

## CONVERGENCE OF A SECOND-ORDER SCHEME FOR NON-LOCAL CONSERVATION LAWS

**Abstract.** In this article, we present the convergence analysis of a second-order numerical scheme for traffic flow models that incorporate non-local conservation laws. We combine a MUSCL-type spatial reconstruction with strong stability preserving Runge-Kutta time-stepping to devise a fully discrete second-order scheme. The resulting scheme is shown to converge to a weak solution by establishing the maximum principle, bounded variation estimates and  $L^1$  Lipschitz continuity in time. Further, using a space-step dependent slope limiter, we prove its convergence to the entropy solution. We also propose a MUSCL-Hancock type second-order scheme which requires only one intermediate stage unlike the Runge-Kutta schemes and is easier to implement. The performance of the proposed second-order schemes in comparison to a first-order scheme is demonstrated through several numerical experiments.

### 1. INTRODUCTION

In recent years, conservation laws with non-local flux have emerged as a vital area of research due to its wide-ranging applications in various physical models. These models include sedimentation [13], crowd dynamics [17, 31–33], supply chains [8], conveyor belts [49, 64], weakly coupled oscillators [5], gradient constrained equations [6], traffic flow [9, 14, 20, 23, 28, 67], structured population dynamics in biology [62], etc. Various aspects of these non-local conservation laws are extensively studied in the literature, such as their well-posedness addressed in [3, 7, 14, 18, 20, 30, 38, 47, 64] and non-local to local limits studied in [15, 16, 29, 34–37, 58]. Extended studies include non-local balance laws in [1, 57, 59] and the non-local pair interaction model in [39, 40], and references therein. In this article, we specifically focus on the traffic flow models governed by non-local conservation laws, originally proposed in [14] and further studied in [21, 24, 26, 42, 46]. These models account for the interaction between drivers and the surrounding density of vehicles and have been widely studied in the literature. In particular, stability estimates for non-local traffic flow equations have been derived in [24, 54] and regularity results for solutions of these equations have been investigated in [10]. Also, there is a recent trend to derive general numerical schemes for non-local conservation laws, see [4, 45, 55]. Furthermore, the traveling wave solutions for

While challenges to authority are generally perceived as destructive to legal order, this original collection of essays with Magna Carta at its heart questions this assumption. In a series of chapters concerned with different forms of challenges to legal authority over time, geographical place, and subject matters both public and private, this volume demonstrates that challenges to authority which seek the recognition of rights actually change the existing legal order rather than destroying it. The chapters further explore how the myth of Magna Carta emerged and its role in the pre-modern world, how challenges to authority formed the basis of the recognition of rights in particular areas within England, and how challenges to authority resulted in the recognition of particular rights in the United States, Canada, Australia, and Germany. This is a uniquely insightful thematic collection which proposes a new view into the processes of legal change.
