Schizotypal Personality:

Schizotypal Personality Adrian Raine, Todd Lencz, Sarnoff A. Mednick, 1995-09-29 This book is devoted to schizotypal personality. It provides a comprehensive overview of our knowledge from some of the world's leading researchers in the field and includes reviews of genetics, neurodevelopment, assessment, psychophysiology, neuropsychology, and brain imaging. Central themes are the exploration of categorical and dimensional approaches to the understanding of schizotypal disorder and its relationship to schizophrenia. Valuable introductory and concluding chapters set in context the sometimes divergent opinions and findings presented by the book's contributors and there are reviews of methodological issues and assessment schedules for the benefit of researchers in the field. In setting out to answer from phenomenological, psychological, and neurobiological perspectives the fundamental question: What is schizotypal disorder and to develop coherent etiological models, this book will serve as an authoritative resource for clinicians and researchers interested in this major personality disorder.

Kaplan & Sadock's Concise Textbook of Clinical Psychiatry Benjamin J. Sadock, Virginia A. The Psychopathology of Crime Adrian Raine, 1993 This lauded bestseller now available in paperback takes an uncompromising look at how we define psychopathology and makes the argument that criminal behavior can and perhaps should be considered a disorder. Presenting sociological, genetic, neurochemical, brain imaging, and psychophysiological evidence, it discusses the basis for criminal behavior and suggests, contrary to popular belief, that such behavior may be more biologically determined than previously thought. Presents a new conceptual approach to understanding crime as a disorder. Provides the most extensive review of biological predispositions to criminal behavior to date. Presents the practical implications of viewing crime as a psychopathology in the contexts of free will, punishment, treatment, and future biosocial research. Includes numerous tables and figures throughout. Contains an extensive reference list. Analyzes the familial and extra-familial causes of crime. Reviews the predispositions to crime including evolution and genetics and the neuropsychological, psychophysiological, brain imaging, neurochemical, and cognitive factors.
