Polymers in Conservation ,1991 Handbook of Polymers in Paper Conservation Elisabetta Princi, 2011-10-31 This book describes the latest developments in paper conservation by using polymeric materials A short introduction on polymer chemistry is given to highlight the polymer characteristics and properties. The book is then dedicated to the conservative problems and issues in the field of paper artworks This practical book identifies the importance of each type of polymer related to its nature and properties from the point of view of paper conservation With the help of schemes and tables the polymers are classified in terms of characteristics and final uses in respect to this very complex material Conservation C V Horie, 2013-05-13 Materials in Conservation is the definitive introduction to the properties of materials used in conservation The continual struggle of conservators to ameliorate the deterioration of objects has led to increasing use of synthetic polymers. These materials are part of the sophisticated technology that has been developed to augment and often replace traditional materials and methods Conservators therefore have a wider range of techniques available However they must be able to appreciate the potentials and pitfalls of any proposed technique The first section explains physical and chemical properties which are important in the conservation process i e application ageing reversal The topics covered include molecular weight glass transition temperature solubility and solvents polymerisation and degradation reactions The second section provides a detailed consideration of the individual materials current and obsolete used in conservation drawing out the factors relevant to their effects on objects The conservation uses of each material are summarised and referenced to allow further study In five appendices the properties of the polymers solvents and their interactions are tabulated with a list of suppliers and conversion table of physical units IUPAC and SI nomenclature is used throughout the book In this second edition this classic text is revised and updated to include modern materials such as cyclododecane and current ideas on adhesion consolidation and reversibility making Materials in Conservation the definitive source of vital information in the field This handy reference book should be on the bench of every conservator and available wherever objects from steam engines to dried plants are preserved Long-chain Polymers in Conservation Grace Wever, 1966

Handbook of Polymers in Stone Conservation Elisabetta Princi,2014-11-01 Dr Elisabetta Princi has wide experience regarding the use of polymers in the field of cultural heritage She has led a research team at the University of Genoa Genoa Italy for several years and has published widely on the scientific background to the conservation preservation and restoration of stone and stone based works of art This handbook is dedicated to the conservation of stone materials by the application of polymers A short introduction on polymer chemistry is given to highlight their characteristics and properties After the physical and chemical attributes of stone are summarised the problems related to its degradation are discussed Finally the

properties of the various polymers of potential value for stone restoration are reviewed and classified by schemes and tables and pointers for the future are suggested This handbook will be of great interest to those who share the author's enthusiasm for stone artworks and her dedication to their restoration and conservation The Use of Synthetic Polymers in Conservation: an Annotated Bibliography ,1976 **Key Elements in Polymers for Engineers and Chemists** Alexandr A. Berlin, Viktor F. Kablov, Andrey A. Pimerzin, Simon S. Zlotsky, 2014-05-13 This book provides comprehensive coverage on the latest developments of research in the ever expanding area of polymers and advanced materials and their applications to broad scientific fields including physics chemistry biology and materials It presents physical principles in explaining and rationalizing polymeric phenomena Featuring classica PROCEEDINGS 4th International Congress on "Science and Technology for the Safeguard of Cultural Heritage in the Mediterranean Basin" VOL. II, The Use of Synthetic Polymers in Conservation E. Witte (de), M. Goessens-Landrie, IIC., 1976 Archaeological Conservation Using Polymers Chris Wayne Smith, 2003-01-08 Over the years archaeologists have developed a number of techniques for conserving historical artifacts for future generations Along with these techniques researchers have developed a series of ethical principles for treating materials in a way that allows them to be not only observed and analyzed for the present but also in re studied in the future Conservation techniques used up to now however have provided artifacts only a limited lifespan and in some cases they do not work well with water logged materials Within the past few years archaeological chemistry and concerns of longevity testing have become central issues in the development of conservation treatment strategies This problem became particularly acute when members of the Texas A M Nautical Archaeology Program were called on to conserve artifacts from La Belle the sunken ship of La Salle excavated in the 1990s off the coast of Texas by the Texas Historical Commission Entombed in the mud that sealed it from decay for over three centuries C Wayne Smith writes in his introduction the waterlogged hull and hundreds of thousands of fragile artifacts including brain matter in the skull of one unfortunate sailor would have been a futile conservation effort without new preservation technologies Working with Dow Corning Corporation Texas A M s Archaeological Preservation Research Lab APRL and the Conservation Research Lab CRL Smith and his colleagues in A M s Nautical Archaeology Program set out to develop a series of chemistries and techniques that would provide successful and affordable treatment strategies for organic materials In this ground breaking description of the processes and materials that were developed Smith explains these techniques in ways that will allow museums and historical societies to conserve more stable artifacts for traveling exhibits and interactive displays and will allow researchers to conserve new discoveries without sacrificing important information Beyond the advantages offered by polymer replacement Passivation Polymer technologies Smith considers a concept seldom addressed in conservation artistry Variance in equipment relative humidity laboratory layout intended results and level of expertise all affect researchers ability to obtain consistent and aesthetically correct samples and require a willingness to explore treatment parameters and combinations of

polymers Smith prescribes an effective layout for day to day conservation of small organic artifacts and then examines some of the mechanical techniques used to process various organic materials from marine and land sites He concludes with an exploration of new tools and technologies that can help conservators devise more effective conservation strategies including CT scans and Computer Aided Design images and stereolithography All archaeologists conservators and museologists working with perishable artifacts will benefit from the careful explication of these new processes and those wishing to incorporate some or all of them will find the step by step instructions for doing so **Biodegradable Matrices and** Composites Alessandro Pegoretti, Yu Dong, Miroslav Slouf, 2020-09-23 This eBook is a collection of articles from a Frontiers Research Topic Frontiers Research Topics are very popular trademarks of the Frontiers Journals Series they are collections of at least ten articles all centered on a particular subject With their unique mix of varied contributions from Original Research to Review Articles Frontiers Research Topics unify the most influential researchers the latest key findings and historical advances in a hot research area Find out more on how to host your own Frontiers Research Topic or contribute to one as an author by contacting the Frontiers Editorial Office frontiers in org about contact *Organic Chemistry of Museum* Objects John Mills, Raymond White, 2012-09-10 The Organic Chemistry of Museum Objects makes available in a single volume a survey of the chemical composition properties and analysis of the whole range of organic materials incorporated into objects and artworks found in museum collections The authors cover the fundamental chemistry of the bulk materials such as wood paper natural fibres and skin products as well as that of the relatively minor components incorporated as paint media varnishes adhesives and dyes This expanded second edition now in paperback follows the structure of the first though it has been extensively updated In addition to chapters on basic organic chemistry analytical methods analytical findings and fundamental aspects of deterioration the subject matter is grouped as far as possible by broad chemical class oils and fats waxes bitumens carbohydrates proteins natural resins dyestuffs and synthetic polymers This is an essential purchase for all practising and student conservators restorers museum scientists curators and organic chemists Modern Paints Uncovered ,2007 Paint formulations and historyAnalysis and characterizationTreatmentsCleaning issuesBehavior and propertiesPosters Recent Advances in Smart Materials for the Built Environment Cesare Sangiorgi, Filippo Ubertini, Anna Laura Pisello, 2018-12-10 This book is a printed edition of the Special Issue Recent Advances in Smart Materials for the Built Environment that was published in Materials The Grove Encyclopedia of Materials and Techniques in Art Gerald W.
