Update on Polymers for Pulmonary Drug Delivery Hugh D. C Smyth, 2013-04-30 Pulmonary drug delivery has been a rapidly expanding field moving from the traditional propellant based metered dose inhaler delivery of small asthma drugs to a broader landscape of new devices and novel drugs for local and systemic delivery. The field has greatly expanded yet the tools for pulmonary drug delivery systems have not kept pace with the potential applications. One of the key developments has been the use of polymers to achieve better control of pulmonary drug delivery. This has the potential to expand the toolbox available for researchers in the field to deliver their new chemical entities successfully to the lung. This book reviews the use of polymers in pulmonary drug delivery encompassing polymers from their use in devices and packaging in addition to their use as excipients in formulations delivered to the airways. The book is arranged by application and extensively reviews the technical and patent literature. This is the first volume totally dedicated to polymers in pulmonary drug delivery and should be the resource of choice for those in the field, especially managers in the pharma/biotech industry. Naturally the text will be of great interest to academics and graduate students. Finally regulatory affiliated scientists will also find this resource invaluable.

*Shape Memory Polymers and Textiles* Jinlian Hu, 2007-04-30 Shape memory polymers (SMPs) are smart materials that as a result of an external stimulus such as temperature can change from a temporary deformed shape back to an original shape. SMPs are finding an increasing use in such areas as clothing where they respond dynamically to changes in heat and moisture levels ensuring greater comfort for the wearer. Shape memory polymers and textiles provides an authoritative and comprehensive review of these important new materials and their applications. After an introductory chapter on the concept and definition of shape memory materials, the book reviews methods for synthesising, characterising and modelling SMPs. It goes on to consider the properties of particular materials such as shape memory polyurethane and environmentally sensitive polymer gels. The book concludes by assessing potential applications such as wrinkle free fabrics and smart fabrics providing improved protection and comfort.

for the wearer Shape memory polymers and textiles is a valuable guide to R D staff in such areas as textile apparel in developing a new generation of smart textiles and other products Reviews the structure synthesis and preparation of shape memory polymers Assesses methods for analysing and modelling shape memory properties An authoritative overview of particular fibres such as shape memory polyurethane SMPU      **Polymer Analysis** Barbara H. McGreavy, 2012-12-06 Approximately half of the world production of the petrochemical industry more than 100 million tonnes is in the form of polymers yet it would probably surprise most people to learn how much their lifestyle depends on polymers ranging as they do from detergents kitchenware and electrical appliances to furnishings and a myriad other domestic goods Still less are they likely to be aware of the extensive part they play in engineering applications for mechanical machine components and advanced high performance aircraft This versatility derives from the fact that polymeric materials are made up of a range of molecules of varying length whose properties are related to molecular structure and the proportions of the chains in the mixture For example polypropylene is a commodity polymer which is produced in hundreds of different grades to meet specific market requirements This depends on the catalyst as well as the operating conditions and reactor design A major area for growth is in substituting polymers for conventional materials such as ceramics and metals Not only can they match these materials in

terms of mechanical strength and robustness but they have very good resistance to chemical attack Polyamides for example are widely used for car bumpers and new polymers are being developed for engine manifolds and covers In 1993 there is typically 100 kg of various polymers used in cars and this is continually increasing giving a net weight reduction and hence better fuel economy
