Sochen, Joachim Weickert, 2005-04-07 Welcome to the proceedings of the 5th International Conference on Scale Space and PDE Methods in Computer Vision The scale space concept was introduced by Iijima more than 40 years ago and became popular later on through the works of Witkin and Koenderink It is at the junction of three major schools of thought in image processing and computer vision the design of Iijima's axiomatic approaches based on partial differential equations PDEs and variational methods for image regularization Scale space ideas belong to the mathematically best understood approaches in image analysis They have entered numerous successful applications in medical imaging and a number of other fields where they often give results of very high quality This conference followed biennial meetings held in Utrecht Corfu Vancouver and Skye It took place in a little castle Schlösschen Schönburg near the small town of Hofgeismar Germany Inspired by the very successful previous meeting at Skye we kept the style of gathering people in a slightly remote and scenic place in order to encourage many fruitful discussions during the day and in the evening

We received 79 full paper submissions of a high standard that is characteristic for the scale space conferences Each paper was reviewed by three experts from the Program Committee sometimes helped by additional reviewers Based on the results of these reviews 53 papers were accepted We selected 24 manuscripts for oral presentation and 29 for poster presentation
