Reengineering The 2010 Census Risks And Challenges:

Reengineering the 2010 Census National Research Council, Division of Behavioral and Social Sciences and Education, Committee on National Statistics, Panel on Research on Future Census Methods, 2004-03-25 At the request of the U S Census Bureau the National Research Council's Committee on National Statistics established the Panel on Research on Future Census Methods to review the early planning process for the 2010 census This new report documents the panel's strong support for the major aims of the Census Bureau's emerging plan for 2010 At the same time it notes the considerable challenges that must be overcome if the bureau's innovations are to be successful The panel agrees with the Census Bureau that implementation of the American Community Survey and with it the separation of the long form from the census process are excellent concepts Moreover it concurs that the critically important Master Address File and TIGER geographic systems are in dire need of comprehensive updating and that new technologies have the potential to improve the accuracy of the count The report identifies the risks and rewards of these and other components of the Census Bureau's plan The report emphasizes the need for the bureau to link its research and evaluation efforts much more closely to operational planning and the importance of funding for a comprehensive and rigorous testing program before 2010 *Reengineering the 2010 Census* National Research Council, Division of Behavioral and Social Sciences and Education, PANEL ON RESEARCH ON FUTURE CENSUS METHODS., Committee on National Statistics, 2004-03-25 At the request of the U S Census Bureau the National Research Council's Committee on National Statistics established the Panel on Research on Future Census Methods to review the early planning process for the 2010 census This new report documents the panel's strong support for the major aims of the Census Bureau's emerging plan for 2010 At the same time it notes the considerable challenges that must be overcome if the bureau's innovations are to be successful The panel agrees with the Census Bureau that implementation of the American Community Survey and with it the separation of the long form from the census process are excellent concepts Moreover it concurs that the critically important Master Address File and TIGER geographic systems are in dire need of comprehensive updating and that new technologies have the potential to improve the accuracy of the count The report identifies the risks and rewards of these and other components of the Census Bureau's plan The report emphasizes the need for the bureau to link its research and evaluation efforts much more closely to operational planning and the importance of funding for a comprehensive and rigorous testing program before 2010 Reengineering the 2010 Census National Research Council, Division of Behavioral and Social Sciences and Education, Committee on National Statistics, Panel on Research on Future Census Methods, 2004-04-25 At the request of the U S Census Bureau the National Research Council's Committee on National Statistics established the Panel on Research on Future Census Methods to review the early planning process for the 2010 census This new report documents the panel's strong support for the major aims of the Census Bureau's emerging plan for 2010 At the same time it notes the considerable challenges that must be overcome if

the bureau's innovations are to be successful. The panel agrees with the Census Bureau that implementation of the American Community Survey and with it the separation of the long form from the census process are excellent concepts. Moreover, it concurs that the critically important Master Address File and TIGER geographic systems are in dire need of comprehensive updating and that new technologies have the potential to improve the accuracy of the count. The report identifies the risks and rewards of these and other components of the Census Bureau's plan. The report emphasizes the need for the bureau to link its research and evaluation efforts much more closely to operational planning and the importance of funding for a comprehensive and rigorous testing program before 2010. Council, Division of Behavioral and Social Sciences and Education, Committee on National Statistics, Panel on the Census Bureau's Reengineered Survey of Income and Program Participation, 2009-11-26. Beginning in 2006, the Census Bureau embarked on a program to reengineer the Survey of Income and Program Participation (SIPP) to reduce its costs and improve data quality and timeliness. The Bureau also requested the National Academies to consider the advantages and disadvantages of strategies for linking administrative records and survey data, taking account of the accessibility of relevant administrative records, the operational feasibility of linking the quality and usefulness of the linked data, and the ability to provide access to the linked data while protecting the confidentiality of individual respondents. In response, this volume first examines the history of SIPP and reviews the survey's purpose, value, strengths, and weaknesses. The book examines alternative uses of administrative records in a reengineered SIPP and finally considers innovations in SIPP design and data collection, including the proposed use of annual interviews with an event history calendar. *2010 Census* Mathew J. Measurement in the 2010 Census National Research Council, Division of Behavioral and Social Sciences and Education, Committee on National Statistics, Panel on Correlation Bias and Coverage Measurement in the 2010 Decennial Census, 2009-02-08. The census coverage measurement programs have historically addressed three primary objectives: 1 to inform users about the quality of the census counts; 2 to help identify sources of error to improve census taking; and 3 to provide alternative counts based on information from the coverage measurement program. In planning the 1990 and 2000 censuses, the main objective was to produce alternative counts based on the measurement of net coverage error. For the 2010 census coverage measurement program, the Census Bureau will deemphasize that goal and is instead planning to focus on the second goal of improving census processes. This book, which details the findings of the National Research Council's Panel on Coverage Evaluation and Correlation Bias, strongly supports the Census Bureau's change in goal. However, the panel finds that the current plans for data collection, data analysis, and data products are still too oriented towards measurement of net coverage error to fully exploit this new focus. Although the Census Bureau has taken several important steps to revise data

collection and analysis procedures and data products this book recommends further steps to enhance the value of coverage measurement for the improvement of future census processes

2010 Census: Census at Critical Juncture for Implementing Risk Reduction Strategies Matthew Scire, 2008-10 In 2007 the U S Census Bureau estimated the 2010 Census would cost 11.5 billion including 3 billion on automation and tech At a March 2008 hearing it was stated that the Field Data Collection Automation program was likely to incur significant cost overruns and announced a redesign effort This testimony is based on past work incl observation of the address canvassing dress rehearsal For IT acquisitions the author analyzed system documentation including deliverables cost estimates other acquisitions related documents and interviewed Census Bureau officials and contractors This testimony describes the implications of redesign for dress rehearsal and decennial operations IT acquisitions mgmt and Decennial Census costs

CEMAF as a Census Method David A. Swanson, Paula J. Walashek, 2011-03-28 In provocative terms that push the envelope of technical administrative and legal capabilities Swanson and Walashek propose a re vamped US census based neither on the current system self enumeration nor its predecessor door to door canvassing Instead they propose that it be built on a combination of four elements 1 administrative records 2 the continuously updated Master Address File 3 survey data and 4 modeling and imputation techniques They use Census Enhanced Master Address File CEMAF as a descriptive term for their proposal which is based on four principles and includes a proposal for an independent Census Bureau They argue that evidence suggests that the methods used to conduct traditional census counts may be at the end of their useful working lives as evidenced by increasing costs and declining response rates Some of their ideas will seem farfetched However Swanson and Walashek believe this is the time to discuss radical proposals as governments re examine the utility of traditional census counts and consider reductions as is the case in Canada and England This SpringerBriefs should be on the reading list of staff in statistical agencies grappling with rising costs and declining response rates as well as census stakeholders concerned about costs accuracy and census utility

2010 Decennial Census: Background and Issues , A Guidebook for Using American Community Survey Data for Transportation Planning National Cooperative Highway Research Program, 2007 Explores incorporating the U S Census Bureau s American Community Survey ACS data into the transportation planning processes at national state metropolitan and local levels The report examines ACS data and products and demonstrates their uses within a wide range of transportation planning applications

Differential Undercounts in the U.S. Census William P. O'Hare, 2019-02-13 This open access book describes the differences in US census coverage also referred to as differential undercount by showing which groups have the highest net undercounts and which groups have the greatest undercount differentials and discusses why such undercounts occur In addition to focusing on measuring census coverage for several demographic characteristics including age gender race Hispanic origin status and tenure it also considers several of the main hard to count populations such as immigrants the homeless the LBGT community children in foster care and the disabled

However given the dearth of accurate undercount data for these groups they are covered less comprehensively than those demographic groups for which there is reliable undercount data from the Census Bureau This book is of interest to demographers statisticians survey methodologists and all those interested in census coverage

The 2000 Census National Research Council, Division of Behavioral and Social Sciences and Education, Committee on National Statistics, Panel to Review the 2000 Census, 2004-03-30 The decennial census was the federal government's largest and most complex peacetime operation This report of a panel of the National Research Council's Committee on National Statistics comprehensively reviews the conduct of the 2000 census and the quality of the resulting data The panel's findings cover the planning process for 2000 which was marked by an atmosphere of intense controversy about the proposed role of statistical techniques in the census enumeration and possible adjustment for errors in counting the population The report addresses the success and problems of major innovations in census operations the completeness of population coverage in 2000 and the quality of both the basic demographic data collected from all census respondents and the detailed socioeconomic data collected from the census long form sample about one sixth of the population The panel draws comparisons with the 1990 experience and recommends improvements in the planning process and design for 2010 The 2000 Census Counting Under Adversity will be an invaluable resource for users of the 2000 data and for policymakers and census planners It provides a trove of information about the issues that have fueled debate about the census process and about the operations and quality of the nation's twenty second decennial enumeration
