perseverance to transform the world's factual darkness into precarious splendor. Each hour seems Sze writes as he ingeniously integrates the world's miraculous and mundane: a woodpecker drilling a utility pole or a 1300-year-old lotus seed into a moving visionary journey. Mayans charted Venus's motion across the sky, poured chocolate into jars and interred them with the dead. A woman dips three bowls into hair's fur glaze, places them in a kiln, anticipates removing them red-hot to a shelf to cool. When samba melodies have dissipated into air when lights wrapped around a willow have vanished, what pattern of shifting lines leads to Duration. Arthur Sze, one of America's leading poets, is the author of nine books of poetry and translation. He is professor emeritus of creative writing at the Institute of American Indian Arts and just completed a term as Poet Laureate of Santa Fe, New Mexico.

The Glass Constellation Arthur Sze, 2021-04-13 This book is an overwhelming feast, a treasure and more than enough proof that Sze is a major poet. NPR National Book Award winner Arthur Sze is a master poet and *The Glass Constellation* is a triumph spanning five decades, including ten poetry collections and twenty-six new poems. Sze began his career writing compressed lyrical poems influenced by classical Chinese poetry; he later made a leap into powerful polysemous sequences, honing a distinct stylistic signature that harnesses luminous particulars and is sharply focused, emotionally resonant, and structurally complex. Fusing elements of Chinese, Japanese, Native American, and various Western experimental traditions, employing startling juxtapositions that are always on target, deeply informed by concern for our endangered planet and troubled species, Arthur Sze presents experience in all its multiplicities in singular book after book. This collection is an invitation to immerse in a visionary body of work mapping the evolution of one of our finest American poets.

In Company Lee Bartlett, Vincent Barrett Price, Dianne Edenfield Edwards, 2004 This collection brings together for the first time three generations of poets associated with New Mexico, representing a variety of styles and personalities. The first group, beginning with the distinguished East Coast emigre to Santa Fe, Witter Bynner and ending with the New Mexico-born MacArthur fellow Jay Wright, came into their maturities by the 1960s. This era's distinguished roster includes such figures as Charles Tomlinson, Robert Creeley, Nathaniel Tarn, and Simon Ortiz. The second group, including nationally known figures like Joy Harjo, Jimmy Santiago Baca, N. Scott Momaday, and Arthur Sze, became famous in the 1970s and 1980s. The third group, dating mostly to the 1990s, includes some writers familiar only to audiences who frequent coffee houses and poetry slams, as well as authors whose names are familiar both nationally and regionally, among them Demetria Martinez and Kate Horsley. V. B. Price is general editor of the Mary Burritt Christiansen Poetry series. All three editors of *In Company* are poets.

High-Redshift Galaxies Immo Appenzeller, 2009-06-17 The high redshift galaxies became a distinct research field during the final decade of the 20th century. At that time the Lyman break technique made it possible to identify significant samples of such objects and the new generation of 8 to 10 m telescopes resulted in the first good spectroscopic data. Today the high redshift galaxies have developed into one of the important topics of astrophysics accounting for about 5-10% of the publications in the major scientific journals devoted to astronomy. Because high redshift galaxies is a rapidly developing field and since new results are published constantly writing a book on this topic is challenging. On the other hand in view of the large amount of individual results now in the literature and in view of the still growing interest in this topic it appears worthwhile to summarize and evaluate the available data and to provide an introduction for those who wish to enter this field or who for various reasons might be interested in its results. The end of the first decade of the 21st century appears to be a good point in time to attempt such a summary. The current generation of ground based 8 to 10 m optical telescopes the Hubble Space Telescope and the most important large radio telescopes have by now been in operation since about one or two decades. Although these instruments will continue to produce important scientific results for some time to come many of the initial programs exploiting their unique new possibilities have been completed.

Shapeshift Sherwin Bitsui, 2003-09 In words drawn from urban and Navajo perspectives the poet articulates the challenge a Native American person faces in reconciling his or her inherited history of lore and spirit with the coldness of modern civilization.
