**Selected Papers of Norbert Wiener** Norbert Wiener, *Selected Papers of Norbert Wiener* Y. M. Lee, Norbert Wiener, Norman Levinson, W. T. Martin, 1965-03-15 **Selected Papers of Norbert Wiener, Including Generalized Harmonic Analysis and Tauberian Theorems** Norbert Wiener, 1965 Teils., Engl. Selected Papers of Norbert Wiener Including Generalized Harmonic Analysis and Tauberian Theorems Norbert Wiener, 1964 **SELECTED PAPERS OF NORBERT WIENER INCL. GENERALIZED HARMONIC ANALYSIS AND TAUBER**, **Selected papers. 2 (1986)**

Shizuo Kakutani, Robert R. Kallman, 1986 Works of Shizuo Kakutani Japanese American mathematician best known for his eponymous fixed point theorem **Selected Papers of Norman Levinson** J.A. Nohel, D.H. Sattinger, Gian-Carlo Rota, 1997-12-18 The deep and original ideas of Norman Levinson have had a lasting impact on fields as diverse as differential integral equations harmonic complex stochastic analysis and analytic number theory during more than half a century Yet the extent of his contributions has not always been fully recognized in the mathematics community For example the horseshoe mapping constructed by Stephen Smale in 1960 played a central role in the development of the modern theory of dynamical systems and chaos The horseshoe map was directly stimulated by Levinson's research on forced periodic oscillations of the Van der Pol oscillator and specifically by his seminal work initiated by Cartwright and Littlewood In other topics Levinson provided the foundation for a rigorous theory of singularly perturbed differential equations He also made fundamental contributions to inverse scattering theory by showing the connection between scattering data and spectral data thus relating the famous Gel'fand-Levitan method to the inverse scattering problem for the Schrodinger equation He was the first to analyze and make explicit use of wave functions now widely known as the Jost functions Near the end of his life Levinson returned to research in analytic number theory and made profound progress on the resolution of the Riemann Hypothesis Levinson's papers are typically tightly crafted and masterpieces of brevity and clarity It is our hope that the publication of these selected papers will bring his mathematical ideas to the attention of the larger mathematical community

*Collected Papers of Salomon Bochner* Salomon Bochner, 1992 Collected papers of Salomon Bochner American mathematician known for work in mathematical analysis probability theory and differential geometry **Selected Works of Donald L. Burkholder** Burgess Davis, Renming Song, 2011-02-18 This book chronicles Donald Burkholder's thirty-five year study of martingales and its consequences Here are some of the highlights Pioneering work by Burkholder and Donald Austin on the discrete time martingale square function led to Burkholder and Richard Gundy's proof of inequalities comparing the quadratic variations and maximal functions of continuous martingales inequalities which are now indispensable tools for stochastic analysis Part of their proof showed how novel distributional inequalities between the maximal function and quadratic variation lead to inequalities for certain integrals of functions of these operators The argument used in their proof applies widely and is now called the Burkholder-Gundy good lambda method This uncomplicated and yet extremely elegant

technique which does not involve randomness has become important in many parts of mathematics The continuous martingale inequalities were then used by Burkholder Gundy and Silverstein to prove the converse of an old and celebrated theorem of Hardy and Littlewood This paper transformed the theory of Hardy spaces of analytic functions in the unit disc and extended and completed classical results of Marcinkiewicz concerning norms of conjugate functions and Hilbert transforms While some connections between probability and analytic and harmonic functions had previously been known this single paper persuaded many analysts to learn probability These papers together with Burkholder's study of martingale transforms led to major advances in Banach spaces A simple geometric condition given by Burkholder was shown by Burkholder Terry McConnell and Jean Bourgain to characterize those Banach spaces for which the analog of the Hilbert transform retains important properties of the classical Hilbert transform Techniques involved in Burkholder's usually successful pursuit of best constants in martingale inequalities have become central to extensive recent research into two well known open problems one involving the two dimensional Hilbert transform and its connection to quasiconformal mappings and the other a conjecture in the calculus of variations concerning rank one convex and quasiconvex functions This book includes reprints of many of Burkholder's papers together with two commentaries on his work and its continuing impact

**Dictionary Of Modern American Philosophers** John R. Shook, 2005-05-15 The Dictionary of Modern American Philosophers includes both academic and non academic philosophers and a large number of female and minority thinkers whose work has been neglected It includes those intellectuals involved in the development of psychology pedagogy sociology anthropology education theology political science and several other fields before these disciplines came to be considered distinct from philosophy in the late nineteenth century Each entry contains a short biography of the writer an exposition and analysis of his or her doctrines and ideas a bibliography of writings and suggestions for further reading While all the major post Civil War philosophers are present the most valuable feature of this dictionary is its coverage of a huge range of less well known writers including hundreds of presently obscure thinkers In many cases the Dictionary of Modern American Philosophers offers the first scholarly treatment of the life and work of certain writers This book will be an indispensable reference work for scholars working on almost any aspect of modern American thought

**Applied Mechanics Reviews**, 1967

*Ultrawideband Radar* James D. Taylor, 2017-12-19 Providing a practical review of the latest technology in the field Ultrawideband Radar Applications and Design presents cutting edge advances in theory design and practical applications of ultrawideband UWB radar This book features contributions from an international team of experts to help readers learn about a wide range of UWB topics including History of the technology American and European governmental regulations and key definitions Nonsinusoidal wave propagation theory Random signal radar Object detection by ground permittivity measurements Large target backscattering effects Medical applications Large current radiator antenna design Materials penetrating theory Radar signal processing Weak signal detection methods Holographic and real time radar imaging This

book's contributors use practical information to illustrate the latest theoretical developments and demonstrate UWB radar principles through case studies. Radar system engineers will find ideas for precision electronic sensing systems for use in medical security, industrial construction and geophysical applications as well as those used in archeological, forensic and transportation operations.

**Meaning and the Dynamics of Interpretation** Hans Kamp, 2013-10-17. This selection of research papers written by Hans Kamp presents the core of his scientific research on natural language semantics and its relation to logic, philosophy and linguistics. Arranged in six sections, the topics range from philosophical reflection on the foundational issues in the ancient Sorites Paradox with a formal account of its solution to a detailed account of presuppositions in dynamic semantics. Ranking among the philosophers with great and lasting influence on formal semantics, Hans Kamp contributed early foundational research to core theoretical topics like temporal reference and vagueness, then pushed the boundaries of the discipline in new and productive directions. Showing the importance of non-truth functional aspects of meaning, Discourse Representation Theory proved the value of a dynamic approach to interaction of text and context for our understanding of anaphora, word meaning and context dependence. This collection shows very clearly how Kamp has forged ground-breaking connections among semantics, computation and mental representation, challenging the once dominant Fregean anti-psychologism while demonstrating that the best theoretical research can simultaneously yield important computational applications and novel cognitive insights. Barbara Partee, University of Massachusetts Amherst.

Hans Kamp has been rewarded with the Rolf Schock Prize in 2024.
