Department of Operations Research and Administrative Sciences,1972 **Selected Methods and Models in Military Operations Research** Peter W. Zehna,2005 The growth of operations research during the past several years has been phenomenal Throughout its evolution military problems have continually nourished the subject matter and provided interesting sources of research for its further development As a consequence military research organizations such as the Office of Naval Research have historically furnished the major support for work on the basic foundations of mathematics and management science necessary to the continued growth of operations research Beginning with one or two basic textbooks in the early 1950 s most of the tools and techniques of this field have been found in specialized textbooks and the open literature Recently several new and comprehensive textbooks became available for the classroom training of operations researchers at all levels This is not surprising since separate departments of operations research have been formed at various colleges and universities and now provide an opportunity for major study in this field at both the undergraduate and graduate levels By and large the textbooks now available are not particularly oriented toward military applications and a need for such a book appears to exist This book has been written with a view toward filling that need Its main purpose is to provide orientation for the practitioner who is interested in problem areas that have direct bearing on military applications It is not a basic textbook designed to train an operations researcher in a comprehensive fashion although certainly some of the material is amenable to classroom use On the other hand it is not a collection of isolated research papers Rather as the title indicates it is an illustration of the basic tools and techniques used in solving certain problems of a military nature and application Several areas have been explored in some detail although certainly not every conceivable application or area is covered Also some applications are presented in terms that are broader than a specific military use The coordinating theme of the book is the exploitation of mathematical models in the investigation of problems For this reason the book begins with an extensive discussion of the various aspects of a mathematical model and its role in operations research A case is made for the place of abstraction in the study of models and is illustrated with the simpler aspects of a Boolean algebra Following this a rather comprehensive survey of probability and statistics is provided emphasizing those points that are particularly significant for studying models The book then proceeds through a variety of models from very specialized problems through search theory simulation and finally inventory and reliability models It then closes with a broad discussion of systems analysis *Handbook of Military Industrial Engineering* Adedeji B. Forecasting in Military Affairs Юрий Васильевич Чуев, Юрий Борисович Михайлов, 1980 The book provides a rather broad review on an international scale of recent thinking on the subject of scientific planning forecasting and decisionmaking as it relates to the military The scientific approach to these matters is observed to be highly essential in an age in which scientific and technical development gives rise to rapid changes in weapons and techniques The results of the use of nuclear weapons are likely to be such as to deny decisionmakers the luxury approach to their task Scientific forecasting is proposed as a means of ensuring the rapid production of soundly based information on which to make proper decisions in military affairs It is not put forth as a substitute for the thinking of talented and experienced military experts but as a means for them to achieve their decisions in a more timely and scientific manner The authors employ a mathematical statistical approach in arriving at their hypothetical forecasts and particularly because of the numerous examples of forecasting situations to which these techniques are applied those involved or interested in the activity should be able to confirm their understanding of the methods of arrival at the various conclusions **Forecasting in Military Affairs** Jurij Vasil'evic Cuev, 1975
