Selected Readings in Sociobiology James H. Hunt, 1980 **Sexual Selections** Marlene Zuk, 2002-06-04 Scientific discoveries about the animal kingdom fuel ideological battles on many fronts especially battles about sex and gender We now know that male marmosets help take care of their offspring Is this heartening news for today's stay at home dads Recent studies show that many female birds once thought to be monogamous actually have chicks that are fathered outside the primary breeding pair Does this information spell doom for traditional marriages And bonobo apes take part in female female sexual encounters Does this mean that human homosexuality is natural This highly provocative book clearly shows that these are the wrong kinds of questions to ask about animal behavior Marlene Zuk a respected biologist and a feminist gives an eye opening tour of some of the latest developments in our knowledge of animal sexuality and evolutionary biology Sexual Selections exposes the anthropomorphism and gender politics that have colored our understanding of the natural world and shows how feminism can help move us away from our ideological biases As she tells many amazing stories about animal behavior whether of birds and apes or of rats and cockroaches Zuk takes us to the places where our ideas about nature gender and culture collide Writing in an engaging conversational style she discusses such politically charged topics as motherhood the genetic basis for adultery the female orgasm menstruation and homosexuality She shows how feminism can give us the tools to examine sensitive issues such as these and to enhance our understanding of the natural world if we avoid using research to champion a feminist agenda and avoid using animals as ideological weapons Zuk passionately asks us to learn to see the animal world on its own terms with its splendid array of diversity and variation This knowledge will give us a better understanding of animals and can ultimately change our assumptions about what is natural normal and even possible

Human Nature and Biocultural Evolution Joseph Lopreato, 2024-12-02 First published in 1984 Human Nature and Biocultural Evolution aims to delineate a theory of human nature viewed as an interrelated set of genetically programmed behavioral predispositions and a theory of biocultural evolution The author's approach is based on the hypothesis that innate predispositions and cultural environmental factors cooperate to determine human behavior and socio cultural forms Professor Lopreato begins by tracing the development of evolutionary biology up to sociobiology It is his argument that the social and biological disciplines have for over a century been moving towards a synthesis and that Homo sapiens is neither just another animal nor so unique a being that culture has become divorced from its genetic underpinnings The argument is supported with evidence from evolutionary biology and social science with a critical discussion of basic issues of behavioral science and with an analysis of certain famous theories in social science e g theories of suicide anomie capitalism which prove to be richer and more complete when viewed from a biocultural perspective The theory of human nature is arrived at through a rich analysis of ethnographic psychological and sociological arguments and data as well as facts and theories from comparative zoology In the process the author treats critically numerous theoretical problems associated with topics such as

exploitation class consciousness structured inequality reciprocal behavior territorial aggression religious ritual socialization ethnicity and prejudice The author concludes with an examination of behavioral predispositions that are hypothesized to be at the base of cultural variation
