Double Paradox Andrew H. Wedeman, 2012-03-15 According to conventional wisdom rising corruption reduces economic growth And yet between 1978 and 2010 even as officials were looting state coffers extorting bribes raking in kickbacks and scraping off rents at unprecedented rates the Chinese economy grew at an average annual rate of 9 percent In Double Paradox Andrew Wedeman seeks to explain why the Chinese economy performed so well despite widespread corruption at almost kleptocratic levels Wedeman finds that the Chinese economy was able to survive predatory corruption because corruption did not explode until after economic reforms had unleashed dynamic growth To a considerable extent corruption was also a by product of the transfer of undervalued assets from the state to the emerging private and corporate sectors and a scramble to capture the windfall profits created by their transfer Perhaps most critically an anti corruption campaign however flawed has proved sufficient to prevent corruption from spiraling out of control Drawing on more than three decades of data from China as well as examples of the interplay between corruption and growth in South Korea Taiwan Equatorial Guinea and other nations in Africa and the Caribbean Wedeman cautions that rapid growth requires not only ongoing and improved anticorruption efforts but also consolidated and strengthened property rights
