

AIR POLLUTION HUMAN HEALTH IMPACTS

EYES

Because there is a high flow of blood in the eyes, they are especially sensitive to small pollution particles like those found in PM_{2.5}. Conditions such as dry eye syndrome, retinopathy, glaucoma, and cataracts have been connected to high air pollution exposure.

BRAIN

Air pollution exposure has been linked to a variety of neurological and cognitive impacts, including memory impairment, learning disabilities, anxiety, depression, schizophrenia, ADHD, and neurological conditions including dementia, Alzheimer's disease, Parkinson's disease, and stroke. Studies have even linked poorer air pollution decreases to lowered dementia risk.

LUNGS

A slew of respiratory impacts are attributed to dirty air, from respiratory inflammation to asthma development to chronic loss of pulmonary function. Because most air pollutants are breathed in, the respiratory system is often the place where air pollution-related disease is most readily observed.

HEART

Cardiovascular disease and death are closely linked to air pollution, with outcomes of heart disease, heart failure, cardiac arrest, and arrhythmias. Some studies have even shown a stronger correlation between cardiovascular damage and death after air pollution exposure than observed with respiratory diseases.

STOMACH

Studies have demonstrated a link between poor air quality and gastrointestinal diseases, including inflammatory bowel disease (IBD), irritable bowel syndrome (IBS), and appendicitis, as the inhalation of air pollution is associated with changes to the gut microbiota. Long-term exposure to high concentrations of NO₂ and PM has been linked to the early onset of Crohn's Disease.

LIVER

Animal studies find that long-term exposure to ambient air pollution is associated with metabolic-associated fatty liver disease, a disease that affects a quarter of the global population. The disease can progress to liver cancer and liver-related death.

BONES

A 2020 study found that ambient air pollution exposure is linked to lower bone mass. Other studies have found that air pollution may act as a risk factor for osteoporosis and be linked to higher rates of hospitalization for bone fractures, though research is limited.

REPRODUCTION

Though the mechanisms behind it are not yet understood, exposure to higher levels of air pollution has been associated with lower levels of fertility and more difficulty in conceiving, including in those undergoing in vitro fertilization, as well as in a variety of sperm quality parameters. Further research is needed to investigate how exactly air pollution acts on the reproductive system.

Climate Change and Air Pollution Rais Akhtar, Cosimo Palagiano, 2017-10-05 This book discusses regional and international climate change air pollution and human health scenarios The research from both industrialized and developing countries focuses on region specific perspectives of climate change impacts on air pollution After analyzing the variations of climate data over recent decades the authors consider the different effects of climate change on air pollution and health As stressed by the IPCC pollen smoke and ozone levels are likely to increase in a warming world affecting the health of residents of major cities Rising temperatures will worsen air quality through a combination of more ozone in cities bigger wild fires and worse pollen outbreaks according to a major UN climate report The report follows the World Health Organization in finding that air pollution is the world's greatest environmental health risk killing 7 million people in 2014 compared to 0.4 million deaths due to malaria Deteriorating air quality will most affect the elderly children people with chronic ill health and expectant mothers Another report suggests that more than 5.5 million people die prematurely each year due to air pollution with over half of those deaths occurring in China and India A study on the air pollution in the USA suggests that more than half of US population lives in areas with potentially dangerous air pollution and about six out of 10 of the top cities for air pollution in the USA are located in the state of California In the face of future climate change scientists have urged stronger emission controls to avoid worsening air pollution and the associated exacerbation of health problems especially in more populated regions of the world It is hoped that the implementation of the Paris Climate Agreement will help minimize air pollution Additionally the authors consider the various measures that different countries and groups of countries like the European Union have adopted to mitigate the problems arising from climate change and to safeguard the health of population The book examines the increasing incidence of diseases largely caused by climate change The countries regions covered in this study include the USA Northern Europe U.K. Southern Europe Italy Canada Australia East Asia Russia Hong Kong Taiwan Thailand Malaysia Indonesia India South Africa Mexico Brazil Caribbean countries and Argentina

The Top Books of the Year Pollution Human Health The year 2023 has witnessed a noteworthy surge in literary brilliance, with numerous compelling novels enthralling the hearts of readers worldwide. Lets delve into the realm of top-selling books, exploring the engaging narratives that have enthralled audiences this year. The Must-Read : Colleen Hoover's "It Ends with Us" This touching tale of love, loss, and resilience has captivated readers with its raw and emotional exploration of domestic abuse. Hoover masterfully weaves a story of hope and healing, reminding us that even in the darkest of times, the human spirit can prevail. Uncover the Best : Taylor Jenkins Reid's "The Seven Husbands of Evelyn Hugo" This spellbinding historical fiction novel unravels the life of Evelyn Hugo, a Hollywood icon who defies expectations and societal norms to pursue her dreams. Reid's absorbing storytelling and compelling characters transport readers to a bygone era, immersing them in a world of glamour, ambition, and self-discovery. Discover the Magic : Delia Owens' "Where the Crawdads Sing" This captivating coming-of-age story follows Kya Clark, a young woman who grows up alone in the marshes of North Carolina. Owens weaves a tale of resilience, survival, and the transformative power of nature, entrancing readers with its evocative prose and mesmerizing setting. These popular novels represent just a fraction of the literary treasures that have emerged in 2023. Whether you seek tales of romance, adventure, or personal growth, the world of literature offers an abundance of compelling stories waiting to be discovered. The novel begins with Richard Papen, a bright but troubled young man, arriving at Hampden College. Richard is immediately drawn to the group of students who call themselves the Classics Club. The club is led by Henry Winter, a brilliant and charismatic young man. Henry is obsessed with Greek mythology and philosophy, and he quickly draws Richard into his world. The other members of the Classics Club are equally as fascinating. Bunny Corcoran is a wealthy and spoiled young man who is always looking for a good time. Charles Tavis is a quiet and reserved young man who is deeply in love with Henry. Camilla Macaulay is a beautiful and intelligent young woman who is drawn to the power and danger of the Classics Club. The students are all deeply in love with Morrow, and they are willing to do anything to please him. Morrow is a complex and mysterious figure, and he seems to be manipulating the students for his own purposes. As the students become more involved with Morrow, they begin to commit increasingly dangerous acts. The Secret History is a masterful and gripping novel that will keep you speculating until the very end. The novel is a warning tale about the dangers of obsession and the power of evil.
