Regeneration And Plasticity In The Mammalian Visual System:

Regeneration and Plasticity in the Mammalian Visual System Dominic Man-Kit Lam, Garth M. Bray, 1992 This fourth volume in the Retina Research Foundation Symposia Proceedings highlights several of the strategies and experimental paradigms that are currently used to exploit and amplify the regenerative capacity of the adult mammalian visual system and reviews the exciting advances being made in understanding the molecular basis of central nervous system regeneration. Because loss of neurons or interruptions of their connective pathways in the mammalian visual system can in contrast to certain amphibians and fish lead to permanent loss of vision, studies of regeneration and plasticity in this system serve as valuable models for the reconstitution of other parts of the nervous system and as potential approaches to the diverse disorders that lead to visual loss. Dominic Man Kit Lam is Director of the Center for Biotechnology and Professor of Biotechnology, Cell Biology and Ophthalmology at Baylor College of Medicine. Garth M Bray is Professor in the Centre for Research in Neuroscience at McGill University. Partial Contents and Contributors: I Introduction Harold J Sheedo, James E Turner II Cells and Molecules that Influence Neuronal Survival Susan O Meakin, Eric M Shooter, Garth M Bray, Lamberto Maffei et al III Molecular Mechanisms of Axonal Regeneration Louis F Reichardt, Greg E Lemke, Randall N Pittman, Susan Spencer, Mark B Willard et al IV Retinal Responses to Injury and Transplantation Kwok Fai So, Raymond D Lund, Harold J Sheedlo, Manuel P delCerro et al V Plasticity of Connectivity in the Visual System Edward G Jones, Douglas O Frost, Torsten N Wiesel, Albert J Aquayo et al **Contrast Sensitivity** Robert Shapley, R. Howard, 2012-01-27 The three volume work *Perceiving in Depth* is a sequel to *Binocular Vision and Stereopsis* and to *Seeing in Depth* both by Ian P Howard and Brian J Rogers. This work is much broader in scope than the previous books and includes mechanisms of depth perception by all senses including aural electrosensory organs and the somatosensory system. Volume 1 reviews sensory coding, psychophysical and analytic procedures and basic visual mechanisms. Volume 2 reviews stereoscopic vision. Volume 3 reviews all mechanisms of depth perception other than stereoscopic vision. The three volumes are extensively illustrated and referenced and provide the most detailed review of all aspects of perceiving the three dimensional world. Volume 1 starts with a review of the history of visual science from the ancient Greeks to the early 20th century with special attention devoted to the discovery of the principles of perspective and stereoscopic vision. The first chapter also contains an account of early visual display systems such as panoramas and peepshows and the development of stereoscopes and stereophotography. A chapter on the psychophysical and analytic procedures used in investigations of depth perception is

followed by a chapter on sensory coding and the geometry of visual space An account of the structure and physiology of the primate visual system proceeds from the eye through the LGN to the visual cortex and higher visual centers This is followed by a review of the evolution of visual systems and of the development of the mammalian visual system in the embryonic and post natal periods with an emphasis on experience dependent neural plasticity An account of the development of perceptual functions especially depth perception is followed by a review of the effects of early visual deprivation during the critical period of neural plasticity on amblyopia and other defects in depth perception Volume 1 ends with accounts of the accommodation mechanism of the human eye and vergence eye movements Research Awards Index ,1989 *Biomedical*

students to grasp the fundamental knowledge and understanding of the structures and functions of the human nervous system that are relevant to the study of psychology the snapshot of key studies detailed in the textboxes allow critical evaluation of the role of physiology in human behaviour against a backdrop of up to date research clear explanations of the key methods in the text give students an appreciation of the contributions made by the different approaches and research methods that are used in biological psychology memory maps and diagrams within the text encourage learning and allow students to formulate memory aids to assist recall in exam conditions a companion website consists of PowerPoint lecture slides and a testbank for teachers 50 questions per chapter as well as interactive self assessment testbank for students 10 questions per chapter

The Handbook of Multisensory Processes Gemma Calvert, Charles Spence, Barry E. Ig Superfamily Molecules in the Nervous System Peter Sonderegger, 2003-09-02 A vast number of neural cell surface glycoproteins belonging to the immunoglobulin superfamily have been isolated over the past two decades In functional studies many of them have been shown to confer adhesive properties to cells and to play an important role in developmental processes such as cell migration and axon outgrowth Recent observations implicate Ig superfamily adhesion molecules in the regulation of activity dependent synaptic plasticity in regeneration after neural trauma as well as in the pathogenesis of malformations in the developing nervous systems This book summarizes the molecular features and some of the cellular functions of this important class of cell surface molecules It includes detailed information on the molecular structure of the immunoglobulin fold the common domain of these proteins the molecular interactions between various neural Ig superfamily members and their role in signal transduction as well as the role of Ig superfamily adhesion molecules in axon guidance during both vertebrate and invertebrate neurogenesis Recent observations on a role for these molecules in activity dependent synaptic plasticity and in the regeneration of injured axons in the peripheral and central nervous system are described A discussion on the connection between Ig superfamily adhesion molecules and medical genetics is also provided
