Scenario A. O. Hamilton,1974 **Selected Works of Merton H. Miller: A Celebration of Markets: Volume 1**

Merton H. Miller,2002-06 Widely regarded as one of the founders of modern corporate finance Merton H Miller was awarded a Nobel Prize in 1990 for his work in the theory of finance and financial economics Selected Works of Merton H Miller gathers together in two volumes a selection of Miller s most influential contributions over more than fifty years of active research A common theme running throughout both volumes is Miller s conviction about the utility of market based approaches to topics as diverse as dividend policy bank regulation the structure of securities markets and competition between research universities and teaching colleges Miller was perhaps best known for a series of highly influential papers he cowrote in the 1950s and 1960s with fellow Nobel laureate Franco Modigliani that advanced a set of capital structure theorems later dubbed the M and M propositions In brief the M and M propositions state that the actions of investors firms and capital markets will cause the market value of a firm to be independent of its capital structure In other words a corporation s value depends on its investments in people ideas and physical capital goods and not on the mix of bonds stocks and other securities used to finance the investments Four of these papers are reprinted here together with important later work by Miller in macroeconomics corporate capital structure management science asset pricing and the economic and regulatory problems of the financial services industry Diverse and innovative the papers in Selected Works of Merton H Miller will interest students and practitioners of economics finance and business as well as policymakers responsible for market regulation Proclamation! in numerical analysis newton s method also known as the newton raphson method named after isaac newton and joseph raphson is a root finding algorithm which produces successively better approximations to the roots or zeroes of a real valued function the most basic version starts with a single variable function f defined for a real variable x the function s derivative f'

and an initial guess x_0 for a root of f if the function satisfies sufficient assumptions and the initial guess is close
