**Reflections on Experimental Science** Martin L. Perl, 1996 This is a collection of important lecture and original articles and commentaries by Martin Perl discoverer of the tau lepton and the third generation of elementary particles and this year's Nobel Prize winner This book contains a fascinating and realistic picture of experimental science based on the high energy physics research work carried out by him Using reprints of his articles with his commentaries the author presents the various aspects of experimental research in science the pleasures and risks of experimental work the pain and frustration with experiments that are useless or fail the dreaming about experiments that were not carried out the constant search for innovation and creativity in the work and the special joy of discovery The articles and commentaries range from the early days of bubble chambers and spark chambers in the 1950's to the author's present research experiments at an electron positron collider and a search for free quarks The book is for the general reader as well as the scientist

**Subnuclear Physics, the First 50 Years: Highlights From Erice To Eln** O Barnabei, P Pupillo, Fabio Roversi Monaco, Antonino Zichichi, 2000-08-04 For the Galvani Bicentenary Celebrations the University of Bologna and its Academy of Sciences singled out subnuclear physics as the field of scientific research to be associated with this important event as it would best illustrate for the new generation of students the challenge inherent in fundamental sciences Subnuclear physics was born 50 years ago and has represented ever since the new frontiers of Galilean science In his opening lecture delivered on the first day of the new academic year Professor Antonino Zichichi analytically reviewed the basic conceptual developments and main discoveries achieved in subnuclear physics during the last 50 years Given the

importance of this field of fundamental research Professor Zichichi was invited to expand the contents of his lecture into a book and the outcome is this invaluable volume **Sammlung** Alberto Giovannini, 2000 This important volume describes the wide ranging scientific activities of L on Van Hove through commentaries by his colleagues and a selection of his most influential papers and documents The reprinted papers are grouped by topic starting from his early work in mathematics and theoretical and statistical physics up to his very last contributions in elementary particle physics and multiparticle dynamics Van Hove's career as teacher director and science advisor in many European institutions is presented in sketches by friends and coworkers A selection of his speeches and documented thoughts on science completes the volume *Quantum Legacy, A: Seminal Papers Of Julian Schwinger* Kimball A Milton, 2000-05-25 Julian Schwinger 1918 1994 was one of the giants of 20th Century science He contributed to a broad range of topics in theoretical physics ranging from classical electrodynamics to quantum mechanics from nuclear physics through quantum electrodynamics to the general theory of quantum fields Although his mathematical prowess was legendary he was fundamentally a phenomenologist He received many awards including the first Einstein Prize in 1951 and the Nobel Prize in 1965 which he shared with Richard Feynman and Sin itiro Tomonaga for the self consistent formulation of quantum electrodynamics into a practical theory His more than 70 doctoral students have played a decisive role in the development of science in the second half of this century This important volume includes many of Schwinger's most important papers on the above and other topics such as the theory of angular momentum and the theory of many body systems The papers collected here continue to underlie much of the work done by theoretical physicists today *In Conclusion: A Collection Of Summary Talks In High Energy Physics* James D Bjorken, 2003-10-21 This invaluable volume is a collection of conference talks by James D Bjorken who has made a huge impact on particle physics and the development of the Standard Model The earliest of these talks was given in 1965 and the latest in 1990 The book provides from a personal perspective a glimpse of the complex evolution of the field over those highly productive decades In Conclusion A Collection of Summary Talks in High Energy Physics is aimed at a broad spectrum of particle physicists and students both experimental and theoretical **Creation Of Quantum Chromodynamics And The Effective Energy, The: In Honour Of A Zichichi On The Occasion Of The Galvani Bicentenary Celebrations** L N Lipatov, Gabriele Veneziano, Gerard 't Hooft, Vladimir N Gribov, Victor F Weisskopf, 2001-01-03 UNDER THE SPELL OF THE GAUGE PRINCIPLE by G 't Hooft The University of Bologna and its Academy of Sciences in collaboration with the Italian National Institute for Nuclear Physics and the Italian Physical Society celebrated in 1998 the bicentenary of a great pioneer in the field of electric phenomena Luigi Galvani the father of macroelectricity During these two centuries the physics of electric phenomena has given rise first to the Maxwell equations then to quantum electrodynamics and finally to the synthesis of all reproducible phenomena the Standard Model A cornerstone of the Standard Model is quantum chromodynamics QCD which describes the interaction between quarks and gluons in the innermost part of the structure of matter The discovery of QCD

will be recalled in the future as one of the greatest achievements of mankind Many physicists the world over have contributed to its creation on both the experimental and the theoretical front Professor Antonino Zichichi has played an important role in this scientific venture as documented by his works which are reproduced in this invaluable volume One of the founders of European physics Professor Victor F Weisskopf contributes with his memories of the time when QCD had many problems This volume owes its existence to a founding father of QCD Professor Vladimir N Gribov whose sudden demise prevented him from directly contributing to its final edition Two world leaders in subnuclear theoretical physics Professors Gerardus t Hooft and Gabriele Veneziano illustrate the significance of the contributions of Antonino Zichichi in QCD

**The Origin of the Third Family** O. Barnabei,1998 This volume has two main components reports and testimonies Both will allow the reader to know how this new field of physics was opened how it gave rise to new technological developments now still of great value for electron and muon detection and how much work was needed for the peculiar symmetry to be so short lived

**From the Preshower to the New Technologies for Supercolliders** Antonino Zichichi,Björn H. Wiik,Albrecht Wagner,Horst Wenninger,2002 Presents a series of inventions and technological developments having contributed to the discovery of new particles and new phenomena in the field of subnuclear physics

**Linus Pauling - Selected Scientific Papers (In 2 Volumes) - Volume 1** Barclay Kamb,Linda Pauling Kamb,Carl Alexander Kamb,Peter Jeffress Pauling,Linus Pauling Jr,2001-11-02 Linus Pauling wrote a stellar series of over 800 scientific papers spanning an amazing range of fields some of which he himself initiated This book is a selection of the most important of his writings in the fields of quantum mechanics chemical bonding covalent ionic metallic and hydrogen bonding molecular rotation and entropy protein structure hemoglobin molecular disease molecular evolution the antibody mechanism the molecular basis of anesthesia orthomolecular medicine radiation chemistry biology and nuclear structure Through these papers the reader gets a fresh unfiltered view of the genius of Pauling s many contributions to chemistry chemical physics molecular biology and molecular medicine

Scientific Papers of Arthur Holly Compton Arthur Holly Compton,1973-12 Arthur Holly Compton was one of the great leaders in physics of the twentieth century In this volume Robert S Shankland who was once a student of Compton s has collected and edited the most important of Professor Compton s papers on X rays the field of his greatest achievement and on other related topics Compton entered the field of X ray research in 1913 and carried on active work until the 1930s when he began to specialize in cosmic rays During the years when Compton was an active leader in X ray research he made many notable contributions which are reflected in the papers presented here He was the first to prove several important optical properties of X rays including scattering complete polarization and total reflection He was also the first with his student R L Doan to use ruled gratings for the production of X ray spectra Professor Compton s greatest discovery for which he was awarded a Nobel Prize in 1927 was the Compton Effect This was the outgrowth of experiments he had

initiated during a year at Cambridge in 1919 20 He did the major portion of these experiments at Washington University in St Louis during the period 1920 24 His work demonstrated that in the scattering of X rays by electrons the radiation behaves like corpuscles and that the interaction between the X ray corpuscles and the electrons in the scatter is completely described by the principles of the conservation of energy and momentum for the collisions of particles In his introduction Professor Shankland gives a historical account of the papers narrates Professor Compton s early scientific career and shows how he arrived at a quantum explanation of the Compton scattering after eliminating all classical explanations **CERN Courier**
