Selected Papers of Kun Huang Kun Huang, Bang-fen Zhu, 2000 Professor Kun Huang is widely known for his collaboration with Max Born in writing the classic monograph *Dynamical Theory of Crystal Lattices* During his years of active research he has made many important contributions to solid state physics The present collection of papers is selected at his own choice as representing his most influential works Thus one finds included his pioneering work on the interaction of radiation field with polar lattices and the resulting coupled vibration modes later known as polariton the systematic development of his theory of radiative and nonradiative multiphonon transition processes associated with lattice relaxation his early prediction of diffuse X ray scattering due to crystal defects and his recent research works on low dimensional semiconductor structures etc Professor Huang has found by his experience that scientists interested in these

papers often want to know more particulars underlying the research work background motivation and rationale involved etc Thus he was led to write a commentary which is published alongside the papers *Selected Papers Of J Robert Schrieffer In Celebration Of His 70th Birthday* Nicholas E Bonesteel, Lev P Gor'kov, 2002-11-25 This invaluable book is a selection of papers by theoretical physicist and Nobel laureate J Robert Schrieffer In addition to his Nobel Prize winning work in superconductivity Prof Schrieffer has made significant contributions to a wide variety of topics in condensed matter physics These include the theory of soliton excitations in polyacetylene a clear example of spin charge separation in a condensed matter system paramagnon theory magnetic impurities the physics of surfaces high T_c superconductivity and the fractional quantum Hall effect The papers are reviewed and placed in context by leading experts The guest contributors are A Alexandrov on electrons and phonons T Einstein on surfaces S Kivelson on quantum Hall effect D Scalapino on the BCS theory of superconductivity F Wilczek on solitons and fractional quantum numbers J W Wilkins on magnetic impurities and S C Zhang on high T_c superconductivity Spectroscopy With Coherent Radiation: Selected Papers Of Norman F Ramsey (With Commentary) Norman F Ramsey, 1998-06-04 This invaluable volume contains a biography of Nobel laureate Norman F Ramsey as well as reprints and retrospective commentaries on 56 papers relating to spectroscopy with coherent radiation The earliest papers describe his work with I I Rabi developing the then new magnetic resonance method and its uses to measure magnetic moments of the different forms of hydrogen and to discover the deuteron electric quadrupole moment Later papers include his invention of the method of coherent separated oscillatory fields the development of the atomic hydrogen maser and the uses of these methods to measure properties of nucleons nuclei atoms and molecules and to test parity and time reversal symmetries Other papers present the first successful theories of nuclear magnetic shielding NMR chemical shifts electron coupled nuclear spin spin interactions and negative absolute temperatures **Sammlung** Alberto Giovannini, 2000 This important volume describes the wide ranging scientific activities of L on Van Hove through commentaries by his colleagues and a selection of his most influential papers and documents The reprinted papers are grouped by topic starting from his early work in mathematics and theoretical and statistical physics up to his very last contributions in elementary particle physics and multiparticle dynamics Van Hove's career as teacher director and science advisor in many European institutions is presented in sketches by friends and coworkers A selection of his speeches and documented thoughts on science completes the volume **Subnuclear Physics, the First 50 Years: Highlights From Erice To Eln** O Barnabei, P Pupillo, Fabio Roversi Monaco, Antonino Zichichi, 2000-08-04 For the Galvani Bicentenary Celebrations the University of Bologna and its Academy of Sciences singled out subnuclear physics as the field of scientific research to be associated with this important event as it would best illustrate for the new generation of students the challenge inherent in fundamental sciences Subnuclear physics was born 50 years ago and has represented ever since the new frontiers of Galilean science In his opening lecture delivered on the first day of the new academic year Professor

Antonino Zichichi analytically reviewed the basic conceptual developments and main discoveries achieved in subnuclear physics during the last 50 years. Given the importance of this field of fundamental research, Professor Zichichi was invited to expand the contents of his lecture into a book, and the outcome is this invaluable volume. *Selected Scientific Papers of Sir Rudolf Peierls* (Rudolf Ernst Peierls, 1997). This book is a collection of the major scientific papers of Sir Rudolf Peierls (1907–95), including the Peierls-Frisch Memoranda of 1940 on the feasibility and the predicted human effects of an atomic bomb made of uranium-235. His papers range widely in topic. They include much on the fundamentals of solid state physics: the thermal and electric conductivity of materials as a function of temperature T , especially $T \rightarrow 0$; the interpretation of the de Haas-van Alphen effect observed for a metal in a magnetic field and the basics of transport theory. Many are on problems in statistical mechanics, including his constructive paper demonstrating the existence of a phase transition for Ising's model for a two-dimensional ferromagnet. In nuclear physics, they include the first calculations with Bethe on the photo-disintegration of the deuteron, made in response to a challenge by Chadwick; the Kapur-Peierls theory of resonance phenomena in nuclear reactions; the Bohr-Peierls-Placzek continuum model for complex nuclei, which first explained the narrow resonances observed for low-energy neutrons incident on very heavy nuclei; and the Peierls-Thouless variational approach to collective phenomena in nuclei. Several of Peierls's wartime papers, now declassified, are here published for the first time. Brief commentaries on most of the papers in this book were added by Peierls to indicate subsequent developments and their relationship with other work, or to correct errors found later on. A complete bibliography of his writings is given as an appendix.

Selected Papers of Richard Feynman (With Commentary) (Laurie M. Brown, 2000-10-25). These scientific papers of Richard Feynman are renowned for their brilliant content and the author's striking original style. They are grouped by topic: path integral approach to the foundations of quantum mechanics and quantum field theory; renormalized quantum electrodynamics; theory of superfluid liquid helium; theory of the Fermi interaction; polarons; gravitation; partons; computer theory, etc. Comments on Feynman's topics are provided by the editor, together with biographical notes and a complete bibliography of Feynman's publications.

Creation of Quantum Chromodynamics and The Effective Energy, The: In Honour of A. Zichichi On The Occasion of The Galvani Bicentenary Celebrations (L. N. Lipatov, Gabriele Veneziano, Gerard 't Hooft, Vladimir N. Gribov, Victor F. Weisskopf, 2001-01-03). UNDER THE SPELL OF THE GAUGE PRINCIPLE, by G. 't Hooft. The University of Bologna and its Academy of Sciences, in collaboration with the Italian National Institute for Nuclear Physics and the Italian Physical Society, celebrated in 1998 the bicentenary of a great pioneer in the field of electric phenomena: Luigi Galvani, the father of macroelectricity. During these two centuries, the physics of electric phenomena has given rise first to the Maxwell equations, then to quantum electrodynamics, and finally to the synthesis of all reproducible phenomena: the Standard Model. A cornerstone of the Standard Model is quantum chromodynamics (QCD), which describes the interaction between quarks and gluons in the innermost part of the structure of matter. The discovery of QCD will be recalled in the future as one

of the greatest achievements of mankind Many physicists the world over have contributed to its creation on both the experimental and the theoretical front Professor Antonino Zichichi has played an important role in this scientific venture as documented by his works which are reproduced in this invaluable volume One of the founders of European physics Professor Victor F Weisskopf contributes with his memories of the time when QCD had many problems This volume owes its existence to a founding father of QCD Professor Vladimir N Gribov whose sudden demise prevented him from directly contributing to its final edition Two world leaders in subnuclear theoretical physics Professors Gerardus t Hooft and Gabriele Veneziano illustrate the significance of the contributions of Antonino Zichichi in QCD

Spectroscopy with Coherent Radiation

Albrecht Wagner, Horst Wenninger, Bjorn H Wiik, 2002-12-24 In the year 2000 the city of Bologna was the European Capital for Culture For this reason the University of Bologna and its Academy of Sciences following the Guglielmo Marconi Centenary and the Luigi Galvani Bicentenary Celebrations decided to call attention to the major achievements of their most distinguished members in science and technology This invaluable volume presents a series of inventions and technological developments some thought of and directly implemented by Professor Antonino Zichichi others suggested and developed under his leadership all of them having contributed to the discovery of new particles and new phenomena in the field of subnuclear physics The book was conceived by an eminent scientist Professor Dr Bjorn H Wiik Director of Germany's most prestigious physics laboratory DESY Hamburg It would not be published were it not for Professor Dr Albrecht Wagner Chairman of the DESY Board of Directors and Dr Horst Wenninger from CERN Geneva the greatest European physics laboratory

The Origin of the Third Family

O. Barnabei, 1998 This volume has two main components reports and testimonies Both will allow the reader to know how this new field of physics was opened how it gave rise to new technological developments now still of great value for electron and muon detection and how much work was needed for the peculiar symmetry to be so short lived

A Quantum Legacy Julian Schwinger, 2000 Julian Schwinger 1918-94 contributed

to a broad range of topics in theoretical physics from classical electrodynamics to quantum mechanics This volume includes many of his most important papers

The Bethe-Peierls Correspondence Sabine Lee, 2008 This book contains the

correspondence between Hans Bethe and Rudolf Peierls two first rate scientists who made important contributions to 20th century physics The document collection is of great significance for our understanding of 20th century physics but it also illustrates many interesting political and social aspects such as the life of r migr r scientists from Nazi Germany on both sides of the Atlantic and the political activities of nuclear scientists after the development of the atomic bomb Furthermore the letters exchanged between Bethe and Peierls facilitate the appreciation of information transfer between Europe and the US and they shed light on mechanisms of higher education and academic research Spanning almost seven decades this almost uninterrupted correspondence is a unique source of 20th century hist

History of Shock Waves, Explosions and Impact Peter O. K. Krehl,2008-09-24 This unique and encyclopedic reference work describes the evolution of the physics of modern shock wave and detonation from the earlier and classical percussion The history of this complex process is first reviewed in a general survey Subsequently the subject is treated in more detail and the book is richly illustrated in the form of a picture gallery This book is ideal for everyone professionally interested in shock wave phenomena
