Climate and Architecture United States. Housing and Home Finance Agency. Library, 1951 *City, Climate, and Architecture* Sascha Roesler, 2025-01-27 Second and revised edition The publication rethinks climate control a key concern of the discipline of architecture through the lens of city climate phenomena over the course of the 20th century Based on a history of climate control on urban scales it promotes the integration of indoors and outdoors in order to reduce environmental and thermal loads in cities Just as heating and cooling practices inside the buildings are affecting the urban climate outdoors urban heat islands are influencing the energy requirements and thermal conditions inside the buildings While the first part of the book focuses on the interwar period in Europe the publication's second part considers examples from all over the globe tracing the growing significance of ecological thinking for the design of urban environments Main outcome of a six years research project on architecture and urban climate funded by the Swiss National Science Foundation New and revised edition KLIMA POLIS a series highlighting design driven approaches to urban climates across the globe

Addressing the Climate in Modern Age's Construction History Carlo Manfredi, 2019-04-08 This book sheds light on environmental control in buildings from the 17th century onwards Even before building services became a hallmark of buildings in order to address increasing sanitary and comfort needs pioneering experiences had contributed to improve design skills of professionals After long being determined by passive features indoor climate became influenced by installations and plants representing the most significant shift of paradigm in the modern age's construction history This change was not without consequences and the book presents contributions showing the deep connection between architectural design comfort requirements and environmental awareness throughout the 19th century Taking into account the differences between different European countries the book is a valuable resource for architects designers and heritage professionals who are interested in environmental design enabling them to develop a deeper knowledge of heritage in order to address climate demands particularly going towards a future in which energy savings and fuel consumption reduction will dictate our behaviour It includes contributions by leading international experts Melanie Bauernfeind Marco Cofani Lino Vittorio Bozzetto Emmanuelle Gallo Alberto Grimoldi Dean Hawkes Angelo Giuseppe Landi Mattias Legner Oriel Prizeman and Henrik Schoenefeldt

Architecture Ali Sayigh, 2019-03-29 This book discusses applying vernacular strategies to modern architectural design to adhere to basic green principles of energy efficiency and materials utilization Written from an international perspective chapters present the perspectives and experiences of architects and engineers from across the globe Historically successful approaches are integrated with modern design concepts to create novel sustainable and resource conscious solutions The scope of topics covered include natural ventilation cooling and heating daylight and shading devices and green micro climate and functional facades making this a useful reference for a wide range of researchers and workers in the built environment Covers the most up to date research developments best practices and innovations from countries all over the globe Presents the latest research in vernacular architecture and sustainable building Contains case studies and examples to enhance practical application of the technologies presented Historic Indoor Microclimate of the Heritage Buildings Marco Pretelli, Kristian Fabbri, 2017-10-24 Offering readers essential insights into the relationship between ancient buildings their original and current indoor microclimates this book details how the generally virtuous relationship between buildings and their typical microclimate changed due to the introduction of new heating ventilation and air conditioning HVAC systems in historic buildings The new approach to the study of their Historic Indoor Microclimate HIM put forward in this book is an essential component to monitoring and evaluating building and artefact conservation Highlighting the advantages of adopting an indoor microclimatic approach to the preservation of existing historic materials by studying the original conditions of the buildings the book proposes a new methodology linking the preservation restoration of the historic indoor microclimate with diachronic analysis for the optimal preservation of historic buildings Further it discusses a number of frequently overlooked topics such as the simple and well coordinated opening and closing of windows an example extracted from a real case study In turn the authors elaborate the concept of an Historic Indoor Microclimate HIM based on Original Indoor Microclimate OIM which proves useful in identifying the optimal conditions for preserving the materials that make up historic buildings The book's main goal is to draw attention to the advantages of an indoor microclimatic approach to the preservation of existing historic materials manufacture by studying the original conditions of the buildings The introduction

of new systems in historic buildings not only has a direct traumatic effect on the actual building and its components but also radically changes one of its vital immaterial elements the Indoor Microclimate Architects restorers and engineers will find that the book addresses the monitoring of the indoor microclimate in selected historic buildings that have managed to retain their original state due to the absence of new HVAC systems and reflects on the advantages of a renewed attention to these aspects

Modern Architecture and Climate Daniel A. Barber, 2023-04-11 How climate influenced the design strategies of modernist architects Modern Architecture and Climate explores how leading architects of the twentieth century incorporated climate mediating strategies into their designs and shows how regional approaches to climate adaptability were essential to the development of modern architecture Focusing on the period surrounding World War II before fossil fuel powered air conditioning became widely available Daniel Barber brings to light a vibrant and dynamic architectural discussion involving design materials and shading systems as means of interior climate control He looks at projects by well known architects such as Richard Neutra Le Corbusier Lcio Costa Mies van der Rohe and Skidmore Owings and Merrill and the work of climate focused architects such as MMM Roberto Olgyay and Olgyay and Cliff May Drawing on the editorial projects of James Marston Fitch Elizabeth Gordon and others he demonstrates how images and diagrams produced by architects helped conceptualize climate knowledge alongside the work of meteorologists physicists engineers and social scientists Barber describes how this novel type of environmental media catalyzed new ways of thinking about climate and architectural design Extensively illustrated with archival material Modern Architecture and Climate provides global perspectives on modern architecture and its evolving relationship with a changing climate showcasing designs from Latin America Europe the United States the Middle East and Africa This timely and important book reconciles the cultural dynamism of architecture with the material realities of ever increasing carbon emissions from the mechanical cooling systems of buildings and offers a historical foundation for today s zero carbon design

Carbon-Neutral Architectural Design Pablo M. La Roche, 2024-05-31 The energy used to build and operate buildings is a significant source of greenhouse gas emissions While it is possible to reduce emissions through low carbon design many architects are not trained to do this Filling an urgent need for a design reference in this emerging field this book describes how to reduce building related greenhouse gas emissions through appropriate design techniques It presents strategies to achieve CO2 reductions with an emphasis on control of energy flows through the building envelope and passive cooling and heating strategies This new revised edition is updated throughout and includes a new section on embodied carbon and new chapters on daylighting and nature based cooling Features Adds new chapters on daylighting and nature based cooling with numerous updates throughout the rest of the chapters Presents strategies illustrated with examples for new construction and existing buildings to reduce energy consumption and reduce emissions Explains the origins of CO2 emissions associated with the operation and fabrication of buildings supplying water disposing of waste from the building and proposes strategies to reduce them Covers carbon calculations thermal comfort indigenous
