

General Education Electives Reflection

As I go back down memory lane here at Iowa State, I can't help but remember some of the random courses I took outside the engineering curriculum. You know, the classes they call general education. Honestly, at first I dreaded taking these classes because I felt as if they were just busy work. But, once I started actually taking it, I sort of understood why Iowa State University would require us to take these general education classes. Aside from some of them being fun and cool to be in, they were there to showcase to us that not everything has to be related to engineering.

Take ARABC 371X, for example. Right away, I remember we were assigned readings in a book called "1001 Arabian Nights". It definitely had nothing to do with engineering, but man did I enjoy reading those tales. My brain wasn't consistently fixated on solving something or having to really understand a concept, it was just able to enjoy fun yet adventurous reading. In this class we talked about several things, narrative tools, supernatural elements, and this whole new realm in the Medieval Middle East. That being said, I had to write a few papers to showcase my understanding of the readings, and talk about the meanings or messages behind each tale. At first this would be difficult, not because I was writing a paper but because I was writing a paper on something that didn't require a lot of problem solving, or critical thinking. But the use of my imagination and curiosity. All in all I stepped out of my comfort zone and had fun taking this class.

Then there was HIST 222, which was a class that went over U.S. history. I am not a big fan of social studies, or history to begin with. So, when I initially started this class I was dreading it and just wanted it to be over. But, as the semester started and continued, my opinion on this class changed. It gave me a bigger picture on how modern industrial society formed in the US. Ironically enough, as an engineer the history or backstory is pretty useful for an engineer. What I mean by that is engineers learn from others' reasoning, mistakes or experiences. Without history being documented we would never know where to start on certain things, or how to go about doing something from an engineering perspective.

SOC 134 was another surprise to me. I took this class because I was always interested in why all this crazy stuff is happening in the US and in the world. This class helped me understand all that on a broader level. It guided me in a direction and equipped me with the understanding of these different social dynamics, which as an engineer is very useful since you work with people from all over the world. You get a brief understanding of why people are the way they are in certain environments or societies.

These courses were essentially an escape from all the rigorous math and technical classes. They added some color to my college life. ARABC 371X made me appreciate my culture more as a Palestinian. While HIST 22 gave me an insight in why things are the way they are in the US. SOC 134 showed me that being an engineer isn't just about understanding technology or machines or systems, it's about understanding people as well.
