged the bouquet of his fragrances and moreover to ensure no loss of strength and diffusiveness Of course this problem applies more especially to the adjustment of formulae for established perfumes because in every new creation the present high cost of raw materials receives imperative consideration before the formula is approved
