Low Environmental Impact Polymers Nick Tucker, Mark Johnson, 2004 In recent years the use of renewable resources as chemical feedstocks for the synthesis of polymeric materials has attracted considerable attention The reason for such activity is due to the finite nature of traditional petrochemical derived compounds in addition to economic and environmental considerations Thus a key goal of the coming years will be the development of sustainable raw materials for the chemical industry that will replace current fossil based feedstocks The challenge for researchers is to develop natural and manmade synthetics that would reduce the emission of gases This book gives a thorough overview of the manufacture and uses of low environmental impact polymers This book will provide information for the experienced user of polymers wanting to use biodegradable materials and also be useful to designers specifiers end users and waste managers
