Polymer Stabilization:

Chemical Physics of Polymer Degradation And Stabilization N. Nikolai Markovich Emanuel', Anatolii Leonidovich Buchachenko, 1987-06 **Fundamentals of Polymer Degradation and Stabilization** N.S. Allen, M. Edge, 1992-10-31

During the past decade the field of polymer degradation and stabilization has become a subject of central importance in polymer science and technology This book provides a fundamental source of information designed for those with only a basic understanding of the background of the field **Polymer Degradation and Stabilization** W. L. Hawkins, 2012-12-06

The development of polymers as an important class of material was inhibited at the first by the premature failure of these versatile compounds in many applications The deterioration of important properties of both natural and synthetic polymers is the result of irreversible changes in composition and structure of polymers molecules As a result of these reactions mechanical electrical and or aesthetic properties are degraded beyond acceptable limits It is now generally recognized that stabilization against degradation is necessary if the useful life of polymers is to be extended sufficiently to meet design requirements for long term applications Polymers degrade by a wide variety of mechanisms several of which affect all polymers through to varying degree This monograph will concentrate on those degradation mechanisms which result from reactions of polymers with oxygen in its various forms and which are accelerated by heat and or radiation Those stabilization mechanisms are discussed which are based on an understanding of degradation reaction mechanisms that are reasonably well established The stabilization of polymers is still undergoing a transition from an art to a science as mechanisms of degradation become more fully developed A scientific approach to stabilization can only be approached when there is an understanding of the reactions that lead to degradation Stabilization against biodegradation and burning will not be discussed since there is not a clear understanding of how polymers degrade under these conditions Kinetic and Thermodynamic Aspects of Polymer Stability Gennadii Efremovich Zaikov, 1996

Kinetic Thermodynamic Aspects of Polymer Stability The Structural Stabilization of Polymers: Fractal Models Kozlov, Gennady Zaikov, 2006-07-01

This monograph deals with the structural aspects of transport processes of gases physical ageing and thermo oxidative degradation of polymers in detail Fractal analysis cluster models of the polymer structure a s amorphous state as well as irreversible aggregation models are used as main structural models It is shown that the polymer structure **Photostabilization of Polymers** J.F. Rabek, 2012-12-06

During the last two decades the production of polymers and plastics has been increasing rapidly In spite of developing new polymers and polymeric materials only 40 60 are used commercially on a large scale It has been estimated that half of the annual production of polymers is employed outdoors Increasing the stability of polymers and plastics towards heat light atmospheric oxygen and other environmental agents and weathering conditions has always been a very important problem The photochemical instability of most of polymers limits them to outdoor application where they are photo degraded fast over periods ranging from months to a few years To the despair of technologists and consumers alike

photodegradation and environmental ageing of polymers occur much faster than can be expected from knowledge collected in laboratories. In many cases improved methods of preparation and purification of both monomers and polymers yield products of better quality and higher resistance to heat and light. However, without stabilization of polymers by application of antioxidants to decrease thermal oxidative degradation and photostabilizers to decrease photo oxidative degradation, it would be impossible to employ polymers and plastics in everyday use. **Polymer Stabilization** W. Lincoln Hawkins, 1971

Developments in Polymer Stabilisation—8 G. Scott, 2012-12-06 The purpose of the present series of publications is two fold. In the first place it is intended to review progress in the development of practical stabilising systems for a wide range of polymers and applications. A complementary and ultimately more important objective is to accommodate these practical developments within the framework of antioxidant theory, since there can be little question that further major advances in the practice of stabilisation technology will only be possible on the basis of a firm mechanistic foundation. Research into the role of stable free radicals as antioxidants and stabilisers for polymers has intensified in recent years. Nitroxyl radicals, nitroxides, were the earliest long lived radicals to be investigated in detail and Maslov and Zaikov review the developments that have taken place in understanding their reaction mechanisms from the time when they were first investigated in liquid hydrocarbon systems to the present day when their outstanding performance as light stabilisers has been the object of much scientific research. Although some features of their reactivity remain obscure, the authors approach the problem kinetically and indicate the factors limiting their effectiveness. *Polymer Stabilization and Degradation* Peter P. Klemchuk, 1985 [Handbook of Polymer Degradation](#) S. Halim Hamid, 2000-06-30 Covers recent advances in polymer degradation and stabilization. Focuses on the basics of photo and bio degradability. Delineates special and general environmental parameters such as solar irradiation, temperature and agrochemical exposure. Surveys plastic waste disposal strategies such as recycling, incineration, chemical recovery by pyrolysis and source reduction. **Polymer Reactivity** Gennadiĭ Efremovich Zaikov, 2006 This book is devoted to examining the order and disorder in polymers. Understanding these factors is important because they define diffusion properties, molecule motion speed in the polymeric matrix and the solubility of low molecular substances in polymers. [Polymer Yearbook 13](#) Richard A. Pethrick, Gennadi Zaikov, Teiji Tsuruta, Naoyuki Koide, 2019-08-22 Polymer Yearbook 13 brings together reviews and information on the progress of polymer science worldwide, including useful and topical information such as a list of new publications in polymer science and a compilation of dissertation abstracts. This volume includes reviews of key aspects of polymer science, including contributions from Russia and details of important publications. This volume also contains reviews on the state of the art Japanese research presented at the annual Spring and Fall meetings of the Japanese Polymer Science Society. The aim of this section is to make information on the progress of Japanese polymer science and on topics of current interest to polymer scientists in Japan more easily available worldwide. **Specialty Polymers** Faiz Mohammad, 2007 The synthetic counterparts of natural polymeric

materials are now finding applications as light weight mechanically strong and environmentally stable sheets fibers films adhesives paints and foams have replaced most of the commodity and structural materials The systematic research on the preparation characterization and utilization of plastics resulted in creation of polymers often containing a set of several desirable properties in a single polymer The polymers have established their place in engineering applications as well Although the bulk of plastics production focuses on relatively simple commodity polymers the proportion of specially designed and tailor made plastics for specific and sophisticated applications is also increasing at a great pace The specialty plastics as well as their use in specific and sophisticated applications are the key to the continued scientific growth and technological advances in the new millennium This book thoroughly covers today s rapidly growing field of specialty polymers and their applications in more sophisticated and specialized areas It gives the most recent in depth knowledge and extremely comprehensive details of the chemistry physics material science technology and device applications of specialty polymers This comprehensive book containing 16 chapters is the result of the untiring efforts of 35 most renowned experts from the national and international scientific community This book is thought provoking to the researchers working in the fields of chemistry biochemistry biotechnology medicine polymer chemistry semiconductor physics material science electrochemistry biology electronics photonics material science solid state physics nanotechnology electrical and electronics engineering optical engineering device engineering data storage etc

Polymer Degradation and Stabilisation

Norman Grassie, Gerald Scott, 1988-04-14 The study of polymer degradation and stabilisation is of considerable practical

importance as the industrial uses of polymeric materials continue to expand In this book the authors lucidly relate technological phenomena to the chemistry and physics of degradation and stabilisation processes Degradation embraces a variety of technologically important phenomena ranging from relatively low temperature processes such as weathering of plastics fatigue of rubbers through the processing of polymers in shearing mixers to very high temperature processes such as flammability and ablation All these technological phenomena have in common certain basic chemical reactions Thus weathering has its roots in photo oxidation fatigue and melt degradation in mechano oxidation and flammability and ablation in ablation in pyrolysis and vapour phase oxidation
