Persoon, Colin Janssen, Wim De Coen, 2012-12-06 The determination of the hazards resulting from the accidental or deliberate contamination of terrestrial and aquatic environments is in most countries still limited to the detection and quantification of the suspected pollutants by chemical analyses. Such an approach is unfortunately hampered by the following constraints: the costs as well as the technical difficulties of analyzing every individual chemical which may be present in the samples and the difficulty of assessing the hazards and risks of environmental contaminations from a set of chemical data. During the last decades the scientific and regulatory community has gradually realized that biological methodologies have to be taken into consideration for an ecologically meaningful assessment of the toxicological hazards of contaminants. Effect evaluations obtained with biological techniques indeed integrate the impact of all the contaminants to which living biota are exposed. Bioassays with selected test species representative for the biological communities of the environments under consideration are now applied more or less regularly to determine toxic and genotoxic effects. Taking into account the species specific and chemical specific character of toxicity to biota, the necessity of a battery of tests, approach with species of different trophic levels is currently also generally accepted and implemented. It is clear that a balanced partnership between chemical, biological, toxicological and microbiological analyses is always the best strategy for generating the broadest information base on environmental hazards.

Life in the Open Ocean Joseph J. Torres, Thomas G. Bailey, 2022-01-31 Life in the Open Ocean The Biology of Pelagic Species provides in depth coverage of the different marine animal groups that form the communities inhabiting the ocean's pelagic realm. This comprehensive resource explores the physical environment, foraging strategies, energetics, locomotion, sensory mechanisms, global and vertical distributions, special adaptations and other characteristics of a wide array of marine taxa. Bringing together the most recent information available in a single volume, authors Joseph J. Torres and Thomas G. Bailey cover the Cnidaria, stinging jellies, the ctenophores, comb jellies, pelagic nemerteans, pelagic annelids, crustaceans, cephalopods and pelagic gastropods, invertebrate chordates as well as micronekton and larger fishes such as sharks, tunas, mackerels and mahi mahi. Detailed chapters on each pelagic group describe internal and external anatomy, classification and history, feeding and digestion, bioluminescent systems and their function, reproduction and development, respiration, excretion, nervous systems and more. The first book of its kind to address all of the major animal groups comprising both the swimmers and drifters of the open sea, this important resource explains how different animals have adapted to live in the open ocean environment. Covers all sensory mechanisms of animals living in the pelagic habitat including photoreception, mechanoreception and chemoreception. Treats the diverse micronekton.

assemblage as a community Includes a thorough introduction to the physical oceanography and properties of water in the pelagic realm Life in the Open Ocean The Biology of Pelagic Species is an excellent senior level undergraduate and graduate textbook for courses in biology and biological oceanography and a valuable reference for all those with interest in open ocean biology

Fish Karyotypes Ryoichi Arai, 2011-06-26 As the largest group of extant vertebrates fish offer an almost limitless number of striking examples of evolutionary adaptation to environmental and biotic selection pressure The most diverse of all vertebrate groups the higher taxa of fish traditionally have been classified by morphology and paleontology with a much smaller input of cytogenetic information DNA sequence data are exerting an increasingly strong influence on modern fish systematics challenging the classification of numerous higher taxa ranging from genera to orders The most fruitful approach however involves synthetic analyses of morphology molecular phylogenetics comparative karyology and genome size Karyotypes of more than 3400 species subspecies are arranged here by fish systematics and include a list of genome size sex chromosomes B chromosomes polyploidy and locality of material fish among others This volume enables both beginners and advanced researchers to survey the existing literature and facilitates the implementation of an integrative approach to fish systematics The first book on fish chromosomes in nearly 15 years it is also the most comprehensive

Animal Conflict Felicity A. Huntingford, 2013-03-07 In the past twenty years there have been many new developments in the study of animal behaviour for example more sophisticated methods of neurophysiology more precise techniques for assessing hormonal levels more accurate methods for studying animals in the wild and on the functional side the growth of behavioural ecology with its use of optimality theory and game theory In addition there has been a burgeoning number of studies on a wide range of species The study of aggression has benefited greatly from these developments this is reflected in the appearance of a number of specialized texts both on behavioural ecology and on physiology and genetics However these books have often been collections of papers by specialists for specialists No one book brings together for the non specialist all the diverse aspects of aggression including behavioural ecology genetics development evolution and neurophysiology Neither has there been a comparative survey dealing with all these aspects Therefore one of our aims in writing this book was to fill in these gaps Another of our aims was to put

aggression into context with respect to other aspects of an animal's lifestyle and in particular to other ways in which animals deal with conflicts of interest Aggressive behaviour does not occur in a biological vacuum It both influences and is influenced by the animal's ecological and social environment so we consider both the complex antecedent conditions in which aggressive behaviour occurs and its ramifying consequences in the ecosystem

Practical Studies of Animal

Development F. S. Billett, 2012-12-06 The purpose of this book is twofold it is meant to serve both as a practical manual for the study of animal development and as a general introduction to the subject Central to our endeavour is the belief that developmental biology is best taught and learnt at the laboratory bench with specimens which are either alive and can be seen to develop or with fresh material derived directly from the egg as in birds or mother as in mammals Once the dynamic nature of development is appreciated and the overall structure of the developing organism discerned the more conventional study of sections and whole mounts is more likely to become a delight rather than a difficult and often meaningless chore We have laid considerable stress on the early development of animal embryos and the ways in which they can be obtained from a relatively few but reliable sources In addition emphasis has been placed on fairly simple experiments which make use of the embryos and larvae chosen for the purpose of illustrating development Embryology ceased to be a descriptive science at the beginning of this century and any practical course at whatever level should attempt to reflect this change It is true that the analysis of development particularly the genesis of chorionic structure owed much to the invention of the microtome

The Study of Animal Behaviour

Felicity Huntingford, 2012-12-06 The aim of this book is to identify the main areas of active discussion about and research into the biology of animal behaviour to describe and assess ways in which these can be studied and using selected examples to illustrate the kinds of results which are emerging It is not intended to provide an exhaustive review of all we know about animal behaviour although the examples have been chosen to cover as many as possible of the things that animals do XIV Preface Acknowledgements I would like to thank C Swann M L N Murthy and the Superbrain for typing the manuscript Linda Partridge Pat Monaghan Douglas Fraser and Richard Wilson for constructive criticism of earlier drafts Alan Crowden for help in planning and producing the book and particularly Tim Huntingford for help and encouragement at all stages of its production Acknowledgements are gratefully made to Jim Tulley for producing plates 1 2 3 7 and 12 and to Michael Hansell for the remainder
