J. Federico, 2012-12-06 The present essay stems from a history of polyhedra from 1750 to 1866 written several years ago as part of a more general work not published So many contradictory statements regarding a Descartes manuscript and Euler by various mathematicians and historians of mathematics were encountered that it was decided to write a separate study of the relevant part of the Descartes manuscript on polyhedra The contemplated short paper grew in size as only a detailed treatment could be of any value After it was completed it became evident that the entire manuscript should be treated and the work grew some more The result presented here is I hope a complete accurate and fair treatment of the entire manuscript While some views and conclusions are expressed this is only done with the facts before the reader who may draw his or her own conclusions I would like to express my appreciation to Professors H S M Coxeter Branko Grünbaum Morris Kline and Dr Heinz Jirgen Hess for reading the manuscript and for their encouragement and suggestions I am especially indebted to Dr Hess of the Leibniz Archiv for his assistance in connection with the manuscript I have been greatly helped in preparing the translation of the manuscript by the

Fischer,R. J. Wieser,2012-12-06 Until some years ago serum or crude tissue extracts were used predominantly or exclusively as media supplements for the cultivation of cells However during this time evidence accumulated that these supplements could not provide in an optimal way most of the cultivated cells with all factors necessary for their survival their proliferation and or differentiation Moreover a variety of cells could not be cultivated at all under these conditions and often the composition of the cultures changed within rather short periods of time

by overgrowth of initially present subpopulations of those cells which grow well in these supplements as for example fibroblasts Nevertheless using these supplements or fractions thereof insight could be gained into some of the influences of serum or tissue extract constituents with regard to survival proliferation and differentiation of cells in culture It became obvious from these experiments that serum or tissue extracts did not only supply cells with nutrients or vitamins which are now constituents of all basic media but also with hormones as well as growth differentiation and attachment factors In course of time experiments were performed in which serum enriched with hormones and other growth factors was used to successfully cultivate those cells which could not survive in serum supplemented media alone Under normal conditions in an organism however only a small population of cells has direct contact with serum

King of Infinite Space Siobhan Roberts, 2009-05-26 There is perhaps no better way to prepare for the scientific breakthroughs of tomorrow than to learn the language of geometry Brian Greene author of The Elegant Universe The word geometry brings to mind an array of mathematical images circles triangles the Pythagorean Theorem Yet geometry is so much more than shapes and numbers indeed it governs much of our lives from architecture and microchips to car design animated movies the molecules of food even our own body chemistry And as Siobhan Roberts elegantly conveys in The King of Infinite Space there can be no better guide to the majesty of geometry than Donald Coxeter perhaps the greatest geometer of the twentieth century Many of the greatest names in intellectual history Pythagoras Plato Archimedes Euclid were geometers and their creativity and achievements illuminate those of Coxeter revealing geometry to be a living ever evolving endeavor an intellectual adventure that has always been a building block of civilization Coxeter's special contributions his famed Coxeter groups and Coxeter diagrams have been called by other mathematicians tools as essential as

numbers themselves but his greatest achievement was to almost single handedly preserve the tradition of classical geometry when it was under attack in a mathematical era that valued all things austere and rational Coxeter also inspired many outside the field of mathematics Artist M C Escher credited Coxeter with triggering his legendary Circle Limit patterns while futurist inventor Buckminster Fuller acknowledged that his famed geodesic dome owed much to Coxeter s vision The King of Infinite Space is an elegant portal into the fascinating arcane world of geometry
