Polycyclic Hydrocarbons and Cancer Volume 1 Environment Chemistry and Metabolism brings together information from many diverse disciplines in the environmental chemical biological and medical sciences to provide a comprehensive account of the link between polycyclic aromatic hydrocarbons PAHs and cancer This volume consists of 19 chapters divided into seven sections based on the following themes Energy Sources Environmental Occurrence and Monitoring Tobacco Carcinogenesis Chemistry Carcinogenicity and Theory Metabolism and Activation Enzymology and Pharmacokinetics The first three chapters focus on the energy sources occurrence and surveillance and environmental monitoring of PAHs The discussion then turns to the link between smoking and cancer the carcinogenicity of 5 methylchrysene synthesis and reactions of diol epoxides and related metabolites of carcinogenic hydrocarbons and enzymes of oxygenation The final chapter is devoted to the pharmacokinetics of chemically reactive metabolites This book will be of interest to investigators and educators concerned with scientific aspects of PAH research government officials and elected representatives as well as industry leaders who must confront and solve the problems related to PAHs and others in various fields such as chemistry environmental science biochemistry and enzymology pharmacology molecular and cell biology and genetics

Handbook of Chemical Risk Assessment Ronald Eisler, 2000-04-12 Written over a period of 17 years the Handbook of Chemical Risk Assessment exhaustively examines and

analyzes the world literature on chemicals entering the environment from human activities The three volumes cover chemicals recommended by environmental specialists of the U S Fish and Wildlife Service and other resource managers The choices were based on the real or potential impact of each contaminant and on the knowledge available about their mitigation The information for each chemical includes source and use physical chemical and metabolic properties concentrations in field collections of abiotic materials and living organisms deficiency effects lethal and sublethal effects and proposed regulatory criteria for the protection of human health and sensitive natural resources Each chapter selectively reviews and synthesizes the technical literature on a specific priority contaminant and its effects on the environment Successful risk assessment relies heavily on extensive and well documented databases They often include too much or too little information about too many chemicals Of the hundreds of thousands of chemicals discharged into the environment only a small number have sufficient information to attempt preliminary risk assessment Sold only as a three volume set the Handbook of Chemical Risk Assessment provides you with the exact amount of information you need in a single resource
