FDI, Regionalism, Government Policy and Endogenous Growth Anthony Bende-Nabende,2018-08-20 Published in 1999 this text investigates whether FDI caused spill over effects which have led to the economic growth of the ASEAN 5 economies and if that it so whether the ASEAN Preferential Trade Agreement APTA had a significant effect in attracting FDI to the region It takes into account the different levels of economic development of the countries under analysis The results from the structural static model suggest that FDI has stimulated economic growth through the human factors followed by technology transfer international trade and learning by doing and that the formation of APTA had a lagged influence on FDI inflows into the advantage of the more developed member

countries and the disadvantage of the less developed countries Those from the multiplier dynamic effects analysis demonstrate that whereas the impact is immediate in the more developed politically stable and foreign investment friendly economies there is a time lag in those economies which are less developed and more hostile to FDI The analysis presents an empirical comparison of how the level of economic development affects the interaction of FDI regionalism and economic growth *A Data-pooling Approach to Estimate Employment Multipliers for Small Regional Economics* Jeff V.
