Psychological Testing Robert M. Kaplan,Dennis P. Saccuzzo,1993 This accessible and engaging book for undergraduates is less cluttered with details than other books for the course and students like to read it It offers an up to date analysis of the most widely used tests in educational industrial clinical and health settings The Third Edition features a significant increase in the number of test profiles sample items and figures while it addresses timely and controversial topics such as nationalized testing test bias and cross cultural issues Kaplan and Saccuzzo cover the technical principles of test evaluation and construction in a concise comprehensible manner using practical examples from real life Assuming no theoretical background and little knowledge of statistics the book provides thorough coverage of basic statistical concepts while ensuring an understanding of important principles **Basic Group Processes** P. B. Paulus,2012-12-06 Research on groups has been a major focus of concern among psychologists and sociologists for many years The study of groups certainly deserves a central role in these disciplines since much of our behavior occurs in groups and many important social phenomena involve groups Issues such as leadership conformity group decision making group task performance and coalition formation have had a long history of research However recently a number of other areas of research have blossomed that provide interesting new perspectives on group processes e g social impact In addition topics of research have developed outside the commonly ac cepted domain of group dynamics e g self disclosure which seem to be concerned with rather basic group processes Basic Group Processes was designed to bring together in one volume a repre sentative sample of the broad range of work currently being done in the area of groups Some of the chapters provide a review of the literature while others

focus more specifically on current programs of research All however provide new insights into basic group processes and a number provide broad integrative schemes All of the authors were asked to emphasize theoretical issues rather than a detailed presentation of research Basic Group Processes suggests that research on groups is a lively enterprise and forging interesting new theoretical and empirical directions

Tests in Print Oscar Krisen Buros,1983 *Proceedings of the ... ETS Invitational Conference* ,1978 *Gender and Fair Assessment* Warren W. Willingham,Nancy S. Cole,2013-12-16 There have been many important changes in the participation of women and men in American society over the past quarter century Tests play a role in those changes by providing evidence of the diverse achievement and proficiency of women and men They aid the learning process and reflect inequalities in opportunity to learn and participate In addition they provide useful information in considering what alternatives in education and work make most sense for individuals and influence views about groups of students educational programs and a wide range of issues For all of these reasons it is important that tests assess fairly and reflect accurately the ways young people are and are not achieving as well as desired The test performance of women and men is a research topic of historical interest and has received much attention in recent years Because of this increased interest there is a great deal of new research and data available The purpose of the study presented in this volume was to review this new information with two objectives in mind to clarify patterns of gender difference and similarity in test performance and related achievements and to see what implications those findings might have for fair assessment and as a corollary examine the assessment process as a possible source of gender differences This study is interested in tests used in education to assess developed knowledge and skill In order to gain a broader view of gender similarity and difference the contributors looked at other types of measures and other characteristics of young women and men Their hope is to contribute to a firmer basis for insuring fairness in tests an objective which is particularly important as the field moves increasingly to new forms of assessment in which there is less experience

Principles of Educational and Psychological Testing Frederick Gramm Brown,1983 Admissions Testing and the Public Interest William Benton Schrader,1981 **Economics of Education** George Psacharopoulos,2014-05-17 Economics of Education Research and Studies reviews key topics in the field of economics of education since 1960s This book is organized into 12 parts Part I and Part II focus on the supply side of human capital and narrower aspects of human capital creation by means of education Subsequent parts look at the benefits of education relationship between education and employment controversies in the field of economics of education issues of manpower planning and methodology for empirically analyzing the issues in the economics of education The last two parts address the costs of education with emphasis on cost function analysis and on the financing of education Making Schools Work Eric A. Hanushek,2010-12-01 Educational reform is a big business in the United States Parents educators and policymakers generally agree that something must be done to improve schools but the consensus ends there The myriad of reform documents and policy discussions that have appeared over the past decade have

not helped to pinpoint exactly what should be done The case for investment in education is an economic one schooling improves the productivity and earnings of individuals and promotes stronger economic growth and better functioning of society Recent trends in schooling have however lessened the value of society's investments as costs have risen dramatically while student performance has stayed flat or even fallen The task is to improve performance while controlling costs This book is the culmination of extensive discussions among a panel of economists led by Eric Hanushek They conclude that economic considerations have been entirely absent from the development of educational policies and that economic reality is sorely needed in discussions of new policies The book outlines an improvement plan that emphasizes changing incentives in schools and gathering information about effective approaches Available research and analysis demonstrates that current central decisionmaking has worked poorly Concentrating on inputs such as pupil teacher ratios or teacher graduate degrees appears quite inferior to systems that directly reward performance Nonetheless since experience with such alternatives is very limited a program of extensive evaluation appears to be in order Attempts to institute radical change on the basis of currently available information involve substantial risks of failure Many people today find proposals such as charter schools expanded use of merit pay or educational vouchers to be appealing Yet there is little evidence of their effectiveness and widespread adoption of these proposals is sure to run into substantial problems of im

Aging and Cognitive Processes Fergus Craik, 2012-12-06 For a variety of reasons there has been an explosion of interest in research on aging over the past few years The reasons include an awareness that a large and growing proportion of our population is over 65 and that research findings can contribute to their health satisfaction and efficiency as members of society the fact that funding agencies have endorsed the need for more research effort in the area by setting up special programs and also the fact that researchers themselves are turning more to practical problems as many theoretical issues in experimental psychology at least seem to remain as intractable as ever Thus at present there is widespread interest in aging but there is also a lack of knowledge as to what has already been accomplished in the area what the theoretical issues are and what factors contribute to the methodological and practical difficulties The time is propitious for meetings of experts in various aspects of the aging process both to discuss among themselves latest advances in the field and also to integrate known information for researchers and practitioners In the summer of 1980 we organized such a meeting as the 10th annual psychology symposium to be held at the Erindale Campus of the University of Toronto The topic chosen was Aging and Cognitive Processes and the edited contributions to the symposium form the chapters of the present book
