The Afterlife of Greek and Roman Sculpture Lea Stirling, Troels Myrup Kristensen, 2016-06-27 For centuries statuary and cor was a main characteristic of any city sanctuary or villa in the Roman world However from the third century CE onward the prevalence of statues across the Roman Empire declined dramatically By the end of the sixth century statues were no longer a defining characteristic of the imperial landscape Further changing religious practices cast pagan sculpture in a threatening light Statuary production ceased and extant statuary was either harvested for use in construction or abandoned in place The Afterlife of Greek and Roman Sculpture is the first volume to approach systematically the antique destruction and reuse of statuary investigating key responses to statuary across most regions of the Roman world The volume opens with a discussion of the complexity of the archaeological record and a preliminary chronology of the fate of statues across both the eastern and western imperial landscape Contributors to the volume address questions of definition identification and interpretation for particular treatments of statuary including metal statuary and the systematic reuse of villa materials They consider factors such as earthquake damage late antique views on civic versus private uses of art urban construction and deeper causes underlying the end of the statuary habit including a new explanation for the decline of imperial portraiture The themes explored resonate with contemporary concerns related to urban decline as evident in post industrial cities and the destruction of cultural heritage such as in the Middle East

Polychrome Sculpture Johannes Taubert, 2016-02-15 In the decades since its initial publication in German in 1978 Polychrome Sculpture has come to be widely regarded as a watershed text on the making and meaning of European medieval and Baroque painted wood sculpture An early proponent of interdisciplinary research Johannes Taubert played a pioneering role in combining the rigorous scientific analysis of materials with a fuller understanding of form and function an approach that has led to the development of technical art history as practiced today Many of the essays in this volume apply such scientific techniques as microscopic analysis to an art historical understanding of Romanesque and late Gothic wood sculpture revealing that far from serving a merely decorative function the painted surface of these works was intricately connected to their meaning The paint layers on the sculptures for example which the author spent years documenting through close examination and analysis were intended to impart a heightened sense of reality to the life sized sculptures thereby enhancing the viewer's experience of worship Taubert believed it was crucial for conservators to understand this context before undertaking any treatments No other book offers such a focused subtle and interdisciplinary examination of the subject as Polychrome Sculpture This influential work is now available in English for the first time in a meticulous translation enhanced and updated by new color illustrations annotations to the original text and a new introduction
